NATIONAL SURVEY OF BUILDING TRADES WAGES ISSUED

Chicago Builders' Association Puts Out Valuable Data

The annual schedule of rates of wages paid to mechanics and laborers in the building industry in 1928, issued by the Builders Association of Chicago, is now being distributed to Associations and Contractors throughout the country. It contains some very interesting information for the building contractor and the building public as to rates of wages.

This annual compilation of wages has been issued by E. M. Craig, Secretary of the Building Construction Employers' Association and the Builders Association, for more than a quarter of a century. The first issued being dated in 1902. No wage rates were issued in 1903 and 1905, but since the latter year the Wage Scale has been issued monthly.

Before the United States Government began collecting wage data in the building industry, the Chicago Wage Scale was used and published in all government industrial documents and has since become recognized semi-officially as containing the most authentic figures regarding wages in the building industry in the United States.

During the past twenty years railroads and other corporations have made requests for previous issues for the purpose of research work and revaluation in costs of construction as compared with the present rates. Many Associations of Contractors throughout the country have each issue of the Wage Scale framed and placed in their offices for reference by contractors. So much so, that annually numerous requests are made as to when the issue will be ready for distribution.

The 1928 scale comprises the wages paid in 115 of the principal cities of the United States and Canada. The print for the past fifteen years has always been the same size and will continued to be so in order that contractors may keep it in the same frame from year to year.

In New York City, common laborers were raised from \$.90¾ to \$.93¼; while on the other hand, the slate and tile roofers wages decreased from \$1.68¼ to \$1.63¾.

In Detroit among the basic trades, plumbers were raised from \$1.37½ to \$1.50; carpenters from \$1.10 to \$1.25 an hour.

In Los Angeles, more or less open shop, bricklayers rate was increased from \$1.00 to \$1.37½; plasterers, \$1.37½ to \$1.50; sheet metal workers from \$.87½ to \$1.00 and \$1.12½.

In Cleveland, asbestos workers increased from \$1.25 to \$1.37½; bricklayers from \$1.50 to \$1.62½; cement finishers from \$1.25 to \$1.37½; hoisting engineers from \$1.30 to \$1.37½; slate and tile roofers from \$1.50 to \$1.62½.

In New Orleans there were several reductions. Cement Finishers in 1927 received \$1.05 an hour and 1928, \$1.00 an hour. Composition roofers dropped to \$.40 an hour.

Pittsburgh reports one increase, that of the asbestos workers from \$1.43¼ to \$1.50 an hour.

San Francisco, another more or less open shop town, shows several decreases. Hoisting engineers, \$1.06½ to \$1.00; metal lathers\$1.25 to \$1.06½; sprinkler fitters from \$1.25 to \$1.00.

In St. Louis, asbestos workers receive \$1.37½ now as against \$1.31¼ in 1927; sprinkler fitters were raised from \$1.12½ to \$1.37½. Gasfitters wages declined from \$1.50 to \$1.25 an hour.

Dallas, Texas, shows a reduction. Cement finishers from \$1.25 to \$1.00; electrical workers from \$1.25 to \$1.12½; structural iron workers from \$1.50 to \$1.25 to \$1.12½.

From the remote city of Asheville, N. C., comes the news that the bricklayers, plasterers and carpenters have voluntarily voted to reduce their wages in the hope of stimulating more building. The bricklayers and plasterers cut their wages from \$11.00 to \$9.00 a day and the carpenters from \$8.00 to \$7.00 a day.

As an evidence that wages in the building industry are and have been stabilized for the past year or more, the 1928 Survey shows only a few increases being granted. In Chicago the increases granted were practically made in 1927 and carried over until 1929 when the Arbitration Board meets to set the wage rate for that year.

In Chicago the asbestos workers wages were increased from \$1.56¼ to \$1.62½ per hour. This being the highest rate paid that trade in the United States. In New York City and Pittsburgh they receive \$1.50 per hour, while in most other cities the rate averages \$1.25 per hour.

Bricklayers receive a \$1.62½ per hour. In New York City they have a fixed rate of \$1.75 per hour. Most all of the big cities pay \$1.62½ per hour with smaller cities paying the rate of 51.50. The lowest rate paid is \$1.25, which is shown to be in San Diego, Cal.

The Carpenters, according to the Survey, are not as fortunate as are some of their other sister trades. The highest rate paid in any city being \$1.50 per hour with Chicago, New York, St. Louis and Pittsburgh leading the van. Mostly all of the larger cities pay \$1.25 per hour, the smaller cities paying the rate of \$1.50. The lowest South pay the lowest rate. In Atlanta the rate is \$.70 per hour; Savannah \$.75 per hour and New Orleans \$.90 per hour.

The Plasterers appear to be one trade who are able to convince contractors and the building public that their wages should be higher than any other trade. Of the 115 cities listed in the Survey, there is only one city paying \$1.00 an hour, nine cities pay the rate of \$1.75 per hour, twenty cities pay \$1.62 per hour, four cities pay \$1.56¼ per hour and twenty-two cities pay \$1.50 per hour.

Chicago and Gary, Indiana, share a union as top-notchers in the wage rate paid to electricians. The rate being \$1.62½ per hour. Cleveland, St. Louis, Pittsburgh and New York being able apparently to keep the rate at \$1.50 per hour. In other large cities they run from \$1.00 to \$1.37½ per hour, with Oshkosh, Wisconsin, quoted as paying the low rate of \$.75 per hour. Duluth and Fall River, Mass., paying \$.95 per hour.

Plumbers in Chicago, with Dallas, Texas, are paid the rate of \$1.62½ per hour. Other big cities obtain the services of plumbers for an average of \$1.50 per hour. The general average in the smaller cities appears to be \$1.12½. In Montreal the rate is \$.85, while in Richmond, Va., they are paying \$.87½.

New York City tops the list of cities which pay high rates to building laborers. The rate being \$.93¾ per hour while Chicago pays a rate of \$.90 per hour. The

average rate in most cities for laborers appears to be $.45, with many cities paying a much lower rate.. Small cities being able to obtain laborers for $.30 per hour.

The Survey shows that there were but few increases granted and some cities it is noticed made a few decreases not arbitrarily, but actuated by the desire of the building trades mechanics to do something towards stimulating building construction in their respective cities.—(From Buletin of the National Association of Building Trades Employers.)

EVANSVILLE BUILDERS ENDORSE LEGISLATIVE PROPOSALS OF THE STATE BUILDING CONGRESS

Enthusiastic Meeting Held January 2d

A crowd of some seventy builders, architects and contractors, turned out at a special meeting at the Chamber of Commerce, Evansville, Indiana, Wednesday evening, January 2, to hear explained the proposed legislative campaign, sponsored by the Indiana Building Congress.

Details were supplied by Executive Secretary J. H. Owens, Indianapolis, to be followed by a general discussion. At the conclusion of the meeting the Evansville builders voted unanimously to endorse the plan and get behind it in an endeavor to carry it out to a successful conclusion.

INDIANA A. B. C.'S LOSES A STAUNCH ADHERENT

Henry Knauth, Vincennes, Died This Week

The Associated Building Contractors of Indiana suffered a severe loss the past week when Henry Knauth, Vincennes, was taken after a short illness. His passing will be a source of deep and sincere regret to those of the state contractors' association. He was an active worker in that organization and for several years had been a member of the executive board, had also served diligently on various important committees, and was a conspicuous figure at all A. B. C.'s conventions.

The approaching annual gathering of the organization just a few weeks off was held by him to be particularly important, and just recently he was at Indianapolis headquarters talking over preliminary plans and arrangements for the January meeting.

The idea and purpose back of the Indiana Building Congress appealed strongly to him he being an ardent supporter of that body. He was heart and soul for the proposed legislative program and campaign of the Congress, and upon his return home from Indianapolis a special meeting for Vincennes builders for January 3 at which the program and intent was to be set forth. This meeting was called off immediately upon receipt of the word of Mr. Knauth's death January 2.

GEORGE IRMSCHER HEADS FORT WAYNE A. B. C'S., FOR THE COMING YEAR

Association Prepares For a Busy Season in 1929

Having completed an active and successful year of organization effort the members of the Associated Building Contractors held their annual meeting December 28 to review the year's work, jollify and elect officers for the new year. There is much gratification over what the association has done locally and the members are determined to carry on the good work and make the 1929 effort more outstanding than heretofore.

With that end in view these officers, all men tried and proved in organization endeavor were named for the ensuing year:

President—George M. Irmscher.

First Vice-President—Harry Hattersley.

Second Vice-President—William P. Schenkel.

Treasurer—Ed. Oelschlaeger.

Secretary—George W. Schack.

President Irmscher has made the following committee appointments:

Finance and Auditing Committee—M. U. Clark, E. H. Fuhrman, Al Kettler, A. Irmscher.

Membership Committee—Al Weinmann, C. C. Sieb, M. U. Clark, Paul Wehrenberg, O. C. Filler, Clyde Siples, Frank Edmunds.

Arbitration Committee—Harry C. Offut, Theodore Buesching, Otto Gumper, Albert Weinmann, Harry Hattersley.

Publicity Committee—M. U. Clark, Theodore Buesching, W. P. Schenkel, George Irmscher, Harry Hattersley.

Special Work Committee—Albert Wein-

STEADY ACTIVITY OVER LAST HALF OF THE YEAR GAVE INDIANAPOLIS HER BEST BUILDING PERIOD SINCE 1925

Dwellings and Public Structures Turned the Trick

Beginning a new activity back in July building operations at Indianapolis continued brisk clear down to the close of 1928. The last six months of the year, according to statistics compiled by Mrs. Clara Oxley, statistician of the city building inspection department, rolled up a $12,288,535 estimated volume of new building construction. This was $3,887,576 better than the total posted for the last six months of 1927 and enabled the current year's business to exceed by 3.92 per cent that of the previous year.

Every one of the twelve months for 1928 posted individual volumes of new construction work of better than a million dollars, one, May, edged over the three million dollars level and five ran over two millions of dollars. The total figures show the past year to have been the best local building period since 1925 at which time the estimated valuation of new work passed upon amounted to $26,209,855.

As for the work launched in 1928, dwellings led all other types of construction amounting to 29½ per cent of the entire volume. Public structures came next accounting for 24¾ per cent of the new work. Apartment houses ran 13 per cent of the year's building business and business structures took care of 12 per cent.

Here is the story of Indianapolis building in figures for the past two years.

Month	1928 Per.	1928 Est. Val.	1927 Per.	1927 Est Val
January	752	$1,640,824	450	$605,790
February	609	1,093,433	965	2,161,262
March	1030	1,382,419	1365	2,923,664
April	1084	1,908,511	1282	1,884,385
May	1249	3,033,680	1404	2,420,712
June	983	2,321,913	1456	4,078,642
July	931	2,705,970	1165	1,455,994
August	895	2,081,792	1215	2,020,341
September	931	2,041,038	1075	1,445,084
October	985	2,381,980	1218	1,556,574
November	668	1,789,766	859	1,332,196
December	449	1,287,989	522	890,770
TOTAL	10,566	$23,669,315	12,976	$22,775,414

mann, Harry Hattersley, Harry Offut, W. A. Sheets, Oliver Jones.

Secretary George Schack who was re-elected has done yeoman service for the Fort Wayne A. B. C's., for several years past, increased membership each year, kept up interest, arranged special meetings and has not overlooked social features as a means to build up goodfellowship and morale. His retention as secretary shows that the A. B. C's. members are awake to the occasion and are aware of that which has gone a long way to make their association one of the strongest contractors organizations in Indiana.

At present the Fort Wayne A. B. C's. is busy planning for a big meeting January 7, to which architects, general and sub-contractors, material supply men, labor representatives, craftsmen and other allied building interests are to be invited to hear details of the proposed legislative campaign sponsored by the Indiana Building Congress.

FEW KNOW OF BIG BRICK WORK CONTRACT EXECUTED BY INDIANAPOLIS MASON CONTRACTOR

Call and Execution Reflects Credit Upon Indiana

In recounting local building achievements for the year 1928 few have taken into consideration a building performance put on by an Indianapolis brick mason contractor, Walter W. Wise, one of the deans of the industry in the Hoosier Capital City. One reason why the feature has been overlooked is because the effort was exerted in outside territory, beyond the confines of Indiana and covered a wide field. However, because the work was foreign does not lessen the achievement nor should it diminish the gratification that comes at the realization that an Indiana contractor was called in to execute the work involved in a large building construction campaign instituted by a Chicago concern.

Mr. Wise who has been a brick mason contractor for many years, first at LaPorte, Indiana, and for the past twenty-two years at Indianapolis, was commissioned by the Purity Bakeries Corporation, Chicago, early in 1928 to build large bakeries and warehouses in various cities about the country. His operations for the past year included work at Cleveland and Toledo, Ohio, Dallas, Houston and San Antonio, Texas, Newark, New Jersey, and Pittsburg, Pennsylvania. Most of this work is completed or well underway, and more large structures are in contemplation for the immediate future in three other large cities upon which Mr. Wise will start work soon.

Among the projects built in past years at Indianapolis by Mr. Wise's firm are: St. Vincent's Hospital, Murat Theatre, St. Agnes' Academy, many large apartments and several very fine residences of the estate type.

In addition to his active participation in building operations Mr. Wise has been an ardent supporter of organization work among builders. He was formerly president of the Brick-Mason Contractors' Association of Indianapolis, District Vice-President for Indiana for the International Brick Mason Contractors of United States and Canada, Vice-President of the Associated Building Contractors of Indiana, a member of the Advisory Committee to the Administrative Building Council of Indiana, has served numerous times on Arbitration Committees in Labor disputes and in various other ways been in the thick of organization battles. Then, too, he has interested himself in civic moves and not many years ago served as a city councilman at Indianapolis.

Here is a veteran who has won his spurs, and the recognition granted by the awarding to him of the large brick contracts in 1928 reflects credit upon Indiana and Indiana builders. It might be added in this connection and in conclusion that Indianapolis brick foremen have been in charge of the various big jobs in the above mentioned cities.

INDIANAPOLIS GENERAL CONTRACTING FIRM CHANGES NAME AND REINCORPORATES

Harrison Walters, President, Makes Known Recent Change in Firm He Heads

Announcement has been made by Harrison Walters, well-known Indianapolis general contractor, that the firm of which he is president will be known hereafter as the Walters Engineering Company, Inc.

The firm formerly went under the name of Latham & Walters but some time since Charles Latham retired from the organization selling his stock to the other stockholders. Messrs. Latham and Walters became associated in business in April, 1909, and since that time have to their credit many notable construction projects, chief of which are the Indianapolis Union Depot, the State Reformatory at Pendleton, Indiana, the W. J. Holliday Co.'s office and warehouse buildings and the Link-Belt Co.'s factory.

The Walters Engineering Co., Inc., will retain offices at 204 Empire Life Bldg., 215 East New York street, Indianapolis, and continue its operations in the general contracting field following building construction.

ANOTHER SUMMONS SOUNDS FOR AN INDIANA ARCHITECT

W. K. Eldridge, Indianapolis, Passes On

The waning of the old year was the occasion for the stalking of death into the architectural ranks of Indiana to remove, as his victim, one who for many years had engaged in the practice, and who during that time had championed all moves for the advancement of the profession and encouraged that which would make for better building.

Reference is made to the passing of William K. Eldridge who died at his home, 3515 North Pennsylvania street, Indianapolis, December 30, after a short illness.

Originally an engineer, Mr. Eldridge had the distinction of being the first graduate of the Engineering School at Purdue University, Lafayette, Indiana. Later he took up the practice of architecture which he followed to the time of his death.

He served at various times on important committees for the Indiana Engineering Society, the Indiana Society of Architects and the Indianapolis Architects' Association, this in addition to having held offices in each of the above organizations. He was much interested in the modernization of building codes and when such work was in progress continually advised that all codes be made elastic so as to meet current conditions and situations.

He was active in promoting an Engineers' Registration Law for Indiana and was deeply interested in the establishment of the Administrative Building Council through which Standard Building Regulations and Requirements, more or less a State Building Code, have been established.

He was loyal to both the engineering and architectural professions and though of a retiring nature, speaking only when it counted most, did much in his quiet way to build up recognition for both and further those things that he was convinced would redound to the credit of the building industry. His presence and voice will be greatly missed at future engineering and architectural gatherings and councils.

Funeral services were held Wednesday afternoon, January 2, interment following at Crown Hill cemetery, Indianapolis.

DIDN'T KNOW IT WAS LOADED

Upstater Pulled the Wrong Barrel

We are following with correspondence from our friend of the "Berries." In texture it seems to have some resemblance to a nice rough rasp. However, we have a tough and durable outer layer of tissue and can stand lots of this. After printing Mr. Rammel's letter, we are going to answer it.

"Palladio, yer nibs:

"I gotta shout comin, an' yur the goat, unless ya pass it on to sume uv are more sufisticated members. About tha furst uv October I rote ta ya about membership cards. It went over with a bang—likell, likell!

"Awright, hears another! A bunch uv are guys git tagether an' git a bilding code bill passed, wich everyone uv us is got ta live up ta er git are pants kicked. Whatinell is dis bill er code like? We woodn't no it if we saw it. Is tha dam thing so bulky dat tha printers kan't git it out fer a year? I gotta job an' don't no how ta tackle it fer feer sum gizabo tells me my plans is all wet. How c'n a feller member git that dope an' where? Maybe are friend Geo. W. Allen c'n tell us;—he mentions it in the colyum this week.

"Yea! He also said sumpin about regional meetin's. Boy, dey would be good—if we cood on'y have one. Never heard uv eny myself.

"Ya no, Palladio, its downright tough when that committees do sompin reel after wurkin hard for are benefit and we lay down.

"I'm on'y a young squirt, both in yeers an' length uv membership, so I c'n raise 'ell an' yet not be heard. But I hope that Pythias cums along sum time soon an' gathers in a flock uv are members, hocks 'em with Dionysius an' then fergits ta cum back.

"Yers trooly, sincerely, or go ta hell,
W. G. RAMMEL.

"P. S. I moove that we git this guy Billican back with us. He'd stir a mess, an' it woodn't be all chow, either."

What He Brought Down

And here's the answer, paragraph by paragraph, including P. S.

1. Membership cards have been ordered by the Board for next year.

2. The State Building Code has been printed and promulgated since October 15th, and should have been in the hands of every architect before now. If you haven't a copy write to the Administrative Building Council of Indiana at our well-known State Law Dispensary.

3. Regional meetings, for various reasons, have not been held as frequently as desired, but we can recall a dandy that was held at Fort Wayne.

4.. We're hoping that Mr. Rammel will explain what the last paragraph of his letter means in some future correspondence.

5. As for the P. S., we are following with our answer from Billican himself.

* * *

Still With the Society

"Puye, N. M., December 29, 1928.

"Dear Caleb:—

"The fellow who wrote—'The more I see of men the better I like my dog,' did not write this while he was addressing Christmas cards last week, or he would never have said this.

"It sure was some job writing Merry Christmas on four thousands cards to our friends—and yet we did it. You know—I sometimes feel—the days spent out here next to nature—away from our friends that it seems to tie us up closer to them, it seems then that true friendships are made.

"Being away out here in the sage brush—I have a great time living over the days lived in old Indiana. It's great to experience the thrill that comes at this Christmas time for the good you have done and the friends you have made during the year and the real service you have rendered to the Indiana Society of Architects.

"You know—'I am an Optimist'—can see good coming out of every thing, so as I sit away up here high and dry—with blue sky overhead, entrancing beauty on every hand, with contentment and relaxation running out the ends of my toes—what a lot of real service the architects in Indiana could do for both the Society and the Chapter this Winter by putting over that Registration Law for Architects, Contractors and Building Inspectors.

"Say: Caleb, this begins to look like business back in God's Country. How I itch to be back at the Capitol making friends with those farmer fellows sent down from the fields to make a few more laws—so I could tell them how much we need a few laws for the architects. Tell Warren Miller and Merritt Harrison if they need a real Guy who has been breathing air with a tang of pine and balsam to help put these bills through, to write me at Shu-fin-ne Ruins. Wishing you all the compliments of the season, and happiness for a full year.

"Yours for a square meal,
"BILLICAN."

STEEL INSURES STRENGTH AND SECURITY

Ideal modern practice calls for structural steel to frame the large auditoriums of churches like the abo
Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

STEEL STRUCTURES

In any community there are scores, probably hundreds, of buildings that have been made obsolete by the growing demands of civilization. They may be factories, office buildings, hotels, business structures, schools, public buildings, churches or homes. If this obsolescence cannot be counteracted, that building must either be torn down, or remain an increasing liability to its owners.

Obsolescence is eradicated by (1) increased floor area by added stories (2) the construction of additions on adjoining ground; (3) converting the entire building to another use and occupancy; (4) reconstructing a portion of the building for another use and occupancy; (5) reconstructing the entire interior of a non-fireproof to a fireproof construction, retaining the exterior walls and foundations; (6) removing the building to another site.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Structural steel is used in this garage to give a clear span and eliminate obstructions on the floor. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

INATE OBSOLESCENCE

It is necessary that the essential structural frame of a building be such that it can be adapted to these changes with a minimum of cost, time and inconvenience. The steel frame, consisting ordinarily of columns, girders, beams and trusses, is an assemblage of these units with riveted "joints" (at some near future time probably with welded "joints")—it is an articulated construction. Any part or parts can be disassembled, removed, replaced, rearranged, or reinforced without lessening the strength or durability of the structure. Because of this characteristic of adaptability or flexibility, the steel frame is the only one that can be adapted to construction operations that are necessary to prevent or eradicate building obsolescence.

Vol. X INDIANAPOLIS, INDIANA, JANUARY 12, 1929 No. 42

INTENSIVE EFFORT TO BE MADE TO ENCOURAGE APPRENTICES IN THE BUILDING TRADES

That Is An Important Objective Mapped Out By Indianapolis Building Congress For 1929

One of the aims of the recently organized Indianapolis Building Congress, and one upon which it contemplates centering serious attention during 1929, is to encourage to the fullest extent not only the employment of more apprentices by local building contractors but also a systematic and thorough training of boys who particularly are interested in and are desirous of entering the carpentry trade.

Steps to that end have been started and Fermor S. Cannon, chairman of the Apprentice Committee of the congress, announces the set up of a Joint Committee for Apprenticeship training in the carpentry trade consisting of three representatives of the employers of that trade and three representatives of the labor union. J. Emmett Hall, Hall Construction Co.; Lewis Brandt, Jr., Brandt Bros., and Wm. Schumacher, of the John A. Schumacher Co., represent the employers. F. S. Manion, Guy Ackerman and W. L. Spenny from the Carpenters' District Council represent labor on the committee. Harry E. Wood, director of Vocational Education and Manual Training in the city schools is a member ex-officio of the committee.

The above committee has had several meetings and adopted a form of agreement governing the apprentice boy in that trade. This has been officially approved by the Carpenters' District Council and the Associated General Contractors Association of Indianapolis. This agreement will serve as the working agreement between the apprentice boy and the Joint Committee on Apprenticeship for the carpentry trade as well as the general Committee on Apprenticeship of the Indianapolis Building Congress. It provides for a four-year period of apprenticeship with a wage increase every six months. It also provides for continuous employment of the apprentice and compulsory school attendance of two evenings a week for two hours each evening. It provides for a minimum and maximum age of 17 to 22 years.

The full term of apprenticeship is divided into eight periods of six months each. The apprentice shall receive his advanced rating and classification only upon the satisfactory completion of each six months period. This rating and classification shall be given by the Joint Committee on Apprenticeship for the carpentry trade.

At the successful completion of his four-year term of apprenticeship and school training, the apprentice boy becomes a journeyman with journeyman wages, and he will receive a diploma from the Indianapolis Building Congress at graduation exercises conducted by the congress, the Board of Education, the Joint Committee on Apprenticeship for the carpentry trade.

The minimum wage for the carpentry apprentice provided for in the working agreement is 30 per cent of the journeyman's wage for the first six months period; 35 per cent the second period; 45 per cent the third period; 50 per cent the fourth period; 60 per cent the fifth period; 65 per cent the sixth period; 75 per cent the seventh period; 80 per cent the eighth period. In case the wages of journeymen are increased the schedule of apprentice wages shall be increased in like proportion in each period.

The course of study for the carpentry apprentices is being worked out by Harry E. Wood, Director of Vocational Education in the Schools; F. S. Manion, of the Carpenters' District Council, and Wm. Schumacher, of the John A. Schumacher Co. This course of study will be ready for use in classes beginning in February.

The headquarters of the Joint Committee on Carpentry Apprentices is 616 Chamber of Commerce Building, and the secretary is Kate B. McCann, executive secretary of the Indianapolis Building Congress. Any boys wishing to enter the carpentry trade or any carpentery apprentice not registered with the Joint Committee should get in touch with Miss McCann.

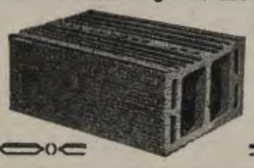
"We have made a very definite step forward in the right direction," says Mr. Cannon.

"This Joint Committee on Carpentry Apprenticeship is only one of several committees which we plan to set up in the various building trades to train and educate the apprentice boy to become an all-round and competent mechanic and a credit to his trade."

AN EVENT OF IMPORTANCE TO ALL INDIANA BUILDERS

Annual Convention of State Contractors Association Means Much to Indiana Building Industry

Each year the annual convention of the Associated Building Contractors of Indiana attracts builders in great numbers from all over the state, men who are eager to get a comprehensive idea of the building situation, the trend of things, the attitude of labor, to exchange ideas with the other fellows and to lend aid in advancing constructive propositions that may directly and indirectly benefit the builder and the building industry.



These annual gatherings for the past ten years have contributed much, both to the men of the building fraternity and the business generally. First and foremost they have generated a far-reaching co-operation amongst the builders of the state, and have brought about co-operative effort between the contractors and other professional, trade and labor groups, unity of action and purpose such as was unknown before the A. B. C.'s got into action.

The success of these conventions and the resultant reactions is traceable primarily to the fact that the efforts of the state contractors association are not actuated by a spirit of selfishness, rather, they are inspired by the one thought, the greatest good for the greatest number. Every proposition, every move, launched has been to prosper the building industry, for in that prosperity, in any advancement whatsoever achieved, the con-

AN EVENT

(Continued from Page 5)

tractural interests were bound to share. Ameliorization of conditions, greater understandings with allied interests and a general co-operative effort between the contractors themselves and with the professional, trade and business groups have been the result. And out of it all have come things that years ago would have been impossible and would still be had it not been for the Associated Building Contractors of Indiana. The outstanding achievement is the co-operation that has been effected for it is that one thing that drew the contractors together, permitted them to meet allied groups, and from that meeting on common ground have been born virtually a state building code and a state building congress, two as progressive and constructive achievements as have been effected by any group of contractors anywhere in the world, and that is taking in a wide territory. In recounting these things and stressing them full acknowledgement is admitted of the help extended by others, nor is undue credit claimed by the Associated Building Contractors, but, it was in the annual convention of the state contractors association ten years ago that action was started that has ultimately resulted in that which has been so far achieved, for, then it was that a wide co-operative effort was advocated, and only through co-operation was it possible to bring about the present state of affairs.

And to continue the effort the members of the state A. B. C's., will convene again in annual session at the Lincoln Hotel, Indianapolis, Jan. 29 and 30 in what promises to be a highly interesting, important and constructive two days' meeting. Especial attention is being devoted to program details through which to provide good speakers. Then, too, there will be discussions covering the various ramifications of the contracting business and salient features having a bearing on it. Particular attention will center around and on the proposed legislative program of the Indiana Building Congress of which the State A. B. C's., is a part.

There are those who seek to ignore the state association or consider it of small consequence, but every builder in the state is affected by its operation and influence whether he cares to admit it or not. It is an influence that can not be denied and every Indiana builder within and without the A. B. C's. fold profits by that which its members accomplish. The new standard building regulations and requirements now in the effect have a vital bearing on all Indiana building operations, and since the Indiana A. B. C's., was one of the prime movers in securing the establishment of this new code, that one instance more than any other demonstrates that the state association does have to do with all contractors.

The work that has been done by the men who have stood by the association through thick and thin is manifest and those men, except for the few who have passed on to their final reward, will be back in Indianapolis the latter part of the month to continue the good work.

INDIANA SOCIETY OF ARCHITECTS PLANS FOR ITS ANNUAL ARCHITECTURAL EXHIBIT

To Be Moved on to Ft. Wayne Following Month's Display at Indianapolis

The work of Indiana Architects is again to be featured for the enlightenment of the public by means of the Annual Architectural Exhibit of the Indiana Society of Architects to be staged at the John Herron Art Institute, Indianapolis, during the month of February.

Every effort is being exerted to make this the best of all the exhibits sponsored by the Society, and those of the profession are urged to lend their aid to the scheme by submitting exhibits which may be in the form of photographs, water colors, oils, pencil renditions, photostats, in fact, work in any medium will be welcomed.

One feature of the exhibit that is most attractive is the annual award of a gold medal and five Honorary Certificates to those architects whose work on display is judged to be of outstanding merit. The awards will be made on the basis of general excellence for the gold medal and on type as represented by these classifications, commercial buildings, apartments, public and semi-public structures, industrial and residential work.

A new departure will be made in the hanging of the exhibit this year by sectional grouping, that is arranging exhibits according to localities. By this means it is hoped to arouse individual city and territorial interest not only among the architects but on the part of the public as well.

At the conclusion of the exhibit at Indianapolis it is planned to move it on to Ft. Wayne, where it is to be sponsored by the Ft. Wayne Society of Architects and the Chamber of Commerce.

The exhibit will open at Indianapolis February 3.

STEPPING BACKWARD

Building Trades Pass Up Means To Remedy Jurisdictional Dispute Menace

Notwithstanding the fact that the Building Trades Department of the American Federation of Labor at its recent meeting in New Orleans, had full knowledge that in many cities there were jurisdictional trade disputes existing, many of which were in such a condition with work stopped, which threatened if not settled at once to cause serious delays in construction work and losses financially to their own members as well as to contractors and owners; they failed to take any immediate action towards adjusting them.

They not only did not discuss them in meeting but failed to direct as they should have done that the International Officers who were present in New Orleans, get together and determine that some trade should proceed with the work in dispute, then leave the question of final determination as to who the work did really belong to, to a later conference. They could easily at least make a ruling that work should proceed with the union workmen in possession of the particlular kind of material and should, were they sincere in wanting to have jurisdictional disputes eliminated, place no hardships on the building public.

International and union politics evidently played an important part in the proceedings of the convention which they say was so peaceful and harmonious that it was not considered a good idea to disturb with the many vexing disputes still existing between the unions affiliated with the department. The convention did, however, felt justified in going out of its way in taking a rap at some cities that either wanted to form some local board to adjust temporary, jurisdictional disputes or those cities where such boards had been in existence for use long before the National Board of Awards was formed and had been functioning successfully in their respective communities.

As newspapers say they frowned upon any attempts to take away from the Department or the Internationals any prerogatives they claimed to have as first aid to an industry suffering dearly from the abuse and use of jurisdictional disputes by unions on buildings in course of construction. An application from Kansas City to form a local board with an adverse recommendation from the Executive Board of the Department precipitated a

lively discussion which was followed by the Department upholding the report and thus frowning upon any attempt of any city in trying to keep jobs going without any interruption on account of disputes of a jurisdictional nature.

It is presumed that the usual motions prevailed to refer the subject matter to the Department and the International Organizations with the suggestion that they get together and adjust all jurisdictional disputes. This is alright as far as it goes but the contractor and the owner want to get their buildings finished in time and they are the real interested parties in the matter, the men who pay the freight are entitled to more consideration than the Building Trades Department thus far have shown any desire to grant them.

The jurisdictional trade dispute must not and should not be permitted on any job. Immediate and prompt relief should be accorded any contractor when a dispute involving two or more unions arises. If the Building Trades Department is desirous of retaining the confidence of contractors who are employing organized workmen, they must at once devise some way of adjusting disputes the minute they arise. Either let the work stay in the possession of the trade which has it or let local bodies of employers and union men temporarily decide it or at once give to the building industry some tribunal for the adjustment of disputes of this kind, that the department, the organization, the contractor, architect and the building public will have complete confidence in.—Bulletin, National Assn., Bldg. Trades Employers.

CHEERING

Survey Among Supply Dealers Indicates Brighter Building Year Ahead

An increase in volume of construction is anticipated by building supply dealers during 1929 over last year, it is indicated in a survey made by the Universal Portland Cement company, among dealers in the company's trade territory. Nearly 1200 dealers participated in the survey.

The company makes an annual survey of dealers' opinions as to the outlook for the coming year. The dealer being in close touch with local conditions is in a good position to point the trend in the industry, it is held, while a summary of dealers' opinions provides an index of general conditions.

Increased farm building is forecast uniformly in the agricultural states, reflecting an optimistic attitude toward the farm situation generally. This is indicated especially in the replies of dealers located in the middlewest and northwest states.

Residential construction will reach a total greater than that of 1928, the dealers believe, especially in the middlewest states. Sentiment of dealers in east central and northwest states also, points to increases in residence building in these sections.

YOUR TRADE CONVENTION

The attendance at your trade convention is an imperative obligation which every contractor owes to the association of his fellows when they meet to discuss problems effecting the industry. Organized effort is an essential necessary to promote and protect the interest of those who have any chosen vocation for their life work.

A big organization and a big convention has a wonderful effect among those who may want to retard the progress of industry and hamper it, with a discouraging influence upon its welfare and prosperity. Letting the other fellow do your job will not help you unless you participate in this effort to do yourself good as well as others.

If the better element of our country would refrain from exercising their right of franchise, it would not be necessary for us to take the time, vote and help to decide what is best for our community and our nation. The same feeling should prevail when it comes to supporting organized effort for the benefit of our interests collectively.

BUILDING IN INDIANA IN 1928, TRUE TO INDICATIONS, FAILED TO MEASURE UP TO THAT OF THE PRECEDING YEAR

Aggregate Loss In Ten Cities Amounted to Over Twelve Percent

Much has been said pro and con as to the relative value of building permit records as setting forth a criterion by which to gauge the buildling volume. There is this much to the permit data it represents the work actually launched in a given territory and does not set forth mythical volumes bolstered up by contemplated work which may be months off as to maturity. There is many a slip between contemplation and the stage where bids are received and contracts awarded. There is considerable work that was contemplated in Indiana in 1928 but failed to reach maturity during the year. Much of it may develop in 1929 but to link it up with the 1928 volume and then include it again in the 1929 figures when it goes ahead is hardly fair in setting forth the true building situation.

Ten cities reporting their building operations last year through official building permits granted show that the actual total volume of building for the year was considerably below that for 1927, 12.42 per cent less as a matter of fact.

The total volume for 1928 was $55,769,021 as against $63,676,642 for the preceding year. At the same time these cities issued 2938 less permits last year than in 1927, proving that there was ground for the numerous complaints registered throughout the year by building men. Evansville, South Bend, Mishawaka, Hammond and Indianapolis registered gains over 1927, but the losses recorded at Gary, Terre Haute, Richmond, Muncie and Elkhart were too great to be offset by those places that showed increased business.

The official figures of the various city building inspection departments for the two years are as follows:

Cities	1928 Permits	1928 Est. Val.	1927 Permits	1927 Est. Val.
Elkhart	787	$ 1,063,899	704	$ 2,660,566
Evansville	6,190	5,780,269	5,461	3,870,208
Gary	2,022	6,082,915	2,857	15,016,529
Hammond	1,042	6,510,630	1,322	6,141,100
Indianapolis	10,566	23,669,315	12,976	22,775,414
Mishawaka	618	1,251,428	508	1,018,098
Muncie	4,863	2,883,141	4,794	3,051,920
South Bend	3,714	6,639,397	3,475	5,325,166
Richmond	574	940,223	638	1,828,839
Terre Haute	1,491	947,804	2,070	1,998,802
Total	31,867	$55,769,021	34,805	$63,676,642

GETTING AROUSED

We are following with a howl from a new correspondent. This is apparently a case of some easy talking steel-sash salesman, rather than anything for the Society to agitate its dandruff over. We are more than happy to get these contributions—it makes our own work that much easier, and it does tend to make us all a bit more chummy, doesn't it?

It's a little difficult, however, for us to understand just why, when an architect sets out to achieve something in a literary fashion, he should assume the vernacular of the dreadfully illiterate. There's Billican, our friend of The Berries, and now Uncle Pete. You don't suppose that architecture and illiteracy are common indications of the same disease?

* * *

Standardization Takes One to the Jaw
Way Down East
In Indiana.

"Dear Caleb:

"Beins that it's 2 dern cold fer fishin' and not cold enuff for huntin' rabbits, I mite as well be thinkin' about sum business fer Spring if there's goin' ta be eny.

"Tonite after my hired man, Bill, got thru sloppin' the hogs en I milked 4 cowz, we went out into tha kitchen 2 look over last weak's mail, among which I found 3 catalogs frum differint iron window factories. Each catalog had a letter hooked to the cover with a peece of crooked wire u ever read, the advertizing man uv each company sure handed it 2 u.

"Now, Bill waded thru the mail that contained short letters with figgers on 'em that allaz taks a check to anser 'em, while I tried to soak up wat wuz sed by these 3 iron winder makers. The substance uv each letter wuz about the same and I really beleve that the writers had an all night party when they decided to send all the house planers a letter and a book that had pictures uv their iron winders in 'em.

"The first thing each uv 'em done was 2 appologise fer sendin' the book and letter and then accused Herbert Hoover, tha feller that's goin' 2 be our next President if he ever gets back from the cannibals alive, uv bein' responsible fer changin' the sizes uv the iron winders. I think it's a dirty trick in all uv em 2 send a man like Mr. Hoover 2 South America and then lay all blame and mistakes that they have made onto him. I think it's a case of doin' somethin' to a good man when his back is terned, for Mr. Hoover is still goin'. It really is a question in mine and Bill's minds whether Mr. Hoover really told them fellers to change the size uv the winders and believe that these letters wuz ritten before November 6, 1928, and it wuz only done as a campaign knock fer Mr. Hoover. We believe that they must be Dimokratz.

"Eny-waz, after lookin' at the pitchers in the book, I discovered that the outside width uv the winders are 3'0", 3'6", 4'0", 4'6", and 5'0". The length are 4'6", 5'0", up to 9'0".

"Now, I haint had much learnin' but Bill and me built cow stables and a hog house uv brick on this place and we discovered that brick was 8" long and 2" thick and the plaster that they put between the dern things 2 hold them together wuz ½" thick. The old iron winder sizes were bad enuff 2 work with standard size brick without cuttin' most uv em, but these new winder sizes are impossible 2 use without cuttin' every brick. Now at the rate of wages the brick mason are gettin', which I understand is about $10.00 a day, it would cost a young farm 2 pay for the extra brick required to lay brick around these iron winders. It would only add 2 to the pleasure uv the brick layer 2 use them as it would give him a chance to lay down their trowl and look fer their hammer and chisel and lite a cigarette between the movements. I jest rekon that the president of the Brick Mason Union wuz present when thees iron winder sizes wuz changed fer it will add 25% more work 2 lay the brick around there winders than if they are the proper size which would eliminate all brick cuttin'.

"The letters go on 2 say that this change wuz made fer economical en standardization uv construction en that if tha old winder size wuz used a type charge would be added, whatever that is. If it is economizing 2 add 25% 2 the cost uv your brick work in order 2 save printing of fractions and odd sized inches, then Bill an' me will use wood sash frum now on.

"Now, we will take up the glass sizes thet they have shown. Everyone knows who has ever built a barn, hen, or hog house on their farm that when u go 2 the paint and glass department which is usually located in the back-end uv a drug store, that the clerk always sells glass with sizes in even inches and when he has 2 cut an odd sized glass, he charges u 10% more fer it than if u bought the glass uncut. This is also known as a type charge on glass and is caused on account uv breaking part uv the glass and the time it takes 2 cut it. While lookin' over the pictures uv these iron winders I can not find one glass that is a stock or standard size on the whole page en there are 72 pictures uv winders on the page en there are just 388 lights uv glass, not one uv 'em but what must be cut smaller than stock size. Most uv 'em on the top en sides uv the glass.

"Frum the amount uv extra work that the glass man will have I am wondering whether the president uv the Glass Manufacturers Association wuzn't there at this conference uv standardization. I would like 2 have sum kind friend architekt tell me what success they are havin' with the new standardization uv iron winders sizes, and how they manage 2 get around the trouble that Bill an' me will have, should we decide 2 build a green house this winter 2 raise our cabbage plants fer spring. I would also like 2 have these iron winder makers tell us where they are savin' us farmers money should we decided to use their winders.

"Well, Caleb, the hired girl is gettin' anxious to quit work 'cause her and her beau are goin' 2 a pie supper down the road at the Meetin' House so gess I had better shut up 'til next weak.

"Yours fer a change uv heart in winder sizes.

Yer Uncle Pete."

ROBERT BERNER STRUCTURAL STEEL COMPANY, Indianapolis—Structural Steel, Steel Bins and Hoppers, Ornamental Iron, Miscellaneous Iron, Fenestra Sash, Massillon Joist and Accessories.

WALLACE STEEL AND SUPPLY COMPANY, Lafayette — Structural and Miscellaneous Steel, Fabricating, Steel Basketball Bank Board Frames.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

STRUCTURAL STEEL

permits Speed, Economy, Safety

The picture opposite illustrates clearly the immense superiority of structural steel over any other framing material. The frame of this ultra-modern fireproof apartment is a complete structural steel skeleton on which is placed a floor system of open web type steel joists. These, in turn, carry a thin concrete floor slab. The ceiling consists of plaster applied to a heavy mesh plaster lath attached directly to the steel joists.

This system permits extremely rapid, safe and economical construction. All floors can be poured simultaneously and when concreted are left absolutely free and clear for the installation of plumbing, electrical work, partitions and accessories. This type of construction eliminates the aggravating, costly wait of two weeks to a month for the removal of a forest of props, forms and other obstructions which under old-style methods prevent free and ready access to the floor for work following.

What more convincing demonstration can be had, as to the superiority of structural steel for modern construction?

Residence and Garage: $3,900.00, 2-stys. and bas., located at 4313 Arlington avenue. Private plans. Owner and builder, Herschell R. Keller, 3714 South Wayne street. Frame.

Residence and Garage: $3,500.00, 1-sty. and bas., located at 2161 Edgehill road. Private plans. Owner and builder, Charles J. Koehler, 4109 Monroe street. Frame.

Residence and Garage: $3,400.00, 1-sty. and bas., located at 1720 North State street. Private plans. Owner, John Dafron, care of general contractor, Ralph Dunn, 417 Greenlawn street. Frame.

Residence and Garage: $3,000.00, 1-sty. and bas., located at 2218 Ontario street. Private plans. Owner and builder, Andrew Keller, 1301 Park avenue. Frame.

Residence and Garage: $3,000.00, 1-sty. and bas., located at 4225 Reed street. Private plans. Owner and builder, Herschell R. Keller, 3714 South Wayne street. Frame.

GARY

Contracts Awarded

City Hall Building (alterations): $30,000.00, 2-stys.. and bas., located at 7th and Massachusetts streets, Gary. Archt.., W. W. Cooke, 1527 Broadway, Gary. Owner, City of Gary, Board of Public Works, Anna Barrett, clerk, City Hall. General contract awarded to Williams and Patch, 749 Broadway; plumbing awarded to F. E. Simard, 1228 Washington street; heating and ventilating awarded to Peoples Hardware Company, 668 Broadway; electrical wiring awarded to Lighthouse Electric Company, 570 Washington street, all of Gary. Work consists of interior changes on first and second floor, structural steel, new partitions, new plumbing, electrical wiring, altering heating and ventilating system.

Residence and Garage: $20,000.00, 2-stys. and bas., 25x35, located near Gary. Archt., Joseph Wildermuth, 583 Broadway, Gary. Owner, Jay F. Grantham, 528 Washington street, Gary. General contract awarded to L. I. Combs, 757 Broadway, Gary. Brick, stone trim, hardwood floors, tile baths, mechanical refrigeration.

HAMMOND

Private School and Gymnasium: $60,000.00, 2-stys. a ndbas., 55x150, located at 243 Huehn avenue, Hammond. Archt., C. I. Krajewski, 730 Main street, Dubuque, Iowa. Owner, Saint Casimirs Church, Rev. John Hoskinski, pastor, 243 Huehn avenue. Plans in progress; probably will mature in early spring. Brick, concrete and steel construction, steel sash, steam heating system, composition built-up roof. Will contain 8 classrooms and a gymnasium.

KOKOMO

Store Building (remodeling): $12,000.00, 2-stys. and bas., 110x130, located at 112 East Walnut street, Kokomo. Private plans. Owner, F. D. Miller, 115½ North

Buckeye street, Kokomo. Lessee, Sears, Roebuck and Company, Chicago, Ill. Owner builds by day work. Work consists of building new terra cotta front, copper set store fronts, plate glass, maple floors, decorating, new plumbing and electrical wiring.

Contracts Awarded

***Apartment Building** (4 apts.; remodeling from residence): $8,000.00, 2-stys. and bas., located at Kokomo. Archt., Oscar Cook, 622 Armstrong-Landon Bldg., Kokomo. Owner, Messrs. F. Simmons and Williams, care of architect. General contract awarded to Davenport Brothers, 1201 South Washington street, Kokomo. Frame, apartment equipment, mechanical refrigeration, tile baths, electrical wiring, general remodeling.

MUNCIE

***Church and Sunday School Building:** $250,000.00, 3-stys., 125x165, at High and Adams streets, Muncie. Archt., Houck and Smenner, 108 East Washington street, Muncie. Owner, High Street Methodist Episcopal Church, Rev. Claude M. King, pastor, 429 West Charles street, Muncie. Receiving new bids to 10:30 o'clock a. m., Tuesday, January 15th, on the general contract; heating and ventilating; plumbing and electrical wiring. Stone veneer over brick, pipe organ, rolling partitions. Additional bidders on the general contract: American Construction Company, 1201 East Georgia street, Indianapolis; H. A. Woolery and Son, Bloomington. On plumbing and heating, C. M. Kimbrough Company, Muncie; Phil Stauf, Muncie. The W. D. Tibbetts Company, Marion, is figuring the electrical wiring instead of the plumbing and heating.

SOUTH BEND

***Township School Building:** $100,000.00, 2-stys. and bas., located in Green township, St. Joseph county, near South Bend. Archt., Freyermuth and Maurer, 107 Lincolnway, east, South Bend. Owner, Peter Paterson, trustee, rural route 1, South Bend. Receiving bids to 2 o'clock p. m., Saturday, February 9th. Brick, reinforced concrete, structural steel, steam heating plant, composition built-up roof, stone trim, wood sash, steel sash, steel lockers, shower baths, plumbing, electrical wiring. Will contain 16 classrooms, study hall, gymnasium-auditorium.

Contracts Awarded

***Hotel Building** (alterations): $20,000.00, "Oliver Hotel," located at the northwest corner of Washington and Main streets, South Bend. Archt., V. F. Fagan, 208 Poledor Bldg., South Bend. Owner, The Oliver Hotel Company, Andrew C. Weisberg, manager, 107 North Main street, South Bend. General contract awarded to H. G. Christman Company, 306 South Notre Dame avenue. Work consists of converting dining room into two storerooms, changing billiard rooms into dining room, size 50x50, copper set store fronts, plate glass, hollow tile partitions, tile work, ventilator, air washer, plastering, interior decorating, dumb waiter.

Factory Building: $50,000.00, 1-sty., 60x200, located on Westmore street, South Bend. Private plans. Owner, South Bend Forge Company, A. Johnson, president; Harold Johnson, secretary, South Bend. General contract awarded to H. G. Christman Company, 306 South Notre Dame avenue. Brick, structural steel, steel factory sash, composition built-up roof, concrete floors.

TERRE HAUTE

***Consolidated School Building:** $150,000.00, 2-stys. and bas., 90x120, located at Stilesville, Franklin township, Hendricks county. Architect not selected; maturity indefinite. (Please note correction, previously reported architect selected.) Owner, Howard Rhea, trustee, Rural Route, Clayton.

Contracts Awarded

High School Building (fire rebuild): $20,000.00, "Gerstmeyer Technical High School," located at 13th and Locust streets, Terre Haute. Private plans. Owner, Terre Haute Board of Education, George C. Carroll, superintendent. General contract awarded to Robert Myer, 1901 Washington street. Work consists of repairing brick walls, new wood sash, new wood floors, rebuilding chemistry and physics departments, new cafeteria equipment, new desks.

WANTED

Position: Superintendent or foreman on any kind of construction work. By a licensed engineer of years' experience. O. N. Benson, 306 East Michigan street, Indianapolis.

POSITION WANTED

By registered architectural and structural engineer, member of I. E. S. Thoroughly experienced in design, construction and supervision. Now employed and must give 30 days' notice. Salary $300.00 per month to start. Address Box 2, INDIANA CONSTRUCTION RECORDER, 313 East Market Street, Indianapolis.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the North Manchester Building Co. of North Manchester, Indiana, that on Tuesday, January 29, 1929, at 10 a. m., at the office of the superintendent of schools in the high school building of said city, they will receive bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage and electric wiring of the new East Grade School Building. According to the plans and specifications prepared therefore by Henkel & Hanson, architects and engineers of Connersville, Indiana, and adopted and approved by the building company, the state board of health, the state board of education and the state board of accounts.

Plans are now on file in the office of the North Manchester Building Co. and the state board of accounts.

Copies of the plans may be had upon depositing a check of $25.00 with the architects which check will be returned in full providing the plans are returned and a bona fide bid entered by 10:00 a. m., January 29.

All bids must be in writing on form No. 96. The building company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 5 per cent of said bid. These checks are to be made payable to Levi D. Ikenberry, president of the North Manchester Building Co., and will be held by the building company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid. The checks of those bidders who fail to be awarded the contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute a surety bond then he or they shall forfeit the amount of the certified check as liquidated damages for such failure for the use and benefit of the proper fund of the North Manchester Building Company.

Dated this 9th day of January, 1929.

LEVI D. IKENBERRY,
President.

GEORGE B. BALSBAUGH,
Vice-President.

CHARLES H. OLINGER,
Secretary-Treasurer.

STATE BUILDING CONGRESS TO START ACTION AT ONCE ON PROPOSED LEGISLATION

Effort Has Been Unanimously Endorsed Throughout the State

A steady, intensive, speedy and comprehensive missionary campaign conducted during the past month by the Indiana Building Congress in the interest of proposed legislation to be introduced at the current session of the state legislature, was brought to a close the past week with two big meetings at Terre Haue and Vincennes January 16 and 19, respectively.

The state building congress is sponsoring three bills for introduction before the legislature, one proposing the registration of architects, the second, a like provision for contractors, and the third, to provide for all building construction inspection throughout the state.

Eleven special meetings were held, four in northern Indiana, at Hammond, Michigan City, South Bend, four in central Indiana, Anderson, Kokomo, Lafayette and Muncie, and three in the western and southern portion of the state, Evansville, Terre Haute and Vincennes. These gatherings were all joint affairs being participated in by architects, contractors, material supply men and labor representatives. Special guests included civil authorities and members of the legislature from various sections.

All meetings were well attended and much interest and enthusiasm was evinced in the proposed legislation as it was explained in detail. It was the concensus of opinion of those who attended the meetings that Indiana is in need of just such legislation, and if it is secured better structures will be the result because the requirements to practice architecture will be more exacting, the responsibility of contractors will be increased, and a state-wide inspection of new construction work will assure a strict adherence to the structural safeguards required by the state laws.

A safe and conservative estimate of the number of men who attended all eleven meetings place the attendance at close to two thousand, all directly or indirectly connected with or interested in the building construction industry. Further, those men unanimously endorsed the proposed legislation, and plans are now under way whereby the Indiana Building Congress hopes to start action in the very near future in an endeavor to secure the passage of the proposed bills.

SOME OBSERVATIONS

Impressions From the Building Construction Field

January and February are the usual months in which conventions of most trade associations, particularly in the construction line are held. Contractors should give some thought to the importance of these annual gatherings and realize that without their existence the building industry would be a bad business to be in. Organized effort is most effective when all interested co-operate for the benefit of all and stabilize conditions for themselves and the building public.

* * * *

It won't be long now until we again hear the music of the pick and shovel as they turn over mother earth and began digging to place the footings for more homes, factories, churches, schools and skyscrapers, and it won't be long before the contractor is again confronted with demands for possibly more wages for tradesmen and more favorable conditions than are now enjoyed by workmen. We all in the next three months should and must give some thought to these matters.

* * * *

Who is going to hold the bag when the five-day week becomes universal and the owner of a nice sunny Saturday would like to take advantage of good building weather; and who is going to hold the bag when workmen getting less than some other mechanic decides if he must lose a half day on Saturday, his wage rate must be increased to meet his loss? Certainly nuot the workmen nor the contractor, it must then be the owner. What is the answer? Will the owner continue to build and improve his property or will he begin to curtail his operations to meet the conditions imposed upon him? Then again, we repeat, what is the answer?

* * * *

The evolution in the construction line is playing havoc with some of the building trades. The carpenter who was the big guy twenty-five years ago and had a big gang of men on any kind of a job now sees his opportunities for 240 working days a year slipping, all due to the new methods of construction being used in the erection of most any kind of a building. More brick, more stone, more tile and more structural iron is being used. Iron replacing heavy timbers, tile being substituted for wood partitioning, cement being used for flooring and brick and stone for externals. Well anyway some good American citizen is doing the work and drawing down a good day's pay, so why worry.

* * * *

Again evolution has given the painter a setback by cutting out the use of wood in many buildings and building them with more fire-resisting qualities. Cement construction has had a great deal to do with the plight of the painters. They used to be kept busy on floors for weeks in a big building but the cement floor has also deprived them of many days' work each year, their average getting lower perhaps every year. Home modernization campaigns may help them and the annual clean up and paint up campaign may benefit them. Perhaps they could get a little more work and be able to keep up with the other trades if consideration would be given to the thought that the expense of painting is a little too high with the present rate of wages.

* * * *

The little fellow needs the big fellow to show him the way and as an example of how to grow up and prosper and be a real contractor. The big fellow needs the little fellow to educate him and show him how to do things right and make him a worthy success in the industry. The little fellow of today will, perhaps, be the big guy tomorrow. His support should be cultivated on matters affecting

mutual interests. He should be taught the ways of evading the many pitfalls which confront the new beginner. He should be encouraged to even in a small way do big things and make for the best there is as a master in his own line.

* * * *

If, perchance, the legislature of your state passes some measure which will work a hardship on you and your interests, or pass any legislation which may be inimical to your business, just blame yourself. If you have not given legislation activities some thought or attention during the sessions of this law-making body. Every bill introduced affecting your interest should be carefully scrutinized for jokers and other possible paragraphs which smack the class legislation discriminating against any of the people of your state.—(From Bulletin of National Association of Building Trades Employers.)

BUILDING ACTIVITY EXPECTED TO CONTINUE ON LARGE SCALE IN NINETEEN HUNDRED AND TWENTY-NINE

Forecast Indicates New Year May Exceed All Records

By C. STANLEY TAYLOR,
Director of Research, National Building Publications

Pursuant to usual custom and ignoring the pitfalls that continually beset the prophet, the Architectural Forum, New York City, has just completed what is perhaps the most detailed and exhaustive survey of potential building activity ever made in this country. If the deductions which have been drawn from a great array of dependable facts and figures are correct, it is quite probable that the year 1929 may prove to be the greatest of building construction years.

In order to explain the basis for some of the unusual phases of this forecast, it may be well to describe briefly the investigating facilities and background which have been employed to develop the figures presented herewith.

For the past seven years 'The Architectural Forum, the leading professional journal of the architectural field, has presented an exhaustive study of the work under way in the architectural offices of the country for the ensuing year. The predictions which have been based upon this annual survey have proven to be unusually accurate in view of the ultimate contract figures developed.

This year new facilities were offered for this research work, facilities that presented the opportunity to establish greatly broadened research work in the building industry. They opened countless contacts with contractors, realtors, engineers, speculative builders and building material dealers, in addition to the coverage of the architectural field. The present forecast is ,therefore, based upon confidential individual reports from the offices of 2,057 architects throughout the country, covering in detail the work now on their boards or in definite contemplation for contract letting in 1929, plus information derived throughout the general building field. This contact includes well over 150,000 individuals and organizations who are directly interested in various phases of the building industry and a cross-section of whose opinions must have a great bearing upon future activity.

Architects' Busiest Year Apparent

In view of the fact that this confidential information from architects has been gathered by the Forum for seven consecutive years, it is highly significant to realize that the total contemplated work indicated in this eighth annual survey is greater than ever before in the history of the industry. The data gathered covers the amount of work estimated to be on the boards of architects for building in the year 1929. This work does not include public works and utilities, but covers only actual building construction as contemplated by various types of owners who make up the clientele of the architectural profession today. Added to this there have developed figures covering the types of buildings which are not planned by architects but which in large measure are developed by contractors, engineers, and speculative builders.

Thus we find that the first significant fact is the unusual amount of prospective construction reported by the architects of the country .

Conditions have so changed, not only in the building industry but in our entire commercial life, that the establishment of analytical forecasts cannot be carried out in exactly the same manner as in previous years. The building industry can well be compared to the situation on the given up attempts to forecast the speculagiven up attempts to forecast teh speculative and investment movements of the public by applying measurements of the past, and the reason for this is that so many new elements have entered the picture that past performances are not sufficint.

Similarly we find that new elements have crystallized in the building industry—factors which must change the methods of anticipatory measurement. For instance, the financing of building projects has been placed upon a much better basis of public relationship. There are not only tremendous underwritings of individual building projects being carried out by bankers in our various cities, but building operators have established securities of an investment nature which are even traded in on the stock exchanges of the country. We find the year 1928 showing in the New York real estate market an actual securities exchange where real estate and building issues are actively traded, making a liquid market for such securities which for many years have carried the aspect of frozen or torpid investments. We find a tremendous number of municipal and state bond issues or other business of public financing being established for the carrying out of school, hospital and public building programs and for the development of airports, which in themselves promise to contribute mightily to the to the building volume of this country. building volume of this country. There may be found in evidence also the consummation of a number of vast development projects and improvements which are opening up tremendous territories for active building construction. The subdivision builders of the residential field are undertaking housing projects almost beyond imagination in their scope. There is under way the most extensive modernizing and remodeling program ever known in the history of this country. This program is being deliberately developed by extensive educational work through building material manufacturers who realize the tremendous size of the potential markets created. Mortgage money, while handled in a manner more intelligent than formerly, is more plentiful than ever before and so many new methods and sources of financing for the building field have been established that no constructive program has to seek very far for its banking facilities.

Coupled with all these factors we have an increasing urge toward building construction by the public whose pocketbook was never so fat. We have a national administration which is known to have a constructive attitude toward developments which involve building and in which there is definite confidence on the part of all elements of the business world. We face several years of obvious prosperity and with no dark clouds threatening any disturbance of a program which promises more comfortable and efficient housing for all types of commercial, industrial and domestic activities.

In January, 1928, we advanced the theory that the several preceding years of great building activity did not represent a "boom period," but that the country and

the building industry had arrived at a relatively new normal augmented by a growing population; the desire for better housing and better buildings for commerce and industry; and by the ability to pay for these facilities.

The actual contract record of 1928, according to certain statistics, was approximately 5 per cent ahead of the total for the year 1927 and 4 per cent in excess of the total for 1926. These figures include not only building construction but also engineering work. On the other hand, the actual building construction has continued in such a volume for five years now that it seems absolutely necessary to discard the "boom period" and to accept the new normal.

Realizing that this forecast is based on 2,057 individual reports; that it has been established after a very careful correlation and study of the individual sources of information ;that it has proven substantially correct for the past seven years; and that no deviation in the method has been undertaken this year, it is felt that the law of averages functions to a point which will show it to be closely approximated in actuality during the year 1929, unless unusual economic disturbances interfere.

The coming years of prosperity will unquestionably see another great uplift in the standards of housing for all types of commercial, industrial and domestic buildings. Our cities, suburbs and rural areas are being drawn more closely together by unprecedented transportation improvements. Our congested central areas are decentralizing for the benefit of those who desire to live in the suburbs and the country and they are reforming into new types of housing within the cities. Even the tenement districts are undergoing these changes and everywhere there is a change from the old to the new, either in the planning of new structures or the modernizing of old ones.

We are gradually learning better methods of measuring building construction activity in this country. The methods of collecting data and figures are being improved constantly and the facilities for such study are being greatly increased. When we realize that figures of actual records show an annual investment of well over six billion dollars and that there is a tremendous volume of unrecorded construction and of maintenance and remodeling expenditures, it becomes quite evident that we are building well over eight billion dollars worth of new construction annually and that the probable total expenditure in every phase of the building industry is perhaps ten billion dollars a year!

Significant Changes In Building Trends

While every condition points to a continuation of building activity and perhaps the exceeding of all past records to the amount of 4 per cent or 5 per cent for the year 1929, there are, of course, some significant changes. To measure the change in public demand we can compare the percentage figures of our 1928 forecast with those of our 1929 forecast as follows:

Type of Building	Requirements for New Buildings by Percentages 1928	1929	Change	
Automotive	3.9	2.8	—1.1	About one-third less
Banks	2.8	2.9	-|- .1	Slightly more.
Apartments	13.2	13.1	— .1	About the same
Apartment Hotels	4.4	4.8	-|- .4	About one-tenth less.
Clubs, Fraternals, etc.	3.5	3.4	— .1	About the same.
Community, Memorial	1.5	1.2	— .3	About one-fifth less.
Churches	4.3	4.2	— .1	About the same.
Hotels	6.9	6.7	— .2	About the same.
Hospitals	6.2	4.9	—1.3	About one-fifth less.
Industrial	5.3	7.5	-|-2.2	About 40% less.
Office Buildings	11.8	13.5	-|-1.7	About 15% less.
Public Buildings	6.7	6.7	----	About the same.
Schools	11.5	11.7	-|- .2	Slight increase.
Stores	2.9	3.4	-|- .5	About 20% more.
Theatres	3.3	3.2	— .1	About the same.
Welfare, Y. M. C. A., etc.	2.1	2.2	-|- .1	About the same.

In the field of dwelling construction the reports show less work on the boards of architects at the present time, but two facts must be realized in this connection. First, that a large proportion of projects of this nature were not actually on the boards in December when this survey was made and second, in the field of small dwellings a very large proportion of houses costing less than $15,000 are not designed by architects. It would seem in this field that there would be built approximately the same volume of residential construction in 1929 as in 1928—perhaps more and that in the case of houses costing $50,000 next year will equal, if not exceed, the records of 1928.

It is apparent that these changes in trends of building various types of structures are but a logical reflection of the experience of several prosperous years in the commercial and industrial world. The building industry is apparently to be called upon to provide the facilities for increased production demands and for increased business activity. In the institutional field it is obvious that increased construction of new hotels should not be expected because in general we have enough space of this character. The hospital field in 1929 is evidently to have a breathing spell in actual construction activity, but it will be a tremendous year of planning to meet great hospitalization programs which are being undertaken by more communities than ever before. The school field shows a steady upward trend which is but natural in view of the expansion of our educational facilities, a condition which always accompanies prosperity.

STATE BUILDERS TO HAVE THEIR DAY

Annual Convention of Associated Building Contractors Near at Hand

Week after next will occur at Indianapolis, January 29 and 30, one of the vital annual events of Indiana building circles, the Eleventh Annual Convention of the Associated Building Contractors of Indiana an organization representative of approximately two thousand general and sub-contractors. It is at these conventions that attention is centered primarily on the builders' problems and upon that basis the programs are built. Business methods, conditions, the labor situation, and other pertinent matters all come in for serious consideration. Then, too, the builders' relations with allied building construction interests, both professional and business, are discussed and means sought to create increased harmony in that direction, to effect thorough co-operation for the facilitation of building progress and the generation of a spirit of unity in the common cause of advancing the industry as a whole.

This year special effort is being exerted to lend attractiveness to the convention by the presentation of special talks on timely subjects dealing with the contractural business. There is a wealth of evidence at hand indicating that there is a keen interest in this year's gathering all over the state. Inquiries relative to the convention are numerous and information advanced by various city associations affiliated with the state body, is to the effect that all of them are preparing to have large representative delegations on hand.

The Ink Spot

PALLADIO'S LITTLE GAME IS ALL SHOT TO PIECES

Nominating Committee Topples Over His Blocks

We feel that the nominating committees have played a very thoughtless, mean little trick on this sheet. Our tender, sensitive feelings have been irreparably injured. If these nominating committees had had in mind, purely the discomfiture of ourselves, they could have conceived of no fashion in which to more surely achieve their ends than by making exactly the nominations which they made.

You will remember that a week or so ago we suggested that THE INK SPOT would be a fine medium for prospective officers to use in giving expression to their ideas and lack of ideas. We confess that our thought had a smattering of the nefarious in it. We had visions of wordy brickbats being catapulted back and forth across this page; and we had even hoped that we might get littered up with a few gobs of nice, luscious, smeary mud balls. Our thought in this was not altogether the same one which inhabits the mind of the school boy when he snatches the chair from under his neighbor. We weren't purely naughty. You know that nothing is as good an antidote to an intellect as an argument. When you get into an argument you can just think of all sorts of fine and lovely ideas that you never would have thought of if it hadn't been for the argument. And so we had hoped to use this torrid campaign as a means for the development of new and more brilliant ideas. We had hoped that out of it there would be built up an impetus of dynamic purposes for the Society that would carry us through the entire year at a lively rate of real accomplishment.

And in addition to the above conception of a lively election, we had in mind being relieved of a lot of our own hard and arduous labors by the contributions of the candidates. We hoped to fill our pages with pros. and cons. from other pencils and to give our own a rest.

But our happy mirage has gone glimmering—relegated to the hopeless limbo of forgotten things, and we call it a dirty trick.

Any interest which we might have had in this election is gone, and we don't care so much whether the candidates contribute or not. Not that they might not have fine and inspiring thoughts—no doubt they would—but the sting which accompanies difference of opinion would be lacking. And in addition to that we just have lost all interest as to which of the candidates for president is elected. As a matter of fact, two candidates of more nearly equal qualifications could scarcely have been selected—and either will undoubtedly make a leader whose administration will be memorable.

We don't care which one is elected or why—and we just can't think of anything less interesting than this campaign seems to be. It's just a shame that we can't stir up a first class fight out of a situation which offered some real possibilities. We're sorry—and disappointed—and out-of-sorts—and we're Irish—and that's why we're sorry. Who in thunder thought of nominating two canditdates from the same office for the same job any way?

But if, after this rather back-handed invitation, any of the candidates wish to dash out in print for the edification of the electorate, we'll be glad to include their contributions. We have under advisement printing a brief sketch of each candidate, giving their qualifications, etc., etc. Are you with us?

* * *

Just to What Purpose Is It All?

We are rather tired—all yawney and stretchy—over the repeated occurrences of literature bearing down pro and non-pro relative to so-called Modernism. There is Greeley and Cram of Boston; Aldrich and Kahn and Magonigle of New York; Medary of Philadelphia; Shaw and Smith of Chicago, just to mention a few scattering folks who have been regaling us with their high-sounding phraseology relative to the subject. We are rather inclined toward the belief that a large percentage of this language is just to give the authors the opportunity to establish themselves in the class of the lofty-brows.

We have no formula for the classification of designers on the basis of style. To wrinkle the nose at a design because that particular design is something a bit different than anything you have seen before, is, we believe, Puritanic and small-minded. Also, to shout in scathing tones, "Ah-hah-fundamentalist," just because a building indicates a bit of recognizable precedent is equally petty-minded. To call the one "crazy" and the other "lacking in inspiration" are both the results of preconceived ideas which the possessor does not allow to bend with reason—it's just pig-headed.

Can't the entire problem be answered then let's forget the whole thing and go then let's forget the whoel thing and go about our business of being architects in the very best fashion that we know. Doesn't a good-sense definition of design answer the whole thing? To us this is design—a plan which performs its function of economical construction and operation, clothed in pleasing and satisfying color and shape—that is design. We don't care whether you name it Tibetian or Mexican, if it satisfies these requirements you have real design. Every style, we presume, in the initiate was "Modern," but every style was largely the result of precedent coming in contact with structural requirements. This age has its peculiar structural requirements and the result is sure to be a style which sometime will bear a label, but we'll gamble that it won't be "Modern," for every style is modern when first promulgated.

STEEL INSURES STRENGTH AND SECURITY

This picture shows only one section of a large terminal round house for a big railroad. Structural steel forms the framework. Steel fabricated and erected by a member of the Indiana Structural Steel Board of Trade.

ONLY STEEL WILL

Steel is the strongest building material. Steel is safe, uniform —always proved right, chemically and physically, before it is assembled. Steel speeds construction — hastens returns on investment. Steel occupies less space — provides larger interiors.

Steel stands up to the severest service. Steel meets shock with

Jan. 19-26, Feb. 2

SCHOOL BIDS WANTED

Sealed proposals will be received by the board of education of Godwin Heights School District No. 6. Fractional at Godwin school, Godwin Heights, Grand Rapids, Michigan, Frank Molesta, secretary, according to plans and specifications prepared for the work by Lockhart & Fett, Inc., architects and engineers, 457 Associates building, South Bend, Indiana. Proposals will be received up to 2:00 p. m, central standard time on Thursday, January 31, 1929.

Contractors must make their application for plans on or before January 22, 1929. All contractors mailing applications before midnight of that date will receive plans without charge. Applications mailed later than that date will be required to pay $8.00 for the printing of plans and specifications. Contractors making applications later than January 26th, will not be supplied with plans. Contractors desiring to receive recognition who have not previously submitted proposals through the office of the architects should submit a statement of their qualification together with bank and bond reference, otherwise the architects reserve the right to withhold plans. One set of plans and specifications will be on file at the office of the secretary, and one set on file at the office of the architects.

With each proposal the full amount

in form of a certified check or bidder's bond must accompany the proposal made out unconditionally to Mr. Frank Molesta. secretary, as a guarantee that the contractor if awarded the work, will enter into contract furnishing two bonds as required by the state of Michigan. One to the board of education, and the other to the state of Michigan on the form of bond as outlined in the specifications.

General construction	$2,000.00
Heating and ventilating	800.00
Plumbing	500.00
Electrical work	300.00

Contractors will be required to bid on all requirements of the specifications and their base bid must be on the articles specified. Contractors will be required to submit with their proposal the names of sub-contractors proposed for the work. If materials are substituted for any of the articles specified, approval of the architects must first be obtained before submitting the substitution. An alternate price must be submitted with the proposal on the forms supplied by the architects for this purpose, and such alternate proposal must accompany the base bid, and may be added or deducted and under no condition can the substitutions be included as a part of the base bid. This requirement is insisted upon as a means of placing all bidders on equality with their original proposal.

The time of completion of the contract shall be August 15, 1929. The estimated cost of the entire proposed work is $75,000.00, including equipment. The board of education reserves the right to accept or reject any or all bids.

Proposals must be on the forms supplied by the architects and any change or rearrangement of the same may result in the contractors' proposal being rejected.

Contractors may retain their plans and specifications until all bids are received, but they are required to deliver their plans and specifications to the architects at the letting and receive their receipt for same at that time.

BOARD OF EDUCATION GODWIN HEIGHTS SCHOOL DISTRICT NO. 6, FRACTIONAL, GODWIN HEIGHTS, GRAND RAPIDS, MICHIGAN,

SEALED PROPOSALS

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Chester School Township, Wabash County, Indiana, will receive sealed bids at the office of the undersigned trustee on Walnut street in the town of North Manchester, in said township, county and state, up to 11 o'clock A. M., Monday, February 11th, 1929, for the furnishing of all materials and performing of all labor for the construction and completion of a new two-story and basement school building in the said Chester Township, county and state, above mentioned.

Such work will be under and according to plans and specifications heretofore approved and now on file in the office of the State Board of Accounts, of the State of Indiana, and in the office of the undersigned trustee, and in the office of Everett I. Brown, architect, 309 First National Bank Building, Fort Wayne, Indiana.

Copies of plans and specifications will be furnished by said architect to reliable contractors applying for same.

All bids shall be made upon form No. 96 bidding blanks and be accompanied by non-collusion affidavit. Each bid shall be accompanied also by a certified check upon a solvent bank, payable to the order of Charles Wright, trustee, in an amount equal to five per cent (5%) of the total amount of the bid, as a guaranty that the contractor will, if awarded the contract, enter into a written contract for the performance of such work and furnishing of such materials, with said Chester School Township, Wabash County, Indiana, and furnish a surety bond in a penal sum equal to the contract price, all to the satisfaction and approval of the said trustee and advisory board, within ten days after such award.

If for any reason the bidder shall fail to enter into such proper contract, or shall fail to furnish said bond as above set out, then the full amount of such certified check shall be retained by the School Township as liquidated damages. The estimated cost of said building is $108,000.00.

Said building is to be erected on the site now occupied by the Chester Township High School building and such suitable material as may be approved by the architect and the owner may be used by the contractor in the erection of the new building; bids therefor shall be made in accordance with the specifications.

Separate proposals will be received in the following manner:

1. General construction.
2. Heating and ventilating.
3. Plumbing and sewerage.
4. Electrical.

Bids will be considered on any of these contracts separate or any combination of them.

The undersigned trustee and advisory board reserve the right to reject any and all bids, or any part of any bid, and hold same for investigation of all bids and bidders, and to waive any defects and informality, if deemed in the interest of said School Township and the bids to be submitted hereunder are received subject to the sale and delivery of a bond issue of $108,000 for the purpose of raising funds to pay for said building.

Signed and dated at North Manchester, Indiana, January 15th, 1929.

including general construction, complete heating and ventilating, plumbing and sewer work, and electric work and fixtures, all to be according to the plans and specifications as prepared therefor by Charles H. Byfield, architect, and J. M. Rotz Engineering Co. and adopted and approved by the building company, the state board of health, the state board of education and the state board of accounts. Plans and specifications for said work are on file in the office of the Decatur township school building company and the state board of accounts.

Copies of the plans and specifications may be had from the architect, Charles H. Byfield, Indianapolis, Indiana, or the engineer, J. M. Rotz Engineering Co., Indianapolis, Indiana.

Every bidder shall submit a bid in writing on bid form No. 96, and with his sealed bid in the same envelope he shall deposit a certified check in an amount equal to 5 per cent of the amount of said bid. These certified checks shall be made payable to Otto Thornberry, president of the Decatur township school building company and will be held by the building company as a guarantee of good faith that the bidder or bidders will enter into a written contract and execute a surety bond to the full amount of his contract and approved by the buiding company. The checks of the unsuccessful bidder will be returned to them when the contracts for the work have been signed.

Should the successful bidder or bidders fail to enter into a contract or execute a surety bond, then he or they shall forfeit the amount of the said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Decatur township school building company.

The building company reserves the right to reject any and all bids and also reserves the right to take sufficient time to investigate bids and the qualifications of each bidder.

Dated this 10th day of January, 1929.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the North Manchester Building Co. of North Manchester, Indiana, that on Tuesday, January 29, 1929, at 10 a. m., at the office of the superintendent of schools in the high school building of said city, they will receive bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage and electric wiring of the new East Grade School Building. According to the plans and specifications prepared therefore by Henkel & Hanson, architects and engineers of Connersville, Indiana, and adopted and approved by the building company, the state board of health, the state board of education and the state board of accounts.

Plans are now on file in the office of the North Manchester Building Co. and the state board of accounts.

Copies of the plans may be had upon depositing a check of $25.00 with the architects which check will be returned in full providing the plans are returned and a bona fide bid entered by 10:00 a. m., January 29.

All bids must be in writing on form No. 96. The building company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 5 per cent of said bid. These checks are to be made payable to Levi D. Ikenberry, president of the North Manchester Building Co., and will be held by the building company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid. The checks of those bidders who fail to be awarded the contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute a surety bond then he or they shall forfeit the amount of the certified check as liquidated damages for such failure for the use and benefit of the proper fund of the North Manchester Building Company.

Dated this 9th day of January, 1929.

LEVI D. IKENBERRY,
President.

GEORGE B. BALSBAUGH,
Vice-President.

CHARLES H. OLINGER,
Secretary-Treasurer.

HENKEL & HANSON, Architects, Connersville, Indiana.

Jan. 12-19-26

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that sealed proposals will be received by the Lawrence school building company, at the auditorium of the Lawrence high school, Lawrence, Indiana, at 10:00 a. m., on Monday, February 4, 1929, for the erection of a two-story and basement consolidated township high school building, all in accordance with plans and specifications prepared by Lowell L. Hoatson, architect, copies of which are on file in the office of C. K. McCormack, attorney, 409-12 Peoples Bank building, Indianapolis; in the office of the state board of accounts, state house, Indianapolis, and the office of the architect at 60 West 30th street, Indianapolis, Indiana.

At the same time and place, separate or combined bids will be received for the furnishing and installation of a heating and ventilating plant, plumbing and sewerage system and electric wiring for the above building, as prepared by Bevington-Williams, Inc., mechanical engineers, 1137 K. of P. Bldg., Indianapolis.

The owners reserve the right to reject any or all bids and to take time to investigate the bids and the qualifications of the bidders.

All proposals must be in writing on form 96, as prescribed by the state board of accounts, in a sealed envelope bearing the title of the work and the name of the bidder, and be accompanied by a certified check in the sum equal to three (3) per cent of the whole amount of the bid for each proposal. These checks must be made payable to the Lawrence school building company, Guy L. Roberts, treasurer, and will be held as a guarantee of good faith that said bidder or bidders will enter into a contract and execute bond approved by the owners for the faithful performance thereof if his bid or bids are accepted. The checks of those bidders who fail to be awarded contracts will be returned to them as soon as the contracts are awarded. Each bidder to whom a contract is awarded will be required to execute a bond for the full amount of his contract approved by the owners.

Should the successful bidder or bidders fail to enter into contract and execute bond within ten dayst after the award, then he or they shall forfeit the amount of said certified checks as liquidated damages for the use and benefit of the proper fund of the Lawrence school building company. Each bidder shall file with his bid the statutory affidavit required under section No. 8968 Burns' revised statutes of the state of Indiana, 1914.

Copies of the plans and specifications may be obtained from the office of the architect at 60 West 30th street, Indianapolis, Indiana, upon the deposit of $25.00 for each set; said deposits will be returned to the bidders upon the safe return of the plans and specifications to the said office of the architect on or before the day and hour set for receiving bids.

THE LAWRENCE SCHOOL BUILDING COMPANY,
THOS. E. McCORD, Pres.,
GUY L. ROBERTS, Secy.-Treas.,
ARCHIE J. RUSSELL.

Vol. X | INDIANAPOLIS, INDIANA, JANUARY 26, 1929 | No. 44

CONTRACTORS OF THE ENTIRE STATE TO ASSEMBLE IN CONVENTION AT INDIANAPOLIS SHORTLY

Members of Associated Building Contractors of Indiana to Hold Annual Meeting Tuesday and Wednesday The Coming Week

Back in February, Nineteen Hundred and Nineteen, the first actual convention of the Associated Building Contractors of Indiana was called at Indianapolis, Ind. There had been several meetings the year previous by a small group of general contractors from various localities in the state, but it was not till nineteen nineteen that definite effective organization, representing the entire state, was achieved. The call went out for a convention and met with a hearty response, the attendance exceeding all anticipation. The delegates were receptive to proposals made and were eager to further any schemes that would provide closer contact between the contractors of the state and tend toward the institution of co-operation and effect greater unity of action.

That was the start. Ideas were advanced and discussed, accepted favorably, and yet few thought they could be worked out practically. Many propositions had all the earmarks of dreams, but through the agency of co-operation, backed by a stern determination, practically all of those "dreams" have been brought to a materialization, a condition that many contractors ten years ago contended could not be done.,

That convention, back over the years, was a great success, a far greater success than the men who participated in it realized at the time. Each year since then the constructive policies initiated have been elaborated upon and extended, ever increasing the standards set up by the original convention group of the A. B. Cs. of Indiana.

Another similar annual gathering is at hand, to take place at the Lincoln Hotel, Indianapolis, January 29 and 30, the coming week, and there is every reason to believe that the approaching convention of the state contractors association will not only meet the standards, in the way of attendance and constructiveness, set up in past years, but will excel them all.

The officers of the state association have directed special attention to this year's convention, have sought to provide a somewhat varied program from that of former years and in other ways increase the interest. In a word, every feature looking toward making this the outstanding business gathering in A. B. C.'s history has been attended to. The only thing left to assure unqualified success is for Indiana contractors to go to the convention and enter into its spirit.

This is not an officers' meeting, nor a directors' meeting, nor a selected group gathering. It is a meeting of, for and by the contractors of Indiana. If there ever was an opportune time for the contractors of the state to get together, interchange ideas, get better acquainted, talk shop, boost the contractural business, have a little fun, the convention is that time and place to do all those things. Think it all over, plan to be there.

A. B. C. CONVENTION PROGRAM

Plans For Annual Meeting Announced

While there must, of necessity, be more or less routine to any convention, those in charge of planning next week's affair for the state contractors have sought to cut it to the minimum, eliminate all possible tedium, and add to attractiveness by substituting talks on pertinent subjects pertaining to building. Then, too, the annual evening dinner and entertainment order is to be altered this year. The association itself will sponsor this feature this year and has arranged quite a divertisement for the evening dinner. Among the speakers will be Governor Harry G. Leslie, who for several years has shown a keen interest in building matters. An attractive musical and entertainment program is to be provided by the Paramount Artists.

The official plans for the two days' session, as announced by the association, will follow this layout:

Tuesday, January 29th

10:30 A. M.

Call to Order.
Roll Call.
Address by President.
Reading of Minutes of Last Convention.
Appointment of Committees.
Announcements.

2:00 P. M.

Report of Officers.
Introduction of Resolutions.
"Vocational Training"—Geo. K. Wells, State Supervisor of Industrial Education.
"Standard Practice" — L. A. Turnock, Chairman, I. S. A. and A. B. C. Joint Committee.
"Bonds"—Bert Metcalf, bond broker.
"State Building Rules and Regulations"—Fermor S. Cannon, Chairman Advisory Committee, State Building Council.
"Legislation"—Harry A. Fenton, General Council A. B. C. of Indiana.
"Midwest Building and Allied Arts Congress and Exposition"—J. H. Owens, Secretary, Indiana Building Congress.

6:30 P. M.

Annual Dinner

Lincoln Hotel—Travertine Room

Toastmaster—Wm. F. King, M. D.
Address—Hon. James M. Ogden, Attorney General of Indiana.
Address—Hon. Harry G. Leslie, Governor of Indiana.
Music and Entertainment — Paramount Artists.

Wednesday, January 30

9:30 A. M.

Report of Cities—Building construction work for 1929. Labor conditions. Wage scales. Apprentice and other subjects.
Committee Reports.
New Business.
General Discussion.

2:00 P. M.

Election of Officers.
Selection of Convention City.
Adjournment.

The Ink Spot

AMONG THE SUPERLATIVES IN THRILLS

An Appreciative Response to Ideals Advanced

Have you ever experienced a thrill comparable to the one experienced by the bit of gray-haired antique anatomy who has prospected all over the gold fields of the world, and who eventually discovers the precious metal in his own cellar? (And we aren't speaking of bootlegging).

Or again, can you imagine the long-drawn heave of relief which issues from the "innards" of the airplane jumper who cuts loose from his plane at a 10,000 foot elevation, and goes rampaging and hurdling through space (just absence of anything)—and who cuts the cords of his parachute and then keeps right on hurdling and rampaging—and he's sure it won't work—and he's given up and offers a 6,000-word prayer in one-half second's time—and then—and then—it catches? He feels a real relief.

Well, something has happened to us which gives us the same sort of feeling of eclat' which we imagine this airplane jumper has when the wind bellies out his parachute.

To use a figure which has been used before, we deliberately and with malicous aforethought appropriated a vehicle which belonged to the I. S. A. This happened almost a year ago now, when we commenced our career in this space. Since that time we have gone galivanting all up and down the business of architecture, talking about a lot of things that didn't concern us; but also underlining a few ideas which we thought were of rather deep concern to architecture. We confess to a certain amount of discouragement at times. We've felt somewhat like the fellow catapulting through space with a large uncertainty as to whether or not his flight is going to be successful or not. We've felt uncertain as to whether or not our literary venture was going to be successful.

We don't care what happens now. Anything can happen and we'll feel we've been to a degree successful. We feel as happy and cheerful as the miner who finally discovers gold, or the airplane jumper who feels the pull of his parachute. Now the occasion of all this introduction is contained in a scanty worded letter and here it is:

> "The writer has been reading, from time to time, articles in the Indiana Construction Recorder, regarding the platform of your Society, and wishes to say that they meet with my approval. I would be glad to add what little weight I can to the cause by joining the Society, if possible.
>
> "Please advise regarding procedure.
>
> Yours very truly,
>
> C. W. GARRARD."

THAT is all the recompense we care for.

* * * *

THE ANNUAL CONVENTION

Fine Program To Be Offered

And now to give the Society some publicity relative to the Annual Convention, February 8th and 9th. We're going to slip through the various items which constitute the program and underline in so far as we can each item.

First, there's the Exhibit. And this Exhibit, more than ever, this year belongs to Indiana. There isn't to be so much from outside this year. And that increases the responsibility of each member as well as increasing each member's opportunity. For this Exhibit is your opportunity. It's your opportunity to meet your public, for this Exhibit is viewed by folks from all over the state. Folks come to Indiana just to see your efforts portrayed there.

But, forgetting the more or less selfish motives, we should be willing to contribute on the basis of giving just Architecture a chance with the Indiana public. This is our one big publicity effort. We've used up reams of paper and cubic miles of pure air has been rolled into lilting lingo, all bearing down on the matter of publicity. Now here's our chance to teach the public a bit about what real Architecture means. Let's take advantage of it. Let's make this a real demonstration of Indiana Architecture.

Now we've given so much room to the Exhibit that the rest of the program is crowded. But here it is.

On Friday afternoon, February 8th, the business meeting which we are promised will be a live, interesting and active meeting. This meeting can be and should be the heart and soul of our Organization. It is hoped to make it a real bit of constructive effort. And you can't tell we might discover a buzz saw and a piece of flint and start a real blaze.

Friday evening is given to the A. I. A., but we're all invited. We are to have an architectural speaker for the evening who is known in the profession from Gloucester to San Diego. We feel that in justice to this speaker we should carry his name over to next week and enlarge upon this part of our program, somewhat. We also are to have educational movies showing the processes of manufacturing one of our building equipment products.

Saturday morning you can all go over and watch the legislature going through their law-making calisthenics, if you wish. Saturday noon we'll gather for luncheon and then in the afternoon the John Herron Institute is ours, and you're asked to just ramble around these classic halls and absorb all the goodness which you can find here in so much abundance. First, there's the Exhibit. Impromptu constructive criticism should be the feeling for this tour through Indiana's Architecture. In addition to the Exhibit you will find the Institute a lovely place in

which to wander and to enjoy old fabrics, and pewter, and paintings, and etchings, etc.

And Saturday night is our own get-together—and that's just what it is meant to be this year. It's to be a fellowship dinner—a regular back-slapping, "Hello, Jack" evening, where it is hoped that every member will have an opportunity to meet with every other member and get really acquainted. It's when we know each other well enough to greet by first names, that we begin to realize that the other fellow isn't such an ogre after all, and that our problems are his problems and that with a little co-operation we can all progress together. We are to have a speaker this evening also, but more of him later.

At this point the finest announcement of all appears. We have, in years passed, been honored by the attendance of the Speaker of the House as our toastmaster. This year we are to have the Governor of the state, although he is still so much our friend that we feel as if he is one of us—Hon. Harry G. Leslie.

To conclude the evening the program committee has included what they call "divertisement." Now that is far too much of a word for us to negotiate, but our imagination is unusually active, and we believe that we can construct around that word a happy ending to a happy evening.

All that is requested of the membership is that each one may do his small share by being present.

* * * *

EIGHT ALSO NINE, FEB.

PALLADIO.

BIG MEETING OF INDIANA ENGINEERS SCHEDULED

To Be Held At Indianapolis, February 7 and 8

Those of the engineering profession of Indiana will find Indianapolis of especial interest for a coupie of days week after next, February 7 and 8, for at that time the Indiana Engineering Society will hold its Forty-ninth Annual Meeting in that city at the Hotel Severin.

This affair will be in the nature of a joint meeting of the Indiana Engineering Society, the American Institute of Electrical Engineers and the American Society of Mechanical Engineers, and is expected to attract a large assemblage of engineers.

An excellent assortment of talks by prominent men of the engineering field is scheduled, addresses that will cover a wide and varied field.

The program for the meeting has been announced by Secretary Charles Brossman as follows:

February 7th—9:30 A. M.

Registration.
President's Address.
Secretary's Report.
Appointment of Committees.
"American Engineering Council Work"—L. V. Sheridan, Indianapolis.
"Sedimentation and Screening Results on the Sewage of Miami, Florida"—Frank R. Theroux, Sanitary Engineer, Randolph-Perkins Co., Chicago, Ill.
"Progress of Sanitation in Indiana"—Lewis S. Finch, Chief Engineer, Department of Sanitary Engineering, Indiana State Board of Health.

* * * *

February 7th—2:00 P. M.

"The Dix River Dam"—L. F. Harza, Consulting Engineer, Chicago, Ill.
"The Mechanical Solution of Indeterminate Structures by the Use of Beggs' Deformeter Gages and Microscopes"—Prof. E. L. Eriksen, Purdue University.
"Recent Tests on an Electric Water Heater"—D. L. Curtner, Purdue University.

* * * *

"Air Craft Development"—Brig. Gen. W. E. Gillmore, Chief Air Corps, Wright Field, Dayton, Ohio.
"Present Status of Electric Welding of Structural Work"—A. M. Candy, Westinghouse Electric and Mfg. Co., Pittsburgh, Pa.

* * * *

February 8th—9:30 A. M.

"Unit Cantilever Slab"—C. B. Foster, Foster Engineering Service Co., Indianapolis, Indiana.
"Recent Technical Advances in the Fabrication of Structural Steel"—L. W. Bruck, Insley Mfg. Co., Indianapolis, Indiana.
"Some Aspects of Concealed Heaters"—H. C. Murphy, Vice-President, Circulair Heat, Inc., Louisville, Kentucky.

* * * *

February 8th—2:00 P. M.

"Recent Progress Toward Stabilization of the Coal Industry"—H. A. Glover, Vice-President, Knox Consolidated Coal Company.
"A Century of Gas Service"—Prof. R. B. Leckie, Purdue University.
"The Rating of Steam Generating Equipment"—Prof. H. L. Solberg, Purdue University.
"Education of the Power Plant Engineer"—Prof. A. W. Cole, Purdue University.
Report of Committees.
Election of Officers.

* * * *

February 8th—6:30 P. M.

Annual Dinner of the Indiana Engineering Society, American Institute of Electrical Engineers and the American Society of Mechanical Engineers.

Speaker—C. A. Harrell, Executive Assistant to City Manager, City of Cincinnati. Subject—"The City Manager Form of Government."

HOOSIER BUILDING DESPITE SET-BACK PLACED AMONG LEADERS

State and Capital City Edge Into Honor Lists

There is one consolation about the new building construction performance staged in 1929 in Indiana even though it was discouraging and disappointing. A survey of the country sets forth the fact that Indiana was not alone in its failure to meet the construction volume of the immediate past years, in fact, nine of the twelve states that regularly pile up the best building volumes showed varying degrees of loss from the 1928 figures, one just did about break even and two, New York and Ohio, were the only ones to show any appreciable gain.

According to the figures put out by S. W. Straus and Co., building financiers, data secured from five hundred and fifty cities and towns showed the country's building for last year to be three per cent behind that of the previous corresponding period.

Commenting upon the result revealed by the survey the financing company has this to say:

"The sharp declines which ensued toward the end of 1928 brought the total activities for that period to a lower level than has been reported since the year 1924. Basing the estimate on the group of cities and towns which report permits issued or plans filed throughout the year, it is apparent that the total volume of building construction was approximately $5,335,000,000. It is to be remembered that these figures do not include such activities as often are referred to as construction. The reports here studied cover only the items of new buildings and alterations.

Building permits issued in approximately 550 cities for the last five years have been as follows: 1928, $3,807,173,711; 1927, $3,927,901,236; 1926, $4,359,807,173; 1925, $4,478,593,689; 1924, $3,740,791,486."

And here is the one little ray of cheer for Indianas from the general failure, their state pulled up to and lodged among the twelve that registered the best new building volumes for the year. Then, too, Indianapolis nosed into twenty-first position among the twenty-five leading building cities.

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

***Consolidated School Building:** $150,000.00, 2-stys. and bas., 140x153, located at Lawrence, Indiana, Lawrence township, Marion county. Archt., Lowell Hoatson, 60 West 30th street, Indianapolis (room 207 Fletcher Branch Bank Bldg.). Mech. Engrs., Bevington-Williams, Inc., 1139 K. of P. Bldg., Indianapolis. Owner, Lawrence School Building Company, Thomas E. McCord, president; Guy L. Roberts, secretary-treasurer; Archie L. Roberts, all Lawrence. Trustee, Chester C. Negley, rural route "K," Box 128, Indianapolis. Receiving bids to 10 o'clock a. m., Monday, February 4th. The following are figuring the general contract. E. A. Carson, 1201 East 30th street; Economy Construction Company, 719 Meyer-Kiser Bank Bldg.; Pruitt and Quackenbush, 28 West North street; Ostrom Realty and Construction Company, Peoples Bank Bldg.; Brown and Mick, Inc., 226 East Michigan street; Moir and Davis, 836 North Denny street; Mead Construction Company, 1027 Lemcke Bldg.; Service Construction Company, 301 Castle Hall Bldg., all of Indianapolis; Arhtur Gill, Colfax; Vahle Construction Company, New Palestine; N. S. Ikerd, Bedford; Milo Cutshall, Akron. The following are figuring the plumbing and heating: R. M. Cotton Company, 1720 East 10th street; Strong Brothers, 309 North Alabama street; Hayes Brothers, 236 West Vermont street; Freyn Brothers, 1028 North Illinois street; Henry R. Meyer, 1246 East street (plumbing only); W. H. Johnson and Son, 330 East St. Joe street (heating only), all of Indianapolis. The following are figuring the electrical wiring: Harrison Electric Company, 131 East Market street; Hatfield Electric Company, 102 South Meridian street; Sanborn Electric Company, 309 North Illinois street; H. M. Stradling, 343 Massachusetts avenue; Robbins Electric Company, 340 North Delaware street; C. L. Smith Electric Company, 122 South Pennsylvania street, all of Indianapolis.

***High School Building:** $100,000.00, 2-stys. and bas., located on State Road 67, between West Newton and Valley Mills, Decatur township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Decatur Township School Building Company, Camby, Otto Thornberry, R. W. Lugar, Chester C. Fields, Camby. Trustee, Bert F. Yeager, Camby. Receiving bids to 10 o'clock a. m., Friday, February 1st. Brick, stone trim, steam heating system, composition built-up roof, reinforced concrete, structural steel. The following are figuring the general contract: Brown and Mick, Inc., 226 East Michigan street; Service Construction Company, 301 Castle Hall Bldg.; E. B. Ball and Son, 1131 North Tacoma avenue; Michaelis Brothers, 5829 Central avenue; Economy Construction Company, 719 Meyer-Kiser Bank Bldg.; Mead Construction Company, 1027 Lemcke Bldg.; Elliott-Myers Construction Company, 501 Fidelity Trust Bldg., all of Indianapolis; William J. Abraham, Seymour; Medland Brothers, Logansport; Charles Helfenberger, West Newton; Harry Vahle Construction Company, New Palestine; Jake Mann, Mooresville; William A. Gutzwiller, Batesville; Figuring the plumbing and heating: Fred G. Janitz, 619 Virginia avenue; Hayes Brothers, 236 West Vermont street; Freyn Brothers, 1028 North Illinois street; Strong Brothers, 309 North Alabama street, all of Indianapolis; Jake J. Barnhart, Wilkinson. The W. H. Johnson and Son, 330 East St. Joe street, Indianapolis, is figuring the heating. Henry R. Meyer, 1246 South East street, Indianapolis, is figuring the plumbing. The following are figuring the electrical wiring: C. L. Smith Electric Company, 122 South Pennsylvania street; Skillman Electric Company, 129 West Market street; Sanborn Electric Company, 309 North Illinois street; H. M. Stradling, 353 Massachusetts avenue; Hatfield Electric Company, 102 South Meridian street, all of Indianapolis, and Richardson Electric Company, Maywood.

Fraternity House (addition and alterations): $30,000.00, 3-stys. and bas., located at Lafayette. Archt., Thornton and Rodecker, 658 Fairfield avenue, Indianapolis. Owner, Alpha Tau Omega Fraternity, S. B. Lindley, president, 507 Odd Fellows Bldg., Indianapolis. Plans in progress, ready for bids in about two weeks. Brick veneering present building, addition 3-stys. high, new slate roof, new tile baths, new plumbing, electrical wiring, decorating.

***Church Building** (superstructure only): $20,000.00, 2-sty. and bas., 45x60, located at 34th and Hovey street, Indianapolis. Archt., H. J. Schoen, 5901 Lowell avenue, Indianapolis. Owner, Second Moravian Church Congregation. Rev. Vernon W. Couillard, pastor, 3403 North Hovey street. Mr. Charles T. Wells, 3426 Brouse street is receiving bids to 7:30 o'clock p. m., Friday, February 1st. Brick, hollow tile and cement block, flat built-up roof, pine floors, steam heating plant (already have boiler). Will have Sunday School rooms. The following are figuring the general contract: E. B. Ball and Son, 1131 North Tacoma avenue; Charles Van Sant, 1929 Dexter avenue; Schlegel and Roehm, 602 Lexington avenue; William P. Jungclaus Company, 825 Massachusetts avenue, all of Indianapolis.

Jan. 19-26, Feb. 2

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Chester School Township, Wabash County, Indiana, will receive sealed bids at the office of the undersigned trustee on Walnut street in the town of North Manchester, in said township, county and state, up to 11 o'clock A. M., Thursday, February 14th, 1929, for the furnishing of all materials and performing of all labor for the construction and completion of a new two-story and basement school building in the said Chester Township, county and state, above mentioned.

Such work will be under and according to plans and specifications heretofore approved and now on file in the office of the State Board of Accounts, of the State of Indiana, and in the office of the undersigned trustee, and in the office of Everett I. Brown, architect, 309 First National Bank Building, Fort Wayne, Indiana.

Copies of plans and specifications will be furnished by said architect to reliable contractors applying for same.

All bids shall be made upon form No. 96 bidding blanks and be accompanied by non-collusion affidavit. Each bid shall be accompanied also by a certified check upon a solvent bank, payable to the order of Charles Wright, trustee, in an amount equal to five per cent (5%) of the total amount of the bid, as a guaranty that the contractor will, if awarded the contract, enter into a written contract for the performance of such work and furnishing of such materials, with said Chester School Township, Wabash County, Indiana, and furnish a surety bond in a penal sum equal to the contract price, all to the satisfaction and approval of the said trustee and advisory board, within ten days after such award.

If for any reason the bidder shall fail to enter into such proper contract, or shall fail to furnish said bond as above set out, then the full amount of such certified check shall be retained by the School Township as liquidated damages. The estimated cost of said building is $108,000.00.

Said building is to be erected on the site now occupied by the Chester Township High School building and such suitable material as may be approved by the architect and the owner may be used by the contractor in the erection of the new building; bids therefor shall be made in accordance with the specifications.

Separate proposals will be received in the following manner:

1. General construction.
2. Heating and ventilating.
3. Plumbing and sewerage.
4. Electrical.

Bids will be considered on any of these contracts separate or any combination of them.

The undersigned trustee and advisory board reserve the right to reject any and all bids, or any part of any bid, and hold same for investigation of all bids and bidders, and to waive any defects and informality, if deemed in the interest of said School Township and the bids to be submitted hereunder are received subject to the sale and delivery of a bond issue of $108,000 for the purpose of raising funds to pay for said building.

Signed and dated at North Manchester, Indiana, January 21st, 1929.

CHESTER SCHOOL TOWNSHIP,
WABASH COUNTY,
STATE OF INDIANA.

CHARLES WRIGHT,
Trustee.

Jan. 26—Feb. 2-9.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the North Manchester Building Co. of North Manchester, Indiana, that on Tuesday, January 29, 1929, at 10 a. m., at the office of the superintendent of schools in the high school building of said city, they will receive bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage and electric wiring of the new East Grade School Building. According to the plans and specifications prepared therefore by Henkel & Hanson, architects and engineers of Connersville, Indiana, and adopted and approved by the building company, the state board of health, the state board of education and the state board of accounts.

Plans are now on file in the office of the North Manchester Building Co. and the state board of accounts.

Copies of the plans may be had upon depositing a check of $25.00 with the architects which check will be returned in full providing the plans are returned and a bona fide bid entered by 10:00 a. m., January 29.

All bids must be in writing on form No. 96. The building company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 5 per cent of said bid. These checks are to be made payable to Levi D. Ikenberry, president of the North Manchester Building Co., and will be held by the building company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid. The checks of those bidders who fail to be awarded the contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute a surety bond then he or they shall forfeit the amount of the certified check as liquidated damages for such failure for the use and benefit of the proper fund of the North Manchester Building Company.

Dated this 9th day of January, 1929.

LEVI D. IKENBERRY,
President.

GEORGE B. BALSBAUGH,
Vice-President.

CHARLES H. OLINGER,
Secretary-Treasurer.

ELEVENTH ANNUAL CONVENTION OF THE ASSOCIATED BUILDING CONTRACTORS OF INDIANA FROM ALL ANGLES WAS THE BEST EVER HELD

Fine Representative Crowd of State Builders Attends Sessions at Indianapolis the Past Week—E. L. Danner, Kokomo, Elected President

No other convention of the eleven that have been held by the Associated Building Contractors of Indiana in years past was ever so fruitful in bringing definitely to the fore indications of actual accomplishment by the organization, or more latent with promise for the future, than the eleventh annual assemblage of the association held at the Lincoln Hotel, Indianapolis, the past week. There was much else of interest but to the casual observer the outstanding feature of the entire convention hinged around the outcropping here and there of references to and material evidence of ideals, conceived back over the years, now reaching maturity.

It all must have been gratifying, both to the old-timers who have labored so earnestly in the A. B. C.'s cause and also to the newcomers in the ranks, for it all demonstrated the power of organization and co-operative effort, and that which is possible through those channels. Many of those who heard the ideas advocated years ago were skeptical at that time that those things could be put into effect and few realized the extent to which they would develop. It took this year's convention to bring the denouement.

Interest in the annual meeting was clearly manifested by the early arrival of builders from many sections of the state, these cities being represented, Anderson, Attica, Brownstown, Camden, Colfax, Elkhart, Evansville, Ft. Wayne, Hammond, Indianapolis, Kokomo, Lafayette, Michigan City, Muncie, Terre Haute, and Vincennes. Long before the doors of the Lincoln Room on the fourteenth floor were thrown open to the delegates the top floor lobby was crowded to overflowing and abuzz with merry conversation as the builders renewed acquaintanceships and talked over business prospects.

President Brill Starts Thing Off

Every one was ready and eager when President Guy Brill called the convention to order at 10:30 a. m. Tuesday. The roll call showed the above mentioned cities represented with good delegations. This was followed by a short address by the President, who recounted the past year's activities and suggested the members continue to carry on as earnestly in the future as in the past. These committee appointments by the chair concluded the morning session, recess being taken till 1:30 p. m.: Credentials, Geo. W. Schack and Al Weinman, both of Ft. Wayne; Memorial, H. H. Herbert, Michigan City, Ralph Brassie, Lafayette, Otto Gumper, Ft. Wayne; Resolutions, O. A. Toelle, Terre Haute, Ross Eshelman, Anderson, M. V. Clark, Ft. Wayne, A. E. Kemmer, Lafayette, and S. L. Kirk, Vincennes. Matt Hallenberger, Evansville, was named sergeant-at-arms.

The afternoon session afforded one of the most interesting programs ever provided for a State A. B. C. convention, shed enlightenment on the handling and training of apprentices and also brought to a focus tangible evidence of achievement that is outstanding in state building association work.

Anent Apprentices

As the first speaker for the afternoon, Geo. K. Wells, state supervisor of industrial education, was introduced, his subject being "Vocational Training." In substance, he said, "Business of all kinds has made progress of late years because men of the various individual branches have adopted the system of getting together to study their common problems. And this applies to building construction also. It is significant of intelligence that Indiana contractors meet in convention. It shows progress, for not so many years ago builders were wary of each other and the general attitude was to go it alone, let the other fellow find out for himself, if there was trouble let him get out the best he could.

But contractors, like others, have learned the folly of that idea and now seek to co-operate to improve conditions. One avenue that attracts universal attention is that of encouraging apprentices to enter the building field and in turn the best means for training them. In tackling the problem one should look to the future rather than to follow the line of least resistance.

He referred to the old way of farming out boys and the abandonment of that plan. Then the speaker turned to the modern way of co-operation between unions and schools to secure and train apprentices and in interesting manner set forth the details and procedure followed, that of part-time work on the job and in a vocational school.

Continuing, Mr. Wells admonished the builders to give thought to the plan, to shoulder their share in the providing of skilled mechanics for the future. Federal and state aid is available for the purpose. The contractors must work out definite plans for training, never failing to remember that the best program for the boy is the best for the employer and those with whom the boy works. Too, while providing better workers for the future, the contractor who encourages apprentices must not lose sight of the fact that he is aiding his country, for the young man with a trade makes a more useful citizen than the one who has none.

In conclusion, Mr. Wells advised Indiana contractors the way was open through the educational system to train apprentices and he urged co-operation between them and the schools to that end.

Would Establish Standards of Practice for Architects and Contractors

Attention of the contractors was then directed to the effort being put forth at the joint instigation of the Associated Building Contractors of Indiana and the Indiana Society of Architects to facilitate building operations by endeavoring to reduce to a minimum misunderstandings between the architect and contractor. This matter was clearly and concisely set forth by Architect L. A. Turnock, Indianapolis, who spoke on "Standard Practice."

"Contractors and architects," he said, "have awakened to the realization that they are all a part of one big industry, that all must work together for the good of the whole. To that end the A. B. C. and I. S. A. appointed joint committees to work out principles for standard practice. These committees have labored since June with this end in view to prepare bulletins as follows:

"First—The setting forth of minimum requirements for plans, specifications and details.

"Second—Revision of the standard A. I. A. General Conditions, also the standard A. I. A. contract forms between owner and general contractor, and between general and sub-contractor, to conform to the Indiana law.

"Third—The setting forth of the responsibilities and duties of the general contractor in his relation to the architect and sub-contractor.

"Fourth—The establishment of procedure as to receiving bids and awarding contracts; also a recommendation for the filing of sub-bids to eliminate 'shopping' or 'peddling'.

"Also the Standard Practice Committees are working along the line for the securing of uniform contracts for use in public building operations in Indiana that will meet with the approval of state officials and assure an equitable deal for the state, architect and contractor."

Concluding, Mr. Turnock said it was a big job, but when completed it will make known to the owner what he should get in the way of service and structure, will clarify the plan and specifications situation for the contractor, establish his position, and also put the architect on his mettle. It is going to take time to work it all out, he said, but, given support, the committees are intent on giving to the building industry of Indiana the best possible, and a set of standards such as it has never possessed before.

Opportunity to Reduce the Irresponsibles Among Contractors

The registration of contractors in Indiana, as proposed in a bill to be introduced at the current session of the state legislature, would be a good move, in the opinion of Bert Metcalf, bond broker, according to the views he expressed in a talk to the convention delegates. According to him, there are three classes of contractors in Indiana: First, the legitimate, or high type; second, the fellow who figures close and takes a chance; third, the one who hopes to get by by skimping the job.

Further, he asserted many bids submitted about the state the past year were astonishing and would indicate competitive conditions in Indiana were the worst in the country and something should be done to improve them. A bill that would fix competency, ability and responsibility, he said, would be a good thing for the industry, for any law that improves status is a good thing, not only for business, but the state also and her people. This bill, concluded the speaker, would eliminate the "bad actors."

A Real Source of Gratification

If there is one thing that lends encouragement and inspiration, it is the ultimate materialization of an ideal, the final result of continued intensity and sincerity, which marks achievement. Hence, though the subject was old and had been discussed before and by them many times, nevertheless, when Architect Fermor Cannon spoke on the State Building Rules and Regulations, he did so in such a way that he aroused keen interest and the message he sounded aroused pride in every heart of an A. B. C.'s member within hearing.

Mr. Cannon briefly reviewed the effort that had been put forth for the past six years and the final presentation to the state of a standard document of building rules and regulations bearing the stamp of approval of the State of Indiana. He readily and freely acknowledged the sponsorship of the move on the part of the A. B. C.'s, attributed it all to an ideal conceived at an A. B. C.'s convention. Those selected to do the actual work of compiling have appreciated the contractors' support and in the final presentation of the document to the state have no apologies to offer. The document is not perfect, but, it is the result of deep research and conforms to the best data available. It is elastic and can be revised to meet changing conditions.

These building regulations as they stand today have enabled Indiana to take the lead among states in the matter of state building provisions and regulation. It is a great stride forward in the establishment of the building industry on a high plane. The speaker likened it all to a new bridge having been put in place and about to be put to use, with everyone tense as to how it would meet the test. There is a flexibility to it all such as is found in no other place in the country and the Administrative Building Council of Indiana, under which the new regulations function is always open to argument for its improvement by the elimination of that which may prove not best for usage, or the addition of better things which may develop.

Matter of Legislative Effort of Utmost Importance to Contractors

An old friend of the Indiana contractors, Attorney Harry A. Fenton, Indianapolis, who has counseled the state association ever since its inception, was next introduced. He congratulated the members of the state A. B. C. on their alertness, what they had accomplished, and urged them to be on guard constantly to protect that which they have gained and ever awake to those things that will make for the advancement of their industry.

He referred to the faithfulness, the loyalty and untiring effort of the men who have represented the contractors in working out a state building code. He pointed to that code as the outcome of legislative effort and through it, he said, had come recognition of the state contractors' association on the statute books of Indiana. That was something of which to be proud, he said, for it has given prestige to the building industry such as it never possessed heretofore.

As an outgrowth of that code has come other ramifications among which are the three proposed bills that would provide for the registration of architects, contractors, and also a state-wide inspection of building construction. These bills reflect credit, Mr. Fenton said, not only on the contractors, but upon the architects, engineers and labor, all of whom have been cooperating to improve conditions in the building field.

The speaker, in parting, advised the contractors to continue to devote attention to legislation, but to be alert defensively as well as offensively, and to be ever ready to rally around when anything inimical came up to threaten their rights.

State Building Congress and Mid-West Building Show

The first day's session was brought to a close by Executive Secretary J. H. Owens, of the A. B. C. of Indiana, who reminded the delegates of another offspring of their association, the Building Congress of Indiana. He explained its plan of organization and function, showed it to be a common meeting ground for Indiana's building interests, an avenue by means of which ideas could be interchanged and a greater co-operation effected between all.

He further told of a scheme being sponsored by the State Building Congress whereby it was proposed to stage a Mid-West Building and Allied Arts Exposition

at the State Fair Grounds at Indianapolis in May.

Adjournment was then taken till Wednesday morning.

Tuesday evening was given over to one of the most enjoyable social functions of an A. B. C.'s convention, a dinner-meeting and entertainment in the Travertine Room at the Lincoln Hotel. William F. King, M. D., of the State Board of Health, was toastmaster, officiating in his well-known snappy and entertaining manner. The speakers were James M. Ogden, Attorney General of Indiana, and A. E. Kemmer, Lafayette, a past president of the A. B. C.'s. Entertainment was provided by the Paramount Artists, a lively and well drilled young women's orchestra, and by Lillian May Hueslein, vocalist. An added attraction was Herman Kotte, Fort Wayne contractor, who was pressed into service and made a big hit with his vocal renditions.

Interest of Delegates Fails to Lessen

The closing day of the convention was given over to business, all of a more or less routine nature, but even at that, interest held strong and the delegates tarried to the finish.

Getting away to a good start, much interesting information relating to the outlook for 1929, the labor situation, the apprentice problem and sundry other items, were advanced by the delegates from the various scattered localities. Generally speaking, the outlook is promising for a good building year ahead, some cities are devoid of promising projects, but the majority of them have indications of a quickening activity in the near future. Wages are likely to continue at the 1928 level in most places, though in some advanced figures have been asked. The most radical change in the prevailing order of things was sounded from Hammond where, it was reported, all building trades mechanics will operate on the five-day week plan after April 1.

State Jurisdictional Awards Board Recommended

Committee reports followed and consisted of reports by the Credentials Committee covering delegates and votes allowed. The Memorial Committee announced the death of seven members the past year and befittingly paid tribute to their memory. The resolutions committee introduced the customary expressions of appreciation to the local press, the convention hotel management, the Chamber of Commerce Convention Bureau and others who aided to make the meeting a success. This committee also recommended that the A. B. C.'s make an earnest effort to encourage apprentices, and also that the state association recommend to the Indiana Building Congress the establishment of a State Jurisdictional Awards Board. All these were adopted unanimously.

The Annual Election

These men were elected to office for the coming year: Elmer L. Danner, Kokomo, President; J. Fred Christman, South Bend, First Vice President; Samuel L. Kirk, Vincennes, Second Vice President; Albert Weinman, Ft. Wayne, Third Vice President; John H. Owens, Indianapolis, Secretary and Treasurer; Harry A. Fenton, Indianapolis, General Counsel.

Vincennes was selected as the site for the 1930 convention.

IN THE THICK OF THINGS

Convention Reflections

Hand the palm to the Ft. Wayne A. B. C.'s. That organization sent sixteen delegates to the state builders' pow-wow.

* * *

And, too, Kokomo deserves special mention. Six contractors from there were interested attendants, and proud, also, as they went home with the new president.

* * *

Ross Esheiman, Anderson, one of the old timers, was on hand early and stayed late.

* * *

Matt Hallenberger "blew in" from Evansville, drew the door and was a regular sergeant-at-arms.

* * *

Not all interest is centered in the larger cities. For instance, there was R. O. Sharp, Camden, the only general contractor in Carroll county, who was very much on hand and took in the whole show.

* * *

Deep regret was expressed on all sides over the recent death of Hnry Knauth, of Vincennes. He was an ardent A. B. C.'s man and his absence was keenly felt.

* * *

It's hard to keep the old boys away. There is James Hodgson, Sr., just back from Florida, and he was there with the bells on pledging again his undying allegiance to the state contractors' association.

* * *

And "Cap" Kemmer, Lafayette, another standy, always there, always active, always smiling.

* * *

If anyone gets a "kick" out of a convention it is Charley Morrow, Muncie. He is here, there and everywhere, all the time, in fact, you can't keep him placed.

* * *

That apprentice school at Ft. Wayne is something for the other cities to copy. Otto Gumper gave "the boys" an earful of select information. It was his earnestness that impressed.

* * *

The attorney-general, James M. Ogden, gave the evening dinner crowd plenty of material on Indiana upon which to rebuild state pride.

* * *

Though off to itself, the Calumet District never fails to show its interest in State A. B. C.'s affairs. The regular emissary, E. E. Cole, Hammond, was on hand as usual.

* * *

The Terre Haute twins, "Ott" and "Frank," were present also.

* * *

Sam Kirk was busy talking the Clark Sesqui-Centennial at Vincennes.

* * *

It was a big game putting across the convention, but the Executive Secretary, J. H. Owens, did it in great shape. The bigger the job the better he likes it.

CRAFTSMEN AGAIN REWARDED

Quality Work Draws Public Recognition

The Indianapolis Building Congress, following up its policy to encourage good craftsmanship by building trades mechanics, presented certificates and gold buttons to the finishing trades on the new L. S. Ayres Building Friday, February 1st, at the new building. The men who were selected for meritorious work were: B. R. Miller, electrician; Earl Myers, plumber; Bennett Williams, steam fitter; Thos. E. Edwards, sprinkler fitter; John Ross, plasterer; Frank McClintock, painter; Carl Kruger, sheet metal worker; Oliver Tucker, marble layer; W. V. McAlpin, elevator constructor; Don Rucker, roofer; Giles Davis, tile setter; Tony Louisa, terrazzo layer.

The Committee of Award, who selected the outstanding mechanics, is composed of A. V. Stackhouse, chairman of the Committee on Recognition of Craftsmanship of the Building Congress; Fred Ayres, L. S. Ayres & Co., representing the owners of the building; Arthur Bohn, Vonnegut, Bohn & Mueller, the architects for the new structure; E. C. Strathmann, Strathmann Construction Co., representing the builders; Charles Wilson, representing Labor on the Recognition of Craftsmanship Committee.

Mayor L. Ert Slack was the chief speaker at the ceremony. Other talks were made by President Robert Frost Daggett, of the Congress, and members of the Committee of Award. In addition to receiving the certificates and gold buttons the honor craftsmen were made honorary members of the Indianapolis Building Congress without payment of dues.

TO FURTHER YOUR PROFESSION

This Regards the Indiana Architect and Intent of the Indiana Society of Architects

The time is almost here, that period to which some Indiana architects look with eagerness and others not at all. We can understand the former, but the latter—no.

There is one indisputable fact, the Indiana Society of Architects seeks, has sought and will continue to seek to do good for the architectural profession of the state, it is consecrated to that one purpose above all, and to its credit has a record that is commendable. All this in the face of a more or less desultory support despite its years of existence and evident effort of sincerity. All architects may not agree with everything advocated, but there is no denying the aims sought are backed by a sincerity of purpose. Never has there been a semblance of selfishness to which any one could clearly point, rather, every move bespeaks pride in the profession and an endeavor to further its interests and those therein engaged. The benefits that thus accrue to the profession are the kind that can't be bought.

And, to further the cause, the Indiana Society of Architects will hold its annual meeting again Friday and Saturday, February 8 and 9, at the Columbia Club, Indianapolis. Friday there will be a directors' meeting in the morning, a general luncheon at noon, a business meeting in the afternoon, and I. S. A. members will be the guests of the Indiana Chapter, A. I. A., that evening, for which a special program has been arranged.

On Saturday there will be a meeting of the new directorate, a noon luncheon, and the formal opening of the annual architectural exhibit at the John Herron Art Institute.

As a closing feature there will be a 6:30 P. M. dinner at the Columbia Club, at which Harry G. Leslie, Governor of Indiana, and Earl H. Reed, Jr., Chicago, head of the architectural course of Armour Institute, will be the guests of honor. Mr. Reed will speak on "The Tendencies of Modern Architecture." Also thre will be music and entertainment.

STARTS ENCOURAGINGLY, BUT LEAVES US IN A QUANDARY

Looked As If Billican Might Come East, But Now We're Not Sure

"Dear Caleb:

If Albuquerque has any thick, warm suspenders—so I can keep warm back in Indianapolis, I want to come back and attend the Mid-Winter meeting and overlook the Exhibit at the Art Institute. I want to shake hands with the boys and particularly that Guy from Logansport who thinks I know how to stir up Chow-Chow without any food in it.

Well Caleb, I am glad you got two fellows who had the nerve to take their pen in hand and say something for the good of the order.

How are Warren Miller and Merritt Harrison getting along with the new License Bill? Guess they must be getting along fine—for they have not accepted my offer as a good man to help out in a pinch.

Well, I hope they put this law over so we can say to those Michigan and Illinois 'birds'—Fly away you long bills to your own roosts and give us a chance. We have no gratitude for the fellow who will not let us play in his back yard and wants to hog everything in sight in our State.

Well Boy: I wish you were out here in this country—sportman's paradise—where you can see game on every hand. You know back in Indiana you have plenty of HUNTING—but it's hard to see the game.

I understand just now its hard to find a good commission where you can make any money. Well, out here on the edge of civilization you don't have to worry about the draftsman's pay envelope each Saturday night—you just let the night envelope you while you sit and meditate in the great open space about you. It just brings contentment and relaxation. When you wake up you receive notice from the inner man who is calling for RED MEAT—so Caleb, I must see what the Camp Cook has up his sleeve (it might be a dirty arm). At any rate I have a hankering for food most of the time out here. It's hard to make it out—it may be the Rest and Play that soothes my nerves and puts that good taste in my mouth.

Here is wishing you success in election and a successful Mid-Year Meeting.

Yours for more food,

BILLICAN.

NOT OUR FAULT

But, He Is Coming Back

It looked like anything but an ink spot this week to us, in fact, your page had all the earmarks of a big immaculate white sheet of paper.

We missed Palladio terribly, and so do you, undoubtedly. He just "ducked" for business reasons, left the city, and us, too, high and dry.

But he'll be back ink-spotting next week, so, cheer up for the time being if you can. He should be good following his lay-off and, oh, what he will do when he gets to slinging copy again.

STEEL INSURES STRENGTH AND SECURITY

ECONOMY

Saving $300,000 for the taxpayers is one tremendous public service rendered by the Board of Public Works of Indianapolis, when they changed the specifications on the new White River bridge to read—"steel girders" instead of the material originally called for. Not only does the use of steel effect this highly desirable economy in public expenditure, but it also insures far greater clearance in the waterway. Moreover, this bridge built of structural steel will give longer service, at less upkeep expense, than any other material that could be used.

Far-sighted, clear-thinking engineers and public servants, as well as those who plan almost any type of building, invariably recognize steel as the most economical, strongest and safest, material. Steel serves best—it never fails.

Jan. 19-26, Feb. 2

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned that the township trustee of Smithfield School township, DeKalb county, Indiiana, at the school house in the town of Ashley, DeKalb county, Ind., will receive sealed proposals for repairing the school house in said town of Ashley, and building an addition thereto as set out in the plans and specifications now on file in the office of the undersigned trustee.

Said sealed proposals will be opened and the contract awarded for said improvements on the fourth day of March, 1929. Bids or proposals will be received up to 10 o'clock A. M., on said date.

The said improvements is located in Ashley, DeKalb County, Indiana, on the grounds now used for school purposes in said town.

The estimated cost of said improvement is $38,000.00.

Bids will be for the completion of said improvements in accordance with the plans, profile and specifications in the office of the undersigned trustee and shall include all labor and materials for said work.

Each bid shall be accompanied by a personal or surety bond in a sum equal to double the amount of the bid filed for the work bid on, to be approved by the undersigned trustee and shall be conditioned for the faithful performance of the work; the sureties, if personal, shall be resident free holders of the state of Indiana, one of whom shall be a resident of DeKalb County, and said bond shall further be conditioned as provided by law or said bidders shall be required to accompany his bid by and with a certified check as required by law, that he will enter into the contract if awarded to him. Said bidder will also be required to accofpany his bid with a non-collusion affidavit, as required by law.

The undersigned reserves the right to reject any and all bids.

AUGUST KUCKUCK,
Trustee Smithfield School Twp.
C. M. FUNK,
FOREST MILLER,
FRANK W. GFELLER,
Township Advisory Board.
Feb. 2.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Chester School Township, Wabash County, Indiana, will receive sealed bids at the office of the undersigned trustee on Walnut street in the town of North Manchester, in said township, county and state, up to 11 o'clock A. M., Thursday, February 14th, 1929, for the furnishing of all materials and performing of all labor for the construction and completion of a new two-story and basement school building in the said Chester Township, county and state, above mentioned.

Such work will be under and according to plans and specifications heretofore approved and now on file in the office of the State Board of Accounts, of the State of Indiana, and in the office of the undersigned trustee, and in the office of Everett I. Brown, architect, 309 First National Bank Building, Fort Wayne, Indiana.

Copies of plans and specifications will be furnished by said architect to reliable contractors applying for same.

All bids shall be made upon form No. 96 bidding blanks and be accompanied by non-collusion affidavit. Each bid shall be accompanied also by a certified check upon a solvent bank, payable to the order of Charles Wright, trustee, in an amount equal to five per cent (5%) of the total amount of the bid, as a guaranty that the contractor will, if awarded the contract, enter into a written contract for the performance of such work and furnishing of such materials, with said Chester School Township, Wabash County, Indiana, and furnish a surety bond in a penal sum equal to the contract price, all to the satisfaction and approval of the said trustee and advisory board, within ten days after such award.

If for any reason the bidder shall fail to enter into such proper contract, or shall fail to furnish said bond as above set out, then the full amount of such certified check shall be retained by the School Township as liquidated damages. The estimated cost of said building is $108,000.00.

Said building is to be erected on the site now occupied by the Chester Township High School building and such suitable material as may be approved by the architect and the owner may be used by the contractor in the erection of the new building; bids therefor shall be made in accordance with the specifications.

Separate proposals will be received in the following manner:

1. General construction.
2. Heating and ventilating.
3. Plumbing and sewerage.
4. Electrical.

Bids will be considered on any of these contracts separate or any combination of them.

The undersigned trustee and advisory board reserve the right to reject any and all bids, or any part of any bid, and hold same for investigation of all bids and bidders, and to waive any defects and informality, if deemed in the interest of said School Township and the bids to be submitted hereunder are received subject to the sale and delivery of a bond issue of $108,000 for the purpose of raising funds to pay for said building.

JURISDICTIONAL DISPUTE IN BUILDING CONSTRUCTION FIELD A SERIOUS LATENT THREAT THAT MUST BE ELIMINATED

National Association of Builders Demands That Labor Assume Its Responsibility In Remedying the Evil

Builders everywhere and others allied with the building construction industry are awake to the fact that the greatest menace to the industry today lurks in the the current condition wherein there is little or no means of controlling jurisdictional disputes that may arise at any time between the various building trades mechanics. This is a lamentable situation indeed when one considers that an industry of the extent and scope of that of building construction must face such a threat with no power to protect itself from the whims or fancied wrongs of certain trades. If two of them happen to get into an argument they can upset the whole industry.

Some years back a realization of what an economic waste the jurisdictional dispute was to the industry led to the establishment of a National Board of Jurisdictional Awards. This body was backed by the American Institute of Architects, the American Society of Mechanical Engineers, and the Building Trades Department of the American Federation of Labor. The board functioned for several years to advantage, but became practically useless several years ago when it was repudiated by the A. F. of L., which withdrew its support.

Since then jurisdictional disputes have occurred and the menace continues to grow. Efforts have been made to enlist the support of the American Federation of Labor in preventing such disputes, but Labor has shown no eagerness and little interest to co-operate in the matter.

Last week at Indianapolis the delegates to the convention of the Associated Building Contractors of Indiana devoted considerable attention to the jurisdictional dispute subject and went on record as favoring the sponsorship of a State Jurisdictional Awards Board by the Indiana Building Congress and the furthering of an effort to establish such a body.

All of which is of vital importance to the building industry of Indiana.

The seriousness of the situation was readily acknowledged at the annual convention of the National Association of Building Trades Employers held recently at Chicago. The delegates minced no words in blaming Labor for present conditions and came out point blank in demanding that Labor take steps to help to remedy matters.

The following resolution was adopted unanimously:

"WHEREAS, One of the most flagrant and least necessary of all of the disturbing influences confronting the construction industry is due to the ridiculous quarreling and bickering between leaders of labor in the United States over the question of which two or more trade unions belonging to the same national group shall do a given piece of work, and

"WHEREAS, For a number of years these jurisdictional disputes were dis disputes weer disposed of by a board of experts generally to the satisfaction of the construction industry, and

"WHEREAS, The Building Trades Department of the American Federation of Labor, unable or unwilling to resist the insistance of some leaders, capitulated to their demands and withdrew from this board, the only sound and honorable group for the National adjudication of jurisdictional disputes ever devised in the construction industry, and

"WHEREAS, This policy on the part of the Building Trades Department of the American Federation of Labor has thrown open the entire field to graft and unfair practices through jurisdictional disputes, and

"WHEREAS, Not satisfied with this injury to the construction industry to the detriment of all concerned, they further throw the industry open to further disturbances and financial losses by their action in the New Orleans convention, in which they not only again reiterate their withdrawal from the National Board for Jurisdictional Awards, but rule further they will not permit local boards made up of local building trades council and employers to dispose of jurisdictional issues for their own community, and

"WHEREAS, This unsound and uneconomic, as well as unfair action upon the part of the building trades department is an invasion of the rights of persons in the construction industry:

"THEREFORE, BE IT RESOLVED, That this conference of the building industry held in the City of Chicago does hereby protest against those various actions of the Building Trades Department of the American Federation of Labor, contemplated only to keep the industry in disturbance and turmoil for the furtherance of its internal politics.

"BE IT FURTHER RESOLVED, That we herewit hdemand of the Building Trades Department of the American Federation of Labor that it immediately signify its intention in co-operation with the other factors of the construction industry to set up the necessary machinery to dispose of disputes of this kind to prevent strikes and discord within the industry and to build up that industry into a sound and co-ordinating force in the public service."

If ever a handicap was saddled upon an industry it certainly was when the jurisdictional dispute came into being, and for the welfare of those engaged in the industry it is incumbent upon each and every interest and the allied whole to exert every means at hand to root out the jurisdictional canker.

THE I. S. A., 1928-1929

Glancing Back Over the Year's Activities

In keeping with the inclinations which seem to govern this age of ours, the Board of Directors of the Society decided to summarize the reports of the various committee chairmen, and to submit to the membership this simmered-down report.

The privilege of editing this report might ordinarily be looked upon as a rather negative privilege, but in this instance it proved to be a real and positive thrill. The favor of reading these reports and of being awakened thereby to the season of constructive accomplishment through which the Society has just passed is an experience which we wish each member could have. It is hoped that we may, to some extent, pass this experience on to you in this shortened report.

Here is the roll call of accomplishment. We will read it off in brief sentences and elaborate a little. As we read this list we are sure that by the exercise of a bit of imagination you can visualize what it means for Architecture and Indiana. And we call your attention to the strong thread that runs through each report binding the mall together in one big idea. It might rightly be entitled "The Beginnings of a United Building Industry of High Ideals in the State of Indiana." That sentence is the theme of our report.

New Committees

There are two committees whose work is incomplete and who therefore cannot report at this meeting. One is headed by D. J. Zimmerman to prepare membership cards and certificates, and one is headed by Herbert Foltz to consult with the State Library Board and Historical Commission, relative to the construction of a new State Library.

Entertainment and Exhibit

The entertainment committee, headed by Kurt Vonnegut, and the exhibit committee, headed by Ed Pierre, are each in the fortunate position of rendering their report by demonstration. The convention is theirs, and what you see, hear and eat here constitutes their report.

Membership

Three distinct features stand out in the membership report of George Allen. First, a new method of obtaining members, by districting the state with a captain for each district and a thorough canvass. Second, seventeen new active members and nine new junior members. Third, a lack of real earnest help on the part of the membership. Without Mr. Allen's committee, which constantly feeds the society its new and we hope active members, the Society might just as well lay down and die.

Standardization

This committee, under the leadership of L. A. Turnock, proposes to doctor up all the multifarious ills existing where the architect and the contractor come in contact. This committee is working with a similar committee for the Contractors' Association and here is their program:

1. Outlining minimum requirements for complete plans and specifications.

2. Revision of A. I. A. Standard Documents to conform to Indiana law.

3. An outline of the relationships of the architect, general contractor, sub-contractor and engineer.

4. New architects' contract form on state work.

5. Recommended procedure of receiving and awarding bids.

6. Establishment of recommended agreement between I. S. A. and A. B. C. for filing lists of sub-contractors at time of filing bids.

7. Investigation of State Board of Accounts Bid Form for Public Works.

This is a tremendous program and when it is completed and broadcast among our membership it will lessen the entanglements of red tape and increase efficiency.

Handbook

This committee is also headed by L. A. Turnock, and the book filled with absolutely new material that has never appeared in it before is about ready to go forward to you. It will speak for itself in loud and positive tones.

Building Code

Fermor Cannon, as chairman of our representatives on the Advisory Board of the Administrative Building Council, has spent years of intensive effort which now has its function in actual accomplishment.

The State Building Rules and Regulations, with the exception of the chapters on Elevators, Heating and Ventilating, are now complete and in your hands. The Society is proud to sit in the place of reflected distinction which comes from the things done by the Building Council. And here again we see the results of a United industry working together for the good of the entire industry. Mr. Cannon reports that the element which contributed most largely toward the success of this work was the co-operative effort of the Architects, representatives of the Contractors, Labor and Engineers.

And the interesting item of this report is that not content with just providing the rules and regulations, the Building Council has a farsighted program pointing toward making these rules effective. The steps in this program consist in sponsoring bills before the State Legislature providing for (1) an Inspection Bureau (2) Licensing of Contractors and (3) Licensing of Architects, this last bill being our own pet, prepared by our own legislative committee.

Legislative Committee

The legislative committee has been under the direction of Warren Miller. And

(Concluded on Page 6, Col. 1)

here behold once more a United Industry working together for an item that the entire industry conceives to be a distinct improvement. Our legislative committee considered it to be good politics, good sense, and good co-operation to present its legislative program through the medium of the Indiana Building Congress. After being criticised because it did not have claws as well as teeth, the bill is now going before the Legislature with the support of the entire building industry of the State of Indiana, aggregating 40,000 men.

We will not trace in detail the devious path which the bill took to arrive in its present form. It started out as an amendment to the present Engineers' Law. It went through discussion in the Building Congress and has been presented by the Building Congress all over the state. It even had the temerity to appear before the engineers themselves. It was batted about in the meetings of our own Board of Directors, where it was gone through word by word, and finally given the unanimous approval of the board. It now makes its appearance as a separate Registration Law patterned after the Illinois law, which is probably the most successful in the country. It looks as if it would go through. We're proud of our legislative committee.

Indiana Building Congress

We could not complete the picture of a United Building Industry without mentioning the Indiana Building Congress. We can take some credit for it. It was largely given birth to by this organization and it was certainly nursed along and fathered and mothered by one of our past presidents until now it is an accomplished energetic fact in the affairs of Indiana. The credit for making it so belongs to Merritt Harrison, its President, and Jack Owens, its Secretary.

Conclusion

In concluding our report let's underline the same thought which inaugurated the report. The accomplishment of this administration has been a reaching out toward a United Industry whereby the standards of the business might be raised to a high level.

To summarize: (1) A meeting of minds with contractors and sub-contractors in the standardization of practices. (2) Building Rules and Regulations and means to make them effective through the efforts of all branches of the business. (3) An Architects' Registration Law approved by the entire industry as an uplift measure.

It is not possible to see through the haze of a previously slip-shod, disjointed fashion of carrying on the profession of building, the brightness of a coherent industry doing business on a high plane of professional practices? We may be mistaken, but we think that we see just ahead of us a bright future for those who love and honor our profession.

These are the accomplishments of our ever modest President, Karl Norris, and his administration.

WORTHWHILE APPRENTICE MOVE STARTED AT FT. WAYNE

State Contractors May Well Follow Upstate Effort

One of the big problems of the building industry today, and one that has a serious bearing on the future has to do with the ever-increasing limited supply of skilled building trades mechanics. The problem concerning builders is how to check the demand and they are pondering that matter the country over and seeking, earnestly, means by which apprentices may be encouraged to enter the trades and be skillfully trained so that they may become competent artisans.

Such being the case, the message brought to the annual convention of the Associated Building Contractors recently at Indianapolis by the delegation from Ft. Wayne was indeed gratifying in that it clearly set forth the fact that in that city a determined apprenticeship effort is being exerted by the contractors.

It fell to the lot of George Schack, secretary of the Ft. Wayne A. B. C.'s, to make the pleasing announcement that the members of his organization, particularly the brick mason contractors, were awake to the situation and were earnestly engaged in a mission to relieve it.

"A year ago," he said, "the mason contractors and representatives of the Bricklayers' Union got together for a discussion of the subject and all decided the apprentices should go to school to learn the theoretical side, as well as the practical. An Apprentice Board was organized, consisting of three contractors and three union representatives. An exhaustive search for text books on advanced methods and the efficiency and suitability of materials was in vain; there didn't seem to be any anywhere. However, the classes were launched anyway.

"While seeking to train the boys for the industry, there is a human element back of the effort, an element that has been lost sight of by many contractors. The Ft. Wayne men believe that by taking care of the boy they are not only reinforcing the future dependency the building industry must place on him, but they are establishing him on a self-sustaining honorable basis which means a desirable citizen in the years to come. Then, too, such education and training will qualify the boy for more responsible work on the job, such as foreman or superintendent. Thus qualified, he will have greater opportunities, for such positions are constantly looming up and many men on the job are not in a position to handle the administrative features entailed."

At this juncture Mr. Schack introduced Otto Gumper, mason contractor and instructor of the Ft. Wayne apprentice classes, who explained what was being sought.

The speaker acknowledged the invaluable aid extended by George K. Wells, State Supervisor of Industrial Education, and also the whole-hearted co-operation given by the Bricklayers' Union. The school as now conducted is an evening affair consisting of two-hour sessions once a week. In addition to a study of plans, details, etc., and practical bricklaying, Mr. Gumper said he was seeking to instill into the boys the idea of responsibility and the fact that work is honorable, that it is more than just putting in so much time for mere remuneration. Further, he added, we want the boys to learn to feel pride in accomplishment for that makes for fine and artistic work."

The speaker combatted the argument that community interest won't warrant the effort toward industrial training and education by referring to the Cleveland apprentice school where seven hundred boys and young men between the ages of 16 and 24 are enrolled in classes.

"There is one thing about it all," said the speaker. "The boys appear to be willing if they are approached properly. Also, educational authorities are quite receptive to the idea and deeply interested, the unions are backing the effort and in the end we will have better types of men.

"Contractors must be willing to share

the burden; theirs will be the profit, and, what fairer than to give the boy a chance? Slip-shod workmen make slip-shod citizens. The whole thing works out for the good of all.

"Apprentice training is easily possible, but, it must be orderly; it must be handled and conducted in a systematic way. Ft. Wayne has made the start and if her example will awaken other contractors to the issue, if she can contribute enlightenment to the cause, great will be her satisfaction."

MASON CONTRACTORS TO HOLD NATIONAL GATHERING AT WASHINGTON, D. C.

Many Indianans Figuring On Attending

The big event of the year for the mason contractors comes off next week, Feb. 11, 12, 13 and 14, at Washington, D. C., where the Mason Contractors Association of the United States and Canada will hold its annual convention.

This is one of the strong contractors associations of the country and its yearly meetings attract hundreds of masons from cities covering a wide territory. It is a live, wide-awake body seeking earnestly to encourage to the fullest extent harmonious relations between employer and employe and in other important ways further those things that will work to the good of the building industry.

Many vital subjects are on the program for discussion and quite a few Indiana masons are prepared to make the journey east. Among those from Indianapolis leaving Saturday for the convention city are Mr. and Mrs. Wm. Nunamaker, Mr. and Mrs. Edward Dux, Mr. and Mrs. Elmer Ittenbach, Mr. and Mrs. Leon Joyce, Mr. and Mrs. Harry Fenton and James Hodgson, Sr.

ANOTHER DROP RECORDED FOR BUILDING

Capital City Volume For January Trails That of a Year Ago By a Wide Margin

The building lull that set in in Indianapolis in the late fall and early winter continued right on without check in January. Active operations fell off even more so than ever last month, the business for the month being the least in over a year.

Had it not been for new residences launched the building business would have been almost at a standstill. As it was, the total estimated valuation of new work passed upon by the City Building Inspetion Department only ran up to close to $600,000. This was 56.9 per cent less than the figures for the corresponding period a year ago. The issuance of permits was 280 below that recorded in January, 1928.

The official analysis of the work that passed through the department, according to Mrs. Clara Oxley, statistician, is as follows:

Type of Work	Per.	Est. Val.
Accessory Buildings	39	$ 54,600
Business Buildings	9	146,500
Dwellings	52	253,500
Miscellaneous	246	52,529
Industrial Buildings	1	7,500
Repairs	125	80,379
Total	472	$595,008

BUSINESS PERSONALS

George Lacey, for many years connected with the Indianapolis Terra Cotta Co., has severed his connection with that firm and is now in charge of the Indianapolis agency of the Midland Terra Cotta Co., of Chicago.

Will Thurgood, well known among Indiana architects and contractors; D. Sheerin, Indianapolis manufacturer, and Mamie L. Bass, formerly a partner in the architectural firm of Bass-Knowlton & Co., are now associated in business under the firm name of Resilient Floors, Inc., with offices in the Darrach Building, Illinois and 15th street, Indianapolis.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

STEEL *Permits Rapid, Inexpensive Alterations*

All the characteristics of every member of a steel structure are known. Alterations to a steel building can be made rapidly, economically, and with perfect assurance of security.

The stresses in steel members are computed when the building is designed. The strength of structural steel is a definite, consistent figure. Alterations or additions can be planned with the same mathematical accuracy, and carried out with the same speed and economy, that saved time, labor and material in the original structure.

A steel building is altered by connecting new members, of the proper size, to the original frame, and so making a component part of the building. Extensions or alterations to structures built of other materials do not have the advantage of complete unity and consolidated strength that is made possible by structural steel.

NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the Union Township School Building Company, of Union Township, Elkhart County, Indiana, that on Wednesday, February 27, 1929, at 10 A. M. at the office of the County Superintendent of Schools in the Court House in the city of Goshen, Indiana, they will receive sealed bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage, and electric wiring of the new Union Township Consolidated School building. According to the plans and specifications prepared therefor by Henkle & Henson, Architecas and Engineers, of Connersville, Indiana, and adopted and approved by the Building Company, likewise the various Boards of the State of Indiana.

Plans are now on file in the office of the County Superintendent of Schools in Goshen, Indiana, likewise the office of the State Board of Accounts.

Copies of plans may be had upon depositing a check for $25.00 with the Architects, which amount will be returned in full providing plans are returned and a bona fide bid entered by 10 A. M., February 27.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 3 per cent of said bid. These checks are to be made payable to Verne Stahly, President of the Union Township School Building Company. And will be held by the Building Company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute assurity bond for the full amount of his bid. The check of those bidders who fail to be awarded a contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute assurity bond then he or they shall forfeit the amount of their certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Union Township School Building Company.

Dated this 5th day of February, 1929.

VERNE STAHLY,
President.
ORVILLE McDONALD,
Vice President.
MERVIN E. ANGLEMEYER,
Secretary-Treasurer.
HENKLE & HANSON,
Architects.
Connersville, Indiana.

February 9-16-23.

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Chester School Township, Wabash County, Indiana, will receive sealed bids at the office of the undersigned trustee on Walnut street in the town of North Manchester, in said township, county and state, up to 11 o'clock A. M., Thursday, February 14th, 1929, for the furnishing of all materials and performing of all labor for the construction and completion of a new two-story and basement school building in the said Chester Township, county and state, above mentioned.

Such work will be under and according to plans and specifications heretofore approved and now on file in the office of the State Board of Accounts, of the State of Indiana, and in the office of the undersigned trustee, and in the office of Everett I. Brown, architect, 309 First National Bank Building, Fort Wayne, Indiana.

Copies of plans and specifications will be furnished by said architect to reliable contractors applying for same.

All bids shall be made upon form No. 96 bidding blanks and be accompanied by non-collusion affidavit. Each bid shall be accompanied also by a certified check upon a solvent bank, payable to the order of Charles Wright, trustee, in an amount equal to five per cent (5%) of the total amount of the bid, as a guaranty that the contractor will, if awarded the contract, enter into a written contract for the performance of such work and furnishing of such materials, with said Chester School Township, Wabash County, Indiana, and furnish a surety bond in a penal sum equal to the contract price, all to the satisfaction and approval of the said trustee and advisory board, within ten days after such award.

If for any reason the bidder shall fail to enter into such proper contract, or shall fail to furnish said bond as above set out, then the full amount of such certified check shall be retained by the School Township as liquidated damages. The estimated cost of said building is $108,000.00.

Said building is to be erected on the site now occupied by the Chester Township High School building and such suitable material as may be approved by the architect and the owner may oe used by the contractor in the erection of the new building; bids therefor shall be made in accordance with the specifications.

Separate proposals will be received in the following manner:

1. General construction.
2. Heating and ventilating.
3. Plumbing and sewerage.
4. Electrical.

Bids will be considered on any of these contracts separate or any combination of them.

The undersigned trustee and advisory board reserve the right to reject any and all bids, or any part of any bid, and hold same for investigation of all bids and bidders, and to waive any defects and informality, if deemed in the interest of said School Township and the bids to be submitted hereunder are received subject to the sale and delivery of a bond issue of $108,000 for the purpose of raising funds to pay for said building.

Signed and dated at North Manchester, Indiana, January 21st, 1929.

STATE ARCHITECTS IN ANNUAL MID-WINTER SESSION

Regular Gathering of Indiana Society of Architects Attracts Many of the Profession to Indianapolis—George W. Allen, LaPorte, Elected President

The sincere and determined desire of the members of the Indiana Society of Architects to protect and advance the interests and welfare of the architectural profession in Indiana, a deep appreciation of what the Society means to the profession, and a will on the part of the members to co-operate with allied building interests for the advancement of the building industry of the state as a whole, was clearly and impressively evidenced at the twelfth annual mid-winter meeting of the Society held at the Columbia Club, Indianapolis, February 8 and 9.

Architects from fifteen cities numbering approximately seventy, close to fifty per cent of those in the state, practicing architecture exclusively, registered during the two days session and took a keen interest in the proceedings at one time or another. The cities represented were: Attica, Connersville, Crawfordsville, East Chicago, Evansville, Fort Wayne, Frankfort, Gary, Indianapolis, Lafayette, LaPorte, Logansport, Michigan City, Terre Haute and Vincennes. This was one of the best, if not the best representative territorial turnouts ever recorded at an I. S. A. meeting and was encouraging not only to those of the old administration but especially to those who are assuming the duties of the new administration.

Retiring Directors Hold Final Meeting

Preliminary to the regular sessions the Board of Directors met at 10:30 a. m., February 8th, heard committee reports, cleared up all current business and mapped out a general program of business for the mid-winter meeting to follow. At the conclusion of the session President Karl D. Norris, East Chicago, briefly reviewed the activities of the year, complimented the retiring board members on their efforts and expressed his deep appreciation of the co-operation they had extended to him in his attempt to give the Society a live administration.

Attention Focused on Proposed Architects' Registration Bill

At noon there was a luncheon at the Columbia Club for delegates and visitors which was well attended and served to acquaint those from about the state with each other. Chief interest centered upon the proposed Architects' Registration Bill which is to be introduced for passage at the current session of the State Legislature. Architect Merritt Harrison, Indianapolis, president of the Indiana Building Congress, a body which made an active campaign throughout the state to elicit the support of Indiana building interests in the passage of this bill and two others, one for the Registration of Contractors, the other for the state-wide building construction inspection, briefly explained the most important features of the architects' bill.

The high spots of the speaker's remarks were, in part, as follows:

Purpose

The purpose of this act is to safeguard life, health and property in the planning, designing and construction of buildings costing more than $7,500.00 and not used outside of the corporate limits of cities or towns for agricultural purposes.

(See last paragraph Section 18, Section 24.)

No New Board Created

The registration board for the examination and registration of architects is appointed by the administrative building council of Indiana from the advisory committee of this council, which makes it a non-political board.

The advisory committee of this council is composed of three architects, three engineers, three contractors, and three craftsmen, who are appointed by the governor and serving upon this board. They are known as the technical staff of the administrative building council. From among these, will be selected five men who are to examine and register architects. This administrative building council was created and established by chapter 64 of the acts of the general assembly of 1923.

(See Section 2, third paragraph in Section 22.)

No Expense to the State

Fees required for registration, renewal and application, are $25.00 each. As there are 125 to 150 architects in the state, this will provide an estimated amount of approximately $3,000.00. There will be five members on the board, each receiving $10.00 per day during the time that they are holding a session. Two sessions a year are required, which would mean $50.00 a session, or for the year $100.00 for the required sessions.

The secretary's salary is determined by the board, and on account of duties with the administrative building council, a part time secretary can be used, which would hold the expense to a minimum. After the first two years and the exact amount of expense is known, then the fees required for registration, renewal and application for examination can be reduced to what is necessary to properly administer the act.

Applicants

There are three classes of applicants:

(A) Those who are in practice at the time the act becomes a law.

(B) Those who have had more than ten years proved architectural practice in their profession.

(C) Those who have had less than ten years proved architectural prictice in their profession.

(a) These applicants, on account of the fact that they are in practice at the time the act becomes a law come under

what is known as the "grandfather" clause, and therefore are given registration without examination, provided they make application within one year from the date that this act becomes a law.

(Section 12.)

(b) After the act becomes a law, if an applicant desires to practice and has had more than ten years of experience, or if the applicant happens to come from some other state where there is no registration laws and desires to practice, he may be granted a license upon presenting to the board exhibits of his work and receiving from the board a quiz concerning his ability as an architect. It is not necessary for him to take a written examination.

(Section 9.)

(c) Those who have had less than ten years proved architectural experience must take a written examination. They are examined in their ability in the planning, specifying, designing, and construction of a building, upon the strength of building materials, upon the principles of sanitation and ventilation, and upon the ability of the applicant to make practical application of his knowledge in the ordinary professional work of an architect.

(Section 9.)

Among the states requiring an architect to be registered or licensed, are Illinois, Michigan, New York, Wisconsin, California, Florida, Pennsylvania.

Reciprocity

It is provided that those states that have registration laws are equal to standards established under this act.

Section 8.)

Retired Architect

An architect may retire for a period of not more than five years and have his certificate renewed without re-examination.

(Section 14, 2nd paragraph.)

Architects See Legislature in Action

This digest of what was sought aroused enthusiastic interest those present being convinced that at last the architects were on the right track and had drafted a bill to which little objection could be offered. It was moved, seconded and carried that the architects present, a representative group of the state profession, visit the statehouse and seek to meet the representatives from their various districts, talk over the proposed bill, explain its purpose and encourage support of the measure. Thus it was all the delegates went over to the capitol in a body where they spent the afternoon at the House of Representatives meeting and consulting with their respective representatives and otherwise becoming interested spectators of the grinding of the legislative mill. This unscheduled procedure intervened to upset the regular program plan necessitating the postponement of the afternoon session to Saturday morning.

Indiana Chapter, A. I. A., Includes I. S. A. Members in Mid-Winter Meeting

The delegates of the I. S. A. were the guests of the Indiana Chapter, American Institute of Architects, at an informal dinner Friday evening, February 8, and sat in at the regular mid-winter meeting of The Chapter held later. This affair was at the Columbia Club also, and while mostly of a business nature was interesting to guests in that it brought out the serious and intelligent endeavors of The Chapter and the Institute in the cause of advancing the practice and profession. Added feature attractions were several moving picture films depicting the manufacture of hydrated lime and also white lead.

Down to Real Business

Eager to get down to business and clean the slate by noon so as to be able to spend the afternoon out at the John Herron Art Institute, there to formally open the Annual Architectural Exhibit of the Indiana Society of Architects, the delegates pitched in with a will Saturday morning when President Karl Norris called the meeting, postponed from Friday afternoon, to order.

Attractive Composite Report on Work of Committees Proves Worth of a Wide-Awake Secretary

Ordinarily committee reports, at best, are in the mean inclined to tedium, but, thanks to the foresight and ingenuity of that most capable, efficient and enterprising secretary George Caleb Wright, the reading of the annual report was most refreshing, entertaining and interesting. Preparatory to the meeting he secured report data from each standing committee, boiled it all down, compiled the resitee, boiled it all down, compiled the resi- due in compact and enlightening form and in the final official presentation offered an attractive and concise document that clearly and pleasingly set forth the activities of the year convincingly. Especial notice was taken of the secretary's effort for which he was highly commended as well as for his faithful and untiring efforts throughout the year. His report was produced verbatim in the February 9th issue of the Recorder.

Election of Officers

At the opening of the morning session a committee of tellers, consisting of Guy Mahurin, Ft. Wayne; A. G. Bacon, Evansville, and A. A. Honeywell, Indianapolis, was appointed to count the mail ballots which were cast for the annual election of officers. However, the two nominees for president had made a request that the votes for the office not be counted.

With other business out of the way, the delegates grew impatient for the report of the tellers, from whom no word had been received, and President Norris delegated L. A. Turnock to locate the committee. "Lew" is some sleuth and returned shortly with the missing tellers who announced the result of their count. Kurt Vonnegut's motion to declare the office of president vacant was carried and he immediately placed the name of George Allen, LaPorte, in nomination for the office. It was then moved and carried that nominations be closed and the secretary was instructed to cast a unanimous vote for Mr. Allen.

The officers for the ensuing year are:

President—George Allen, LaPorte.

First Vice-President—Rodney Leonard, Frankfort.

Second Vice-President—Edward D. Pierre, Indianapolis.

Treasurer—August C. Bohlen, Indianapolis.

Secretary—George Caleb Wright, Indianapolis.

Directors—(Two years) Herbert Foltz, Indianapolis; Warren Miller, Terre Haute; Walter Scholer, Lafayette. (One year) Lee Burns, Indianapolis; Willard Osler, Indianapolis; Ralph O. Yeager, Terre Haute.

Then followed a general discussion on varied lines relative to how best to extend I. S. A. memberships throughout the state, reference to local city associations, what had been accomplished in that direction at Evansville, which is organized one hundred per cent, and other topics of varied natures. This concluded the business session which adjourned at noon.

A special luncheon was served at the club again for the delegates, at which several more architects, who had been unable to attend the morning session, joined in.

The feature of this occasion was a short talk by Earl H. Reed, Chicago, head of the architectural course at Armour Institute. Mr. Reed was in Indianapolis to act as judge of the Annual Architectural Exhibit and make the I. S. A. gold medal and certificate of merit awards. He took occasion to thank the Indiana architects for the honor they had conferred upon him in asking him to act as critic and judge. He paid high compliment to the exhibit and to the Indiana Society of Architects for the efforts it was putting forth to place the architectural profession before the public.

Visit Architectural Exhibit

At the conclusion of the luncheon the architects in a body went to the John Herron Art Institute to formally open the exhibit to the public and view the work

(Concluded on Page 6, Col. 1)

on display. The exhibit, while not as large as in some former years, owing to no out-of-the-state exhibits, is very attractive, meritorious and includes the work of many of the profession about the state.

As a windup to the two days' gathering a six-thirty p. m., dinner and entertainment featured the program.

Governor Leslie Officiates as Toastmaster

This function attracted a big turnout, architects and representatives of allied building interests being present. Governor Harry G. Leslie honored the architects with his presence and acted as toastmaster.

The governor admitted he had campaigned with the avowed announcement that he was bound by no pre-election promises, but was reminded by Architect Walter Scholer, his fellow townsman, that he had made one pre-election promise and that was made last year when he said he would meet with the architects at their next mid-winter gathering, "and here I am," said the governor.

"I have met with you for the past few years," he said, "and have always enjoyed your company. There is a fine, progressive spirit connected with the architectural profession which everyone must admire. Architects are creators and must keep up with all the new developments and materials in building operations, they must move on, there is no stopping, no turning back, no standing still. That is the spirit that makes for achievement. It is a pleasure to number among one's friends such men as you."

Pats Hoosiers on the Back Then Turns to Value of Beauty in Modern Scheme of Things

Mr. Reed, judge for the architectural exhibit, was next introduced. He began by saying, "I will have to learn my civics all over again. There was a time when I was taught that government consisted of the executive and judicial, but after noting the situation here tonight and hearing your governor, I am led to believe that government has been expanded to include the architectural function also. At that, with the governor on your side and possibly also members of the legislature whom I have met here, I am inclined to believe that the architectural profession will be well taken care of in Indiana.

"As for your state, please allow me to compliment your government for its legislative action in seeking to preserve your natural resources as well as beautiful things of the past which have been left to us. First, I refer to the progressive step that was made to save the Dunes in Northern Indiana by making it a state park, and second, the restoration of the beautiful old Lanier Home at Madison, Ind., which was brought to my attention at the architectural exhibit this afternoon. Such spirit on the part of the state is a fine thing and I am moved to return to Illinois and encourage moves such as have been made in Indiana.

"Chicago has good reason to appreciate Hoosiers. Ever since the little settlement about Fort Dearborn came into being it has been closely associated with Indianians. It is a satisfaction to come down and see them on their native heath. From the start they have had colorful imaginations and have been doers of things. It has been said the massacre of Ft. Dearborn would have been infinitely more complete had it not been for the non-arrival of the Miami Indians from Indiana.

"Early Hoosiers wended their ways to Chicago in decorative, colorful, covered wagons, drawn by animals garbed in fancy harness, and tantalized natives with their cooking of produce hauled from the fertile valley of the Wabash. Is it any wonder Indiana has her literary men, her artists, statesmen, with such a colorful ancestry?

"But, to get back to architecture. It is pleasing today to realize that people are coming to an appreciation of the value of beauty. Just recently President Coolidge, at the dedication of the Bok Tower in Florida, stressed that value. We have lived in a stage of material things, now we must develop the spiritual and the beautiful.

"That is our task. Never were we so uncertain as to where we are going in art. I frequently wonder if we all appreciate our unique responsibilities. However, there is encouragement in the fact that there is in the air a spirit of appreciation of architecture, art, music, and contemporary things.

"Architects must experiment with materials and improved methods. They must not forget the lessons of the past, rather, they must study the old forms and then apply them to new problems ever sincere in the attempt to build in the manner of the day so that in the future they will tell our story to posterity, our life, our customs, our civilization."

Secretary of State Board of Health Makes a Short Talk

Dr. Wm. F. King, secretary of the State Board of Health and president of the Indiana Building Congress, concluded the remarks of the evening by briefly recounting his official association with Indiana architects for the past seventeen years, asserting that while he had had differences and misunderstandings with them nevertheless he didn't know of any other class of men with whom he had dealt who had been more sincere, earnest and fair than the architects, and that his contact with them had been a source of much satisfaction to him.

Interspersed throughout the evening was woven a program of instrumental and vocal music, to which was added a series of art poses by models from the John Herron Art Institute under the direction of Wm. Forsyth, well known artist of Indianapolis.

WELL-KNOWN FORMER INDIANA CONTRACTOR PASSES

Many in Indiana building construction circles will regret to learn of the recent passing of James Boswell, Bloomingdale, Ind., senior partner of the architectural firm of Boswell and Beeson with offices at Crawfordsville.

"Jim," as he was more familiarly known by his host of friends had been engaged in building construction in Indiana for the past twenty-five years first as a general contractor then later being identified with architectural effort. In these two capacities he had built many township and smaller city schools throughout the state and his friends were legion.

ANOTHER STATE BUILDING CODE IN PROSPECT

City Building Officials of Indiana Take It Upon Themselves to Get Into the Code Making Game

Building code framing seems to be the order of the day and it looks as if Indiana has broken out with the rash. Only recently the Administrative Building Council of Indiana after six years of intensive effort promulgated a set of Standard Building Rules and Regulations, much in style to a state code. This document was endorsed by the state associations of architects, contractors, engineers and representatives of organized labor.

Now the city building inspectors of the state have decided another code is necessary so a recent Conference of Building Officials of Indiana was called to which many material supply men were invited. The meeting was held at the Claypool Hotel, Indianapolis, February 8, at which organization was effected, officers elected and a special code committee appointed to draft the proposed document.

Officers named were: Wm. F. Hurd, Indianapolis, president; D. Moomaw, South Bend, vice-president; T. D. Lee, Indianapolis, secretary-treasurer. Those on the code committee are: G. B. Bushnell, Elkhart, chairman; W. M. Davis, Muncie; John Voss, Evansville; J. E. Higgs, Richmond.

GREETINGS TO THE MEMBERS OF THE INDIANA SOCIETY OF ARCHITECTS

New President Urges Support For the Society

It has been said that Anticipation is a greater pleasure than Realization, yet the very fact that one's dream comes true, that a successful accomplishment has come from your efforts, makes the Realization worthy of any labor you may expend. The experience of getting somewhere in real service is what counts for most. But the "getting there" depends on YOU.

With this thought in mind and with your help, I, as your new president, shall attempt to bring to a Realization a Successful Year for the Indiana Society of Architects.

We shall have a real job for every member to do this in a constructive way. To get a sure toe hold on the ladder, leading up to a successful year, we must have confidence in our ability and a willingness to give true service to the people we serve, and go out of our way to add our experience to a common cause in our community; willing to be a leader in any activities for the cause of Architecture; willing to give the world the benefit of our training and experience to put Architecture on a higher plane, and when called upon to render a service for the Society a will to do a real part in carrying on.

Our program for the year has not been completed as yet. But our first meeting will be a regional meeting at Fort Wayne sometime during the week of March 10 to 16. This week has been set aside by the Chamber of Commerce as "Architectural Week" in its program of Civic Activities during the month of March. This meeting will help the Fort Wayne Architectural Club in interest and will be helpful to the Society in catching the inspiration of service to the public, as we will be helping Fort Wayne make a success of their civic dream.

This year we must face the problem of advertising. It's a large job to know how to best do this. Yet something must be done to bring to the public attention that, as a profession, we have service to sell. We must show them we are a necessity in their building problems; that we stand for safe and sanitary buildings, which cannot be had without trained men; that we stand ever ready to solve the most difficult economic problems for them.

Then too, we must educate the public to higher type of Architecture and at the same time train ourselves to produce the high type we talk about which we talk. Be a day-dreamer, then, by Pluck, Perseverance and Courage, put these fine thoughts into Realization. Let us measure up to a high standard in the service we render our clients. Let it be a standard of measurement wisely chosen, so it will stand for the uplift of our profession, having in it the determination for full service in a noble fashion. These dreams may seem unattainable, yet, with every man in the Society doing his best to assist the new officers in carrying on this year's business in a profitable manner, it all is possible.

"Make our dreams come true!"

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Steel Brings Strength and Security

Structural steel is designed with a big reserve of strength and endurance. Steel has more structural strength for its weight than any other building material. Steel endures—it can be salvaged again and again. Steel is produced by reputable concerns that safeguard its quality by inspection and tests in every manufacturing and fabricating process.

This, the greatest building age in the history of man, was made possible by steel. Other materials are sometimes combined with steel to give them additional strength and security. Such a combination, however, unlike the structural steel shape, cannot be depended upon to act always in accordance with the basic laws of engineering

PUBLIC SALE

CONTRACTOR'S EQUIPMENT

Sale of the personal property of H. I. Stretchberry, deceased, will be made by his administrator at the late resident of decedent in Greenwood, Indiana, at public auction on Wednesday, February 20, 1929, beginning at 1 o'clock P. M. Included are machinery and tools used by general building contractors, particularly one new Yaeger 7-S concrete mixer, with equipment and engine; one small concrete mixer with equipment and engine; one Wissler Transit and Level, 1927 model; on 1926 Ford truck; on 1½ H. P. gasoline engine, 1928; one standard size boring machine and bits; carpenter tools; shovels; scoops, hods, barrows, etc.; 40 ft. oak gin pole; 22 ft. pole derrick; building materials, brick, frames, cement and other building materials.

E. M. STRETCHBERRY,
Administrator.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the Union Township School Building Company, of Union Township, Elkhart County, Indiana, that on Wednesday, February 27, 1929, at 10 A. M. at the office of the County Superintendent of Schools in the Court House in the city of Goshen, Indiana, they will receive sealed bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage, and electric wiring of the new Union Township Consolidated School building. According to the plans and specifications prepared therefor by Henkle & Henson, Architecas and Engineers, of Connersville, Indiana, and adopted and approved by the Building Company, likewise the various Boards of the State of Indiana.

Plans are now on file in the office of the County Superintendent of Schools in Goshen, Indiana, likewise the office of the State Board of Accounts.

Copies of plans may be had upon depositing a check for $25.00 with the Architects, which amount will be returned in full providing plans are returned and a bona fide bid entered by 10 A. M., February 27.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 3 per cent of said bid. These checks are to be made payable to Verne Stahly, President of the Union Township School Building Company. And will be held by the Building Company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute assurity bond for the full amount of his bid. The check of those bidders who fail to be awarded a contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute assurity bond then he or they shall forfeit the amount of their certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Union Township School Building Company.

Dated this 5th day of February, 1929.

VERNE STAHLY,
President.

ORVILLE McDONALD,
Vice President.

MERVIN E. ANGLEMEYER,
Secretary-Treasurer.

HENKLE & HANSON,

Vol. X | INDIANAPOLIS, INDIANA, FEBRUARY 23, 1929 | No. 48

PROSPECTIVE LEGISLATION OF VITAL IMPORTANCE TO THE STATE BUILDING CONSTRUCTION INDUSTRY

Registration for Architects and Contractors and State-Wide Building Inspection Sought

Particularly interesting to Indiana builders and those allied with the state building construction industry should be the current session of the State Legislature before which are to be introduced bills which, if passed, will have an important bearing on all future building construction operations.

These bills have to do with the Registration of Architects, Registration of Contractors and the creation of building construction inspection in cities of the first, second, third and fourth classes. The bills are known as House Bill 212, House Bill 273 and House Bill 301, respectively.

They are the result of intensive study and careful preparation, and are sponsored and endorsed by these state organizations: Building Council, Building Congress, Society of Architects, Indiana Chapter, American Institute of Architects, Associated Building Contractors of Indiana, Engineering Society, Builders Supply Association, Association of Electrigists, Society of Sanitary Engineers, State Building Trades Council, State Council of Carpenters, State Association of Plumbers and Steamfitters, State Masonry Conference, Master Painters and Decorators.

As for the first bill a brief of it was given in last week's Recorder, the issue of February 16. The other two have been explained throughout the state at various meetings, but for those who were not present at any of the said meetings we are herewith setting forth briefs of each one.

Brief of House Bill Number 273

As the purpose of the bill is to safeguard life, health and property and to insure the safe and sanitary construction of buildings and the work related therewith, the provisions thereof shall be construed liberally to achieve the purpose desired.

The bill creates a Board of Registration for building contractors which Board shall be appointed by the State Administrative Building Council from the membership of the Advisory Committee of the State Building Council.

The bill exempts from its provisions contractors, or others, engaged in the construction of any one family residence, or outbuilding in connection therewith, or any building to be used for agricultural purposes outside the corporate limits of any city or town.

Members of the Board of Registration will be paid $10 per day while engaged in attending the meetings and transacting the business of the board in addition to necessary traveling and other expenses incurred in the performance of official duties. The Board is required to hold two (2) regular meetings each year and may hold special meetings as necessary. The Administrative Building Council is authorized to employ an Executive Secretary who shall not be either a member of the Board or of the Council. The compensation of the Executive Secretary is to be fixed by the Council subject to approval of the State Budget Committee.

Persons desiring to engage in building construction and work related thereto, as building contractors, must first apply to the Registration Board for a certificate of registration and must submit evidence to the Board that he is qualified under the requirements of the bill. The Board shall issue a certificate of registration upon submission of satisfactory evidence and upon payment of a fee of $25 and upon execution of a surety bond in the sum of $5,000 and upon showing that applicant has complied with the provisions of the Workmen's Compensation Act. The qualifications required are: Applicant must be twenty-one (21) years of age or over; must be a citizen of the United States; must be able to speak and write the English language; must be of good moral character and reputation; must have been actively engaged for a period of three (3) or more years in the construction of buildings and work related thereto; each year of teaching or study in a school of Engineering or Architecture, being equivalent to one (1) year or practice. As the equivalent of the above requirements the bill provides ten (10) years or more in building construction work or four (4) years in a school of Engineering or Architecture, with at least two (2) years additional active building construction work.

The Registration Board is given authority to revoke a certificate of registration for cause as follows: Gross negligence or incompetence; dishonest practice; conviction for violation of the act; false or fraudulent representation in securing a certificate; conviction of violation of state building rules and regulations, or city building ordinances. Certificates cannot be revoked without thirty (30) days written notice of hearing and hearing, and an appeal from the Board to the courts is provided.

The issuance of a certificate entitles the holder to all rights and privileges under building laws, rules and regulations for one (1) year from the first day of November, 1929. It is provided that the Secretary of the Board shall notify all registrants of the date of expiration of his certificate and provides for the renewal of such certificates by filing the necessary surety bond and payment of a fee of $25. Failure to renew such certificate for a period of three (3) successive years prohibits further renewal but it does not prohibit application for a new registration certificate.

The Registration Board, with the approval of the Council, is authorized to appoint a State Building Commissioner and State Plumbing Inspector and such other inspectors as may be necessary to administer the act. The bill sets up quali-

fications for such commissioner or inspectors. The compensation of such Commissioner or inspectors is to be fixed by the Board with the approval of the State Budget Committee. The bill gives the Board authority to inspect, or cause to be inspected, any building or construction work in reference to compliance with State Building Rules and Regulations and City Ordinances as related to safe and sanitary construction; to designate wherein regulations are being violated and to require compliance with established rules and regulations and to file information of such violation with the Prosecuting Attorney.

The moneys received are to be covered into the State Treasury, to be kept in a separate fund known as the Building Contractors' Fund. Expenses incurred in administering the act shall be paid from this fund on State warrants issued on requisitions signed by the Chairman and Secretary of the Board. All salaries and expenses are to be paid out as other State expenses are paid. Any sum in the Contractors' Fund in excess of $3,000 at the end of any fiscal year shall be transferred to the State Common School Fund. The Board is required to keep a record of all proceedings with a register of all applicants of registration and to publish an annual report as required by the State. The bill defines "Safe and Sanitary" as follows: The term 'safe and sanitary' shall be construed to mean that any building or structure shall conform to certain minimum standards, such as structural requirements, fire hazards, exits, electrical wiring and appliances, proper heating and ventilation and sanitary plumbing and installation as prescribed in the State Building Rules and Regulations adopted and promulgated by the Administrative Building Council of Indiana." The term "Building Contractor" as follows: "The term 'Building Contractor' shall be construed to mean and include any principal, intermedite or sub-contractor connected with any recognized and designated branch of the construction of buildings and the work related therewith as relates to safe and sanitary construction of buildings and taking contracts to furnish labor and for material." And also defines other terms as mentioned in the bill. The bill is additional and supplemental to the present Building and Housing Laws of the State and to all City Ordinances except where such Ordinances are in conflict. The bill makes violation a misdemeanor and provides a fine of not less than twenty-five (25) nor more than one hundred (100) dollars with imprisonment not to exceed three (3) months for conviction.

Brief of House Bill Number 301

This bill provides for the appointment of a Building Commissioner with the necessary building inspectors in cities of the first, second, third and fourth classes. It provides first for the appointment of a Board of Examiners in each city consisting of two (2) building contractors, two (2) plumbers and one (1) electrician to be appointed by the Mayor.

It will be the duty of the Board of Examiners to examine all applicants for appointment as Building Commissioner, or as plumbing, electrical, and other inspectors and to appoint such officials subject to the approval of the Mayor. The bill prescribes qualifications for applicants in order to be eligible to appointment, requiring that such applicant shall have had at least five (5) years' practical experience. Graduation from a school of Engineering, or Architecture, is made the equivalent of two (2) years' practical experience.

The Board of Examiners shall make such rules and regulations as may be necessary to determine the fitness of applicants and shall submit to the Mayor a list of applicants found eligible showing the rating or grade assigned to each applicant. All appointments must be made from this eligible list.

The bill will require the appointment of a Building Commissioner in each city and additional inspectors to serve under the Building Commissioner as the Board and the Mayor may deem necessary. The bill also provides for appointment of commissioners or inspectors on a part-time basis in cities of the third and fourth class.

The compensation of Commissioners and Inspectors, as provided in the bill, will be authorized and fixed by ordinance of the Common Council.

The duties of such Building Commissioner shall be to inspect and supervise the construction of all buildings as defined and prescribed in the State Building rules and regulations and in the building ordinances of the City, to issue and keep record of building permits and to keep records of all inspections, condemnations, recommendations and orders and to enforce and administer the provisions of this bill, the State Building Rules and Regulations and all building ordinances of the city.

The bill provides how inspection shall be made, provides for the making of tests as to the quality or strength of building material being used, for the condemnation of unfit and prohibited material, for the filing of plans and specifications for the building construction with the Building Commissioner, for approval and for the enforcement of State Building Rules and Regulations. The bill also provides for the employment of a competent person, by the State Administrative Building Council, to make inspection where local officials appeal to the State Building Council for such inspection and provides that the expense of making such special inspection shall be paid by the county, city, town, township or other political subdivision requesting such inspection and limits such expense to ten (10) dollars per day and necessary travel expense for each inspector so employed.

The bill provides for necessary appropriations to be made by Common Councils of the cities affected to carry out the purposes of the act and provides that the Council shall prescribe fees for issuing permits, such fees to be covered into the general fund of such city.

The bill is made supplemental to all Building and Housing Laws of the State and Rules and Regulations pertaining to the enforcement of such Building and Housing Laws and provides a penalty for violation of the provisions of the act.

The purpose of the proposed act is to safeguard life, health and property and to secure the safe and sanitary construction of buildings and work connected therewith.

MAYOR OF INDIANAPOLIS OFFICIALLY BESTOWS REWARD FOR SUPERIOR CRAFTSMANSHIP

Building Trades Mechanics Draw Merit Recognition

Surely a new era has dawned for the building trades mechanic in Indiana when the mayor of a city like Indianapolis steps forward in public and rewards the tradesman for his master craftsmanship. That it what happened recently in the Capital City of the State while architects, contractors, prominent citizens and fellow workers looked on.

It took place when the Indianapolis Building Congress held a special ceremony at the new L. S. Ayres Building and with fitting ceremonies presented twelve mechanics in the finishing trades with Certificates of Merit and a gold button as tokens of their superior craftsmanship in their respective fields of endeavor.

Congratulations were extended to the select twelve by Mayor L. Ert Slack who said:

"People get an idea that work is a sort of economic compulsion; that is you won't work if you don't have to. This

(Continued on Page 6, Col. 1)

is a very wrong idea for work is not an economic compulsion. I worked as a young man and am still working. The education that you get in your early life is what you remember. The education that you get in a public position or through some work that you actually do is the best in life. My best education was that which I got in a trade—blacksmithing; a trade that I learned and actually finished, and there was nothing about the duties of a blacksmith that I could not do.

"The actual work of men in the building trades is the prime necessity in the whole civilization of the world. It is a high ideal, fulfilled by men and women. The work of you building mechanics stands for just as much as the work of those men who design great buildings and public structures. You men who work with your hands are privileged greatly, and it is fitting that we gather here today to do you honor, and to single out for proper recognition those of you who have shown a complete knowledge of your job. I congratulate you men for your high degree of efficiency and hope that many more of you will receive your due and proper recognition."

This practice of bestowing upon mechanics recognition for excellence of craftsmanship has been instituted in several cities of the East by local building congresses, has been started in Indianapolis by the building congress there and a comprehensive plan to extend the custom in other cities throughout the state is being fostered by the Indiana Building Congress, a state-wide organization.

AGAIN ASSERT OPPOSITION TO THE FIVE-DAY WEEK SCHEME

Building Trades Employers in National Convention Make Known Their Attitude

At the threshold of a new building season, with architects, contractors and material supply men all looking forward with anticipation to renewed and active building construction operations, hoping that conditions will be such as to encourage owners to proceed with their contemplated projects there is one disquieting feature, and that has to do with the attitude of Organized Building Labor.

Many are inclined to the belief that a lack of control of the jurisdictional dispute menace will have a serious influence on the future of building construction and in view of that fact the National Association of Building Trades Employers recently recommended and demanded that the Building Trades Department of the American Federation of Labor take steps to lend its aid to some method whereby jurisdictional disputes may be curbed and settled without tying up the building industry.

Further, this national organization of builders took cognizance of the prospective effort of labor to force the five-days working week on the building industry, and in no uncertain terms condemned labor's stand in the matter, urged general opposition to the effort, and also demanded that the various agencies of the industry be brought together for a study of the problem in an endeavor to reach a reasonable solution, or that a commission be formed to study and report upon the matter.

With reference to the five-day week here is the resolution adopted by the members of the N. A. of B. T., E's.:

"WHEREAS, in line with the declared policy of the Building Trades Department of the American Federation of Labor, local Building Trades Councils and Union throughout the United States are persistent in their attempt to force the five-day or forty-hour week upon the various communities, and

WHEREAS, the request made to the American Federation of Labor that they present such facts as have been developed which in their judgment justifies the five-day or forty-hour week has been completely ignored, and

WHEREAS, the American Federation of LOabor by its arbitrary attitude and its refusal to even discuss so vital a question affecting as it does not only the employer with his tremendous invested capital, but also the building public, as well as labor, is guilty of a lack of consideration and fairness that cannot be overlooked, and

WHEREAS, this attempt to unnecessarily prolong the time consumed in the construction of buildings will, if successful, add tremendously to the cost, cause unnecessary economic wastes and disturb the established order of things and throw completely out of line the economic relationship of those in the construction industry with those who must purchase its product.

THEREFORE BE IT RESOLVED by this conference of those engaged in the construction industry, held in the city of Chicago, this 25th day of January, 1929, that in face of this arbitrary action by the American Federation of Labor unsupported as it is by any economic reasoning and in line as it is with their many restrictive measures and their persistent opposition to labor-saving machinery and devices, all of which penalize the building and consuming public with unnecessary high costs, and

BE IT FURTHER RESOLVED in view of the seasonable character of the construction industry and the time lost because of inclement weather, strikes and other labor disturbances, the communities throughout the United States resist this further invasion of their rights to the utmost, and

BE IT FURTHER RESOLVED that we hereby demand of the Building Trades Department of the American Federation of Labor that they together with all other agencies affected be brought together to study this problem and find its solution, or that a commission be formed to study and report upon the matter."

RICHMOND ARCHITECTURAL FIRM INCREASES PERSONNEL

To Continue Operations at Same Business Location

Announcement has come from Richmond, Indiana, that a reorganization of the architectural firm of Werking and Son has been effected, same to be known hereafter as Werking, Werking and Fallon, the members being, Charles E. Werking, Paul R. Werking and Joseph R. Fallon. The business will be conducted as formerly at suite 303-07 American Bank building, Richmond.

NEW FIRM OF ARCHITECTS AT SOUTH BEND

ARCHITECTURAL EXHIBIT JUDGE STATES REASONS FOR HIS AWARDS DECISIONS

Conclusions Reached Illuminating and Indicate Sincerity and Conscientious Study

Frequently in the awarding of prizes the judge or judges of awards announce the decision and fail to supplement same with any explanation or reason for the conclusions reached, instead, folks are left to wonder and to draw their own deductions. This at times is inclined to dissatisfaction on the part of some who feel that possibly there has been discrimination shown in the selection of the successful participants.

Ordinarily the awards should speak for themselves and no reasons required as to why they were made, but, for self-protection, it is a wise judge who briefly and concisely backs up his position and decision verbally. In this latter class one would be inclined to put Earl H. Reed, Chicago, who acted as critic and judge of awards for the annual Society of Architects' Architectural Exhibit now on display at the John Herron Art Institute, Indianapolis. There is so much to be taken into consideration in the awarding of prizes at such an affair and Mr. Reed very discreetly took no chances, explaining very clearly that his had been a hard job.

He paid high tribute to the efforts of the Indiana architects to put on such exhibits and commended in no uncertain terms the men who had submitted displays and then, in turn, praised the latter as meritorious and of much charm and beauty.

In announcing his decisions he said: "The gold metdal for the most meritorious exhibit is awarded to Architects Lee Burns and Edward James, Indianapolis. Theirs is a series of well-designed residences of a refreshing variety of type, giving an impression of consistent charm, dignity and unfailing good taste.

"Honorable mention is given Architects Edward D. Pierre and George Caleb Wright, Indianapolis, for a varied and interesting exhibit.

In the Public and Semi-Public Building Class, the Warren Township Grade School, Marion County, Indiana, by Architects Merritt Harrison and Llewellyn Turnock, Indianapolis, was selected for the Certificate of Merit. This structure shows a simple, direct and charming solution of the problem. It is good in detail and materials and of unusual merit as to general proportion. Honorable Mention, in the same class, goes to the Chamber of Commerce Building, Fort Wayne, Indiana, by Architect Guy Mahurin of that city. This because of its unusual charm and richness of detail. Honorable Mention also should be made of the M. E. Church, La Porte, Indiana, by Architects George W. Allen & Son, La Porte, for its excellence of type and two texture stone.

"As for the Apartment House Division, the Certificate of Merit is awarded to the Varsity Apartments by Architect Walter Scholer, Lafayette, Indiana. This building is cleanly and attractively designed in brick and stone within a reasonable cost limit. It is open in plan and domestic in quality.

"Honorable Mention in this class is awarded Architects Lawrence George and Daniel J. Zimmerman, Indianapolis, for their exhibit of a series of well studied apartments.

"Commercial Buildings—Certificate of Merit to the Old Trails Building, Architects Edward D. Pierre and George Caleb Wright, Indianapolis, for its direct and rich use of brick and terra cotta in effectice combination, and for its interesting, indigenous, sculptural detail by Leslie Posey. There is a sensible adherence to necessities of light and ventilation.

"Dwellings—The Wm. Ross Teel residence, Architects Lee Burns and Edward James, Indianapolis, takes the Certificate of Merit in this section. It is an exceedingly charming frame and stone house, distinguished by delicacy of proprtion and detail as well as good taste inside and out. The study is very fully presented and is reminiscent of early midwest architecture.

"The Norman Perrry residence gets Honorable Mention. It is a well-studied, gay and playful answer to the American demand for the exotic in architecture, being of excellent craftsmanship and vivacious in detail.

"A Certificate of Merit for the outstanding feature of the exhibit goes to the one submitted by the Department of Conservation Indiana, twelve frames showing fine old classical revival—the mansion of J. F. D. Lanier, Madison, Indiana—completely restored and intelligently furnished with furniture of the period—the late forties. This is notworthy in the effort to preserve the beauties of our forefathers.

Leslie F. Ayres and W. W. Bonds receive Honorable Mention, the former for his distinguished renderings and pencil travel studies, the latter for his artistic and beautiful photography.

Build Anywhere, time—

Steel can be erected in any weather, in any climate, without protection. The erection of structural steel can proceed, regardless of weather conditions, as long as men can work.

Unlike other structural materials, steel's strength is not impaired by freezing, intense heat, or rain. Its qualities are immune to injury resulting from climatic conditions. It does not have to be

Sealed Proposals

HOTEL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that sealed proposals will be received up to the hour of 10 o'clock a. m., Thursday, March 7th, 1929, at the office of Sutton and Routt, architects, for the construction and completion of a new eight-story hotel building, located at the corner of Fourth and Main streets, Vincennes, Indiana.

Proposals will be received for the following branches of work:

1. General construction of building.
2. Heating and ventilating.
3. Plumbing and drainage.
4. Electric wiring.
5. Screens.
6. Interior decorating and painting.
7. Elevators.

Proposals shall be made on forms prepared by the architects and each proposal must be accompanied by a certified check made payable to Mr. W. M. Alsop, president, in amounts as follows:

General construction, five thousand dollars ($5,000.00).

Heating and ventilating, one thousand dollars ($1,000.00).

Plumbing and drainage, one thousand dollars ($1,000.00).

Electric wiring, one thousand dollars ($1,000.00).

Screens, one hundred dollars ($100.00).

Interior decorating, five hundred dollars ($500.00).

Elevators, five hundred dollars ($500.00).

Which checks shall be forfeited in case of failure of any bidder to enter into a contract within ten (10) days after notification of acceptance of proposal.

The successful bidders will be required to enter into a written contract with the directors of the Fort Sackville Realty Company and furnish approved surety company bond in sums equal to the amount of their contract.

The owners reserve the right to accept or reject any proposals.

Copies of plans and specifications may be obtained at the office of Sutton and Routt, architects, Vincennes, Indiana, and at the office of J. M. Rotz Engineering Company, Merchants Bank building, Indianapolis, Indiana, for heating and ventilating, plumbing and drainage and electric wiring, by making a deposit as required by the architects or engineers for the safe return of plans. Said deposit checks to be returned to bidders upon safe return of plans and specifications and filing of bid, on or before the day set for receiving bids.

Bids will be addressed to Mr. W. M. Alsop, President, Fort Sackville Realty Company and shall be marked "Proposal for New Hotel (name of contract) Contract."

FORT SACKVILLE REALTY COMPANY,
W. M. Alsop, President,
C. C. Winkler, Secretary.

Feb. 23.

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned members of the Union Township School Building Company, of Union Township, Elkhart County, Indiana, that on Wednesday, February 27, 1929, at 10 A. M. at the office of the County Superintendent of Schools in the Court House in the city of Goshen, Indiana, they will receive sealed bids for the erection and completion of the general construction, likewise the installation of all heating, ventilating, plumbing, sewerage, and electric wiring of the new Union Township Consolidated School building. According to the plans and specifications prepared therefor by Henkel & Henson, Architects and Engineers, of Connersville, Indiana, and adopted and approved by the Building Company, likewise the various Boards of the State of Indiana.

Plans are now on file in the office of the County Superintendent of Schools in Goshen, Indiana, likewise the office of the State Board of Accounts.

Copies of plans may be had upon depositing a check for $25.00 with the Architects, which amount will be returned in full providing plans are returned and a bona fide bid entered by 10 A. M., February 27.

All bids must be in writing on Form No. 96. The Building Company reserves the right to reject any and all bids, to use sufficient time to investigate the bids and the qualifications of each bidder.

Each bid shall be accompanied by a certified check equal to 3 per cent of said bid. These checks are to be made payable to Verne Stahly, President of the Union Township School Building Company. And will be held by the Building Company as a guarantee of good faith that said bidder or bidders will enter into a contract and execute assurity bond for the full amount of his bid. The check of those bidders who fail to be awarded a contract will be returned to them within 10 days of the opening of bids.

Should the successful bidder or bidders fail to enter into a contract or execute assurity bond then he or they shall forfeit the amount of their certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Union Township School Building Company.

Dated this 5th day of February, 1929.

VERNE STAHLY,
President.

ORVILLE McDONALD,
Vice President.

MERVIN E. ANGLEMEYER,
Secretary-Treasurer.

HENKEL & HANSON,
Architects.

UNUSUAL CITY-WIDE ATTENTION TO BE DIRECTED TOWARD THE ART OF ARCHITECTURE

Chamber of Commerce at Fort Wayne Designates and Sets Aside a Week For That Purpose

A novel, unique and far-reaching in its scope scheme has been evolved by the Chamber of Commerce at Ft. Wayne, attention to which should be given by every architect and contractor in Indiana; first, because it is an innovation, and second, because of the means its affords to bring to the attention of a community in a most advantageous light an important phase of building operations.

The secretary of the Ft. Wayne Chamber of Commerce has worked out a schedule of special weeks for the year of 1929, each one of which is to be devoted to some particular subject, such as architecture, music. art, history, literature, industry, etc.

Through the "Week of Architecture" building will draw unto itself an attention such as has never been devoted to it heretofore in Ft. Wayne in such intensified form. It is a most desirable means of publicity and if the plans are followed through as contemplated should mean much to future building in that city.

The plan to include Architecture among the subjects for special stress came as a surprise to the local architects and caused much gratification among the members of the profession who immediately endorsed the proposition and entered whole-heartedly into it.

As matters stand, the week of March 10 to 16 has been set aside as the "Week of Architecture" and the members of the Ft. Wayne Society of Architects are leaving no stone unturned to make it the most noteworthy occasion in the history of architectural affairs in the northern Indiana city. Various committees have been appointed and are working hard on details for the week's program, a tentative draft of which calls for the following activities:

1—Studio talks (Little Art Theatre).
   (a) Sunday, March 10—"The Significance of Architecture."
   (b) Tuesday, March 12—"Architectural Styles."
   (c) Thursday, March 14 — "Modern Architecture in the United States."

2—Special talks on Architecture in its various ramifications before the local service clubs, such as Rotary, Kiwanis, Lions, Optimists, University, etc.

3—Radio address from station WOWO—"Purposes of Architects' Program."

4—Competition—In order to interest the younger generation in architecture it is proposed to hold a competition among the art students of the public and parochial schools for a magazine cover.

The proposed cover is to be used for a magazine to be gotten out by the Architects' Society for the purpose of encouraging better architecture in Ft. Wayne. The motif of the design must be architectural. It is proposed to award first, second and third prizes for the best designs and honorable mentions for others.

5—Banquet.

A special evening banquet will be held March 15, at the Chamber of Commerce, which will be open to the public and at which an architect of national reputation will deliver an address on architecture.

As an added attraction for the week the Annual Architectural Exhibit of the Indiana Society of Architects, which has been on display at the John Herron Art Institute, Indianapolis, during the month of February, is to be moved to Ft. Wayne where the various exhibits will be hung in the Little Art Theatre, 1026 West Berry street, for public display throughout the week. In addition to the architectural exhibit an effort is to be made to interest Those of the allied arts to enter into the spirit of the affair and display examples of their handicraft. Thus it is hoped to create an artistic and fitting atmosphere for the exhibit gallery and present to Ft. Wayne citizens an exhibition such as never has been attempted in the city heretofore.

Various merchants of Ft. Wayne are cooperating with the architects and propose to fit up especially their display windows to impress the need for good taste in furnishings in following out architectural ideas.

This is the most impartial, intensive and comprehensive architectural educational effort ever put on in an Indiana city, and because launched and sponsored by the Chamber of Commerce of Ft. Wayne, is all the more noteworthy. It is a fine tribute to architecture and the archi tects of that city may well be proud of the approaching event.

BILL FOR REGISTRATION OF CONTRACTORS IN INDIANA FALLS BY THE WAYSIDE

Proposed Legislation Endorsed by State Building Congress Dies in Committee

Contractors and others of the Indiana building construction field, who have better building at heart and would protect the public from the "fly-by-night," "irresponsible" and more or less incompetent contractors by setting up state machinery to curb that class of builders, will regret to learn that House Bill 273, the purpose of which was to establish registration of contractors, was killed in committee a few days ago during the current session of the State Legislature.

This was one of the three bills sponsored by the Indiana Building Congress, a body representing thirteen state building organizations, architects, engineers, contractors, sub-contractors and organized labor. An active, state-wide educational program to acquaint building in-

terests in these bills and secure support for them was conducted by the State Building Congress.

House Bill 273, the one just killed, was finally introduced and according to J. H. Owens, Secretary of the Congress, who was active around the legislative halls at the statehouse did not seem to arouse much opposition until C. D. Root, Crown Point, Indiana, Secretary of the Indiana Retail Lumber Dealers' Association arrived on the scene and openly declared he was out to kill the bill. From them on there was not much doing except that word came from the committee, to whom House Bill 273 was submitted for consideration, that action on the bill was indefinitely postponed.

NEW YEAR GETS AWAY TO A SLOW BUILDING START

Larger Cities Show Fair Activity But the Smaller Ones Have Not Recovered Late 1928 Letdown

Building permits issued in 576 cities and towns for the month of January, according to official reports made to S. W. Straus & Co., building financiers, showed a loss of 11 per cent from January, 1928, and a 5 per cent loss from December, 1928. The total for the first month of this year in the 576 places was $239,074,441, compared with $266,293,500 in January last year and $251,991,579 in December last year.

The January decline of 11 per cent for the whole country appears to be largely in the smaller cities and towns. This is indicated by the reports from the twenty-five leading cities, which showed a gain of 5 per cent over January, 1928; a gain of 9 per cent over January, 1927, and a gain of 9 per cent over December, 1928. Among the twenty-five leading cities, fifteen reported substantial gains over January last year.

The total for the twenty-five leading places in January was $165,443,243, compared with $157,244,920.

Had there not been a January gain in New York of nearly $15,000,000, the twenty-five leading cities, as well as the whole country, would have shown a loss from January a year ago, as the total gain in the leading group was less than $8,000,000. At the same time it will be observed, from an analysis of the figures of the leading cities, that the heavy loss in Chicago, rather than in the other places, pulled down the showing for the group.

On the whole the January building figures do not show a radical downward tendency in construction activity, but neither do they indicate a recovery from the slowing down which set in after the middle of 1928.

ARCHITECTS' REGISTRATION AND BUILDING INSPECTION BILLS IN A FAIR WAY TO BECOME STATE LAWS

Former Passes in the House and Goes to the Senate, Other One Favorably Reported Out of Committee

The legislative session now in progress at the statehouse, Indianapolis, still holds the attention of the builders of Indianapolis despite the untimely demise of House Bill 273, for the Architects' Registration Bill, House Bill 212, and the one providing for state-wide building construction inspection, House Bill 301, are still intact, and, according to last accounts were weathering the legislative currents and cross-currents in good shape.

The Architects' Registration Bill has passed the House and is now ready for presentation to the Senate.

As for the Building Inspection Bill it has been reported out of committee with full committee recommendation that it be passed.

These two pieces of proposed legislation are sponsored by the Indiana Building Congress, a body that has made an active campaign to secure their passage.

DOWNTOWN PARKING GARAGES

Here Is A Problem Worthy of Serious Architectural Consideration

M. STEELE CHURCHMAN

Years ago when towns and cities were laid out by our forefathers, no one dreamed of the existence of the motor car and its attendant heavy traffic as it prevails today, and so the principal business streets developed to the point where it was almost financially impossible to widen streets or make any adequate preparations for public parking areas. As a result of this condition downtown parking garages have become a necessity. And the prospect is one of more and more strict parking and traffic ordinances—possibly all parking prohibited from certain congested areas in time.

What must be done in all the larger cities, is to think, not in terms of dollars and cents profit on one particular garage, but in terms of the development of the city. Perhaps the first thing the stranger looks for when he enters a city is a garage to leave his car in; and his first impression must be favorable. There is a community aspect to the garage question; a civic aspect, which we all must realize. Theatres, department stores, hotels, and office buildings need attractive, architecturally correct, courteously managed, convenient garage, and the right garage in the right place is a city asset. The garage has long since ceased to be a converted livery stable, full of torn down cars, boxes of greasy parts, and dirty mechanics working, spitting and swearing. The parking garage, which often offers many services done better than the old converted livery stable, is a trim, neat, attractive, fireproof building.

There are four major considerations which must be gone into quite thoroughly. First, and perhaps most important, is the location. The ideal location is to stay just as close to the best retail section of downtown as possible, provided ground costs are not too excessive, and be between that best retail section and the biggest and best residential section. Second is the size; and this must be determined by the drawing power of the garage—ordinarily within a two to three-square radius. It is better to have a garage which is a little too small than one which is too large. Third is the design. There are three general types of design; full floor ramp, elevator, and the system of staggered floors with short intercommunicating ramps joining them, each ramp carrying a half floor. Full floor ramps have two serious drawbacks; they are not economical of space, and they present a mental hazard in the long dark incline. Elevators are economical of space, but they are expensive to install, require an operator to run them, and can not handle traffic rapidly enough in the morning and evening rush periods. And the cost of elevators, by the way, varies directly with the speed and size. The third type of design presents the logical solution for inter-floor travel in the downtown parking garage. The ramps are of easy grade, and the visibility is excellent.

This latter system has often been spoken of as having all the space saving properties of the elevator garage, but also having all the advantages of the long ramp garage without the disadvantages of either system. The fact that practically all the new garages being built today embody this type of construction is fairly conclusive proof that this system will move and store more cars quickly and cheaper than any other system.

The fourth important consideration is management. For the garage can not only endanger its financial status by poor management, but the city as a whole can suffer. The modern garage operator must be a trained merchandiser—a specialist. There is a growing tendency toward nation-wide operation on a large scale of a chain of garages by one management. Under this scheme it is possible to have a national color scheme, national advertising, specialists who can travel around

(Continued on Page 6, Col. 1)

the country, devoting their time to one particular phase of garage management and operation, and combined executive and management control. Perhaps one local method of management might be mentioned, and a suggestion advanced. In a great many other towns and cities the patrons of the parking garage are educated to drive their own cars to and from the stalls. Probably a great many would prefer to drive their own cars up and down the ramps, particularly those who have monthly contracts for car storage. Perhaps a slight reduction in rate to the one who drove his or her own car in and out would enable the operator to cut down the number of boys who run the cars up and down, and thus effect a saving to himself. It is reasonably certain that service would be better during rush periods. One point; namely, that courteous, neatly dressed attendants, handling cars in a well located, fine appearing parking garage, are performing a service that the down town community wants and needs, and it is a service that gives the visitor to our city a favorable impression. The subject of downtown parking garages is fascinating, and its development is one that affects the city as a whole, and serious thought should be given to garages, not so much from an investment standpoint, although they pay very good returns financially, but from a community standpoint, because they pay good civic returns.

(Address made before the Indianapolis Architectural Club.)

HELPERS OR TRUE APPRENTICESHIP?

Youths Should Be Taught; Not Merely Put to Work

There are those in trades who don't like the restrictions placed around the employment of apprentices. We have met employers who refuse to have anything to do with apprenticeship simply because they are not allowed to employ learners on the terms they, themselves, see fit to lay down. They can not understand why they should not be free to hire as many apprentices as they please; keep them on any kind of work as long as they see fit; hire them without assuming any obligation of responsibility; and in general be free from any kind of regulations governing the apprenticeship.

When a large proportion of employers in a given trade feels that way about it, formal apprenticeship automatically ceases to exist in trade.

In another article on apprenticeship recently published mention was made of a person who had his house painted on the outside and that the paint was still sticky two weeks after it had been applied. He needed and wanted considerable interior decorating done but not knowing anything about paints and painters he was afraid to proceed with the work for fear there would be a repetition of the botch job done on the outside of the house.

Instances of that kind could be multiplied over and over again, not in a few trades, but in a majority of them. Apprenticeship training is needed as a solution to the problem.

The sheet metal workers' trade is one of the most intricate we have. A boy may get a college degree in four years' time, but apprentice the same boy to the sheet metal workers' trade and he could hardly qualify as a first class machanic during the same length of time. One cannot learn the painting and decorating trade, with even a part of its many ramifications, in four years. As for carpentry, the ability to file a saw expertly is in itself a nart.

Building trades are not gaining anything by side-stepping true apprenticeship. On the contrary they are losing a volume of business as well as the prestige they once enjoyed. (Exchange.)

ARCHITECTS, OR LAWYERS?

A Plaint From South Bend

W. D. TEEPLE, Architect

Indiana has six general building laws—the Standard Rules and Regulations of the Administrative Building Council of Indiana; Housing Law; Factory Inspection Bureau Rules and Regulations; Fire Marshal Law; Theatre Law; School Law. In addition to these there is a boiler inspection law, smoke law, nuisance law, movie law. All are of state-wide application, these latter apply only in particular cases, of minor interest to average owner.

At South Bend there is a Building Code, Plumbing Code, and Zoning Ordinance that must be observed. There are the laws. Several contain clauses to the effect that their own requirements are minimum, leaving all others in full effect. None supersedes or repeals any part of any other. Cumulative requirements are staggering.

There are also quasi-laws enforced by utilities under official sanction; rules of city water works, light and power companies and gas companies.

Then come what are not laws at all but which must be complied with under court decisions; National Underwriters' Regulations, Realty-Plat Dedication Restrictions.

It is as absurd to say these are all wrong as to contend they are all right. Each has good features, but each has some peculiar standard usually above really necessary requirements; taken together their requirements are onerous. Laws are brittle affairs, won't yield or bend to accommodate unusual cases.

The engineer's primary aim is sound construction. Architects strive for artistic effect. Engineers are fairly unanimous but scarcely any two architects agree on art. Art as such isn't legally restricted except when it descends to obscenity.

Owners as a class want profit, are hopelessly ignorant of construction. They can't be standardized but may be generalized. Running all up and down the civil gamut, voices variant in timbre, their common theme of profit may always be detected by the trained ear notwithstanding variations and "katzenmuzik."

Contractors want profit; but ways and-means are formulated, there's no camouflage. Any contractor will build what he's paid for.

First above is a category of laws and near-laws. How many are sponsored or urged by owners as a class? Which ones? How many by contractors? By architects or engineers? By others?

Obviously we find laws aiming at sound construction traceable to those having that aim. Other aims have other sponsors; principally sponsors having something to sell. Elimination of the latter excrescences will go far to ease the situation.

The contractor is neutral, will build what is to be built, concerned only with profit. But the owner has valid complaint when forced to build heavier than is necessary, in undesirable localities, restricted to mere fractions of sites for the whole of which he must pay taxes. All to profit of material man and realtor, exploitation of ultimate consumer.

Further complaint lies in unequal enforcement. Large cities maintain efficient inspection; as communities decrease in size inspection becomes less comptent and thorough, finally disappears. Distance from organized fire protection increases in direct ratio.

State examination and registration provides competent architects and engineers; but there it stops, not requiring building matters to be referred to registrants. Many such matters are handled directly by uninformed owners or referred to passive contractors of dubious competency. Actively competent contractors fare poorly in such competitions.

Plan-bureaus send in plans—every architect knows what kind. These may be advertised and sold and owner has no redress. It seems to be an accepted idea that there is no legal preventive for that situation.

Why not? Try selling shares in Aurora Borealis. Import a barrel of whisky. Advertise that you've a crate of automatics for sale. You'll soon discover whether Indiana has anything to say about what is advertised or sold within her limits.

Three times the writer has been examined to see whether he was competent to design buildings. It was decided he was. Then everybody got busy enacting laws telling him just how to do it. Had they stopped with a few sensible laws it would have been an assistance, giving authority to insist on the owner's doing what should be done, assurance the owner couldn't run off and get others to do something else.

Instead, anybody with something to sell got a law passed. Anybody wanting to balk his neighbor's enterprise had a law passed. Any mechanic wanting to monopolize his trade had a law passed. Any and everybody with an ax to grind or press ambitions had laws passed. Likewise I now want a law passed—that nobody shall pass any more laws!

I've a five-foot shelf of laws which nobody seems to pay any attention to. When somebody comes to me to do something I really don't know whether it's lawful, but I'm pretty sure it isn't. I paw that library o'er and o'er, each pawing leaving me more uncertain than before.

But then, who says I'm a lawyer? Certainly neither my diploma nor my registration certificate say it. I'm just a poor architect; all I know is what constitutes a decent building.

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

***Office Building:** $1,000,000.00, 14-stys. and bas., located at the southeast corner of Monument Circle and East Market street, Indianapolis. Archt., Rubush and Hunter, 430 American Central Life Bldg., Indianapolis. Owner, Tower Realty Company, Leo M. Rappaport, 612 Illinois Bldg., Indianapolis. Plans in progress; will give complete details soon.

***Department Store Building:** $350,000.00 3-stys. and bas., located at the southeast corner of Alabama and Vermont streets and Massachusetts avenue, Indianapolis. Archt., Nimmons, Carr and Wright, 333 North Michigan boulevard, Chicago, Ill. Supervising architects, Pierre and Wright, 1133 Hume-Mansur Bldg., Indianapolis. Owner, Sears-Roebuck and Company, Chicago, Ill. General contractor, Westlake Construction Company, Railway Exchange Bldg., St. Louis, Mo. Brick, concrete and steel construction, stone trim. Pouring footings; will probably take bids on the plumbing, heating and electrical wiring soon.

***Grade School Building:** $147,500.00, 2-stys. and bas., Public School No. 81, located at 17th street and Park avenue, Indianapolis. Archt., private plans. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, A. F. Walsman, business director, 150 North Meridian street. Plans completed, on file at State Board of Accounts, will probably start advertisement for bids next week. Brick, reinforced concrete, structural steel, stone trim, steam heating system, composition built-up roof, toilet system, electrical wiring.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 82, located at English and Emerson avenues, Indianapolis. Archt., private plans. Mech. Engrs., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, A. F. Walsman, business director, 150 North Meridian street. Plans completed, on file at State Board of Accounts, will probably start advertisement for bids next week. Brick, reinforced concrete, structural steel, stone trim, steam heating system, composition built-up roof, toilet system, electrical wiring.

***Public School Building** (addition): $50,000.00, 2-stys. and bas. (School No. 15), located at 501 North Beville avenue, Indianapolis. Archt., W. H. Albersmeier, 508 Rauh Bldg., Indianapolis. Mech. Engr. Bevington-Williams, Inc., 1139 K. of P. Bldg., Indianapolis. Owner, Board of School Commissioners, Albert F. Walsman, business director, 150 North Meridian street. Plans nearing completion, will probably start advertisement for bids next week. Brick, concrete and steel construction. Will include an auditorium, two classrooms, manual training room, two new boilers and pump.

***Public School Building** (addition): $45,000.00, 2-stys. and bas., School No. 49, located at 1902 West Morris street, Indianapolis. Archt., Bishop, Knowlton and Carson, 312 North Meridian street, Indianapolis. Mech. Engr., W. A. Breining, 511 Traction Terminal Bldg., Indianapolis. Owner, Board of School Commissioners, Albert F. Walsman, business director, 150 North Meridian street. Plans about completed, will probably start advertisement for bids next week. Brick, reinforced concrete and steel construction. Will include a new auditorium and two new classrooms, altering old auditorium into two classrooms.

***Church Building** (addition and alterations): $100,000.00, 2-stys. and bas. (addition 2-stys., 90x125), located at Owensboro, Kentucky. Archt., Albert A. Honeywell, 413 Penway Bldg., Indianapolis. Owner, First Christian Church Congregation, Rev. Howard S. Stephenson, pastor. 616 St. Anne street, Owensboro, Ky. Plans nearing completion, ready next week. The following will figure the general contract: Key-Langston Construction Company, Murray, Ky.; H. G. Whittenberg, 621 West Jefferson street, Louisville, Ky.

***High School Building** (addition): $45,000.00, 2-stys. and bas., Charlestown, Indiana, Charlestown township, Clark county. Archt., W. H. Garns and Son, 1217 Fletcher Trust Bldg., Indianapolis. Owner, Lawrence Ross, trustee, Charlestown. Receiving bids to 2 o'clock p. m., Thursday, March 28th. Brick, stone trim, additional radiation, composition built-up roof, steel sash, plumbing, electrical wiring. Will contain classrooms and gymnasium.

***Church** (addition of auditorium): $35,000.00, 1-sty., 42x70, located at Temple and 11th streets, Indianapolis. Archt., Wilson B. Parker, 507 Board of Trade Bldg., Indianapolis. Owner, Saint Peter's Lutheran Church, Henry C. Geiger, chairman of building committee, 1728 East 12th street. Receiving bids to 12 o'clock, noon, Monday, March 4th. The following are figuring the general contract: Leslie Colvin, 823 Continental Bank Bldg.; Krebay Construction Company, 802 New City Trust Bldg.; Service Construction Company, 301 Castle Hall Bldg.; Brandt Brothers and Company, 512 Indiana Trust Bldg.; Harry F. Vahle, New Palestine; Carl F. Schultheis, Hillview and Hilltop avenues, Dayton, Ohio. The following are figuring the plumbing and heating. R. M. Cotton Company, 1720

Structural

Worthy of your supreme confidence is the architect who counsels his clients to use structural steel. He is guarding the best interests of the builder, as well as the safety of all who will use that structure in years to come. For steel is the material whose tremendous strength and absolute safety are definitely and accurately known, because of constant testing and incontrovertible chemical analysis.

el is SAFE

Steel is the safest building material. It is also the easiest to work with, because steel construction can proceed as long as men are able to work. That, too, makes for economy in construction cost. Whatever the type of structure you have under consideration, remember always that you can build it better with steel. Steel never fails.

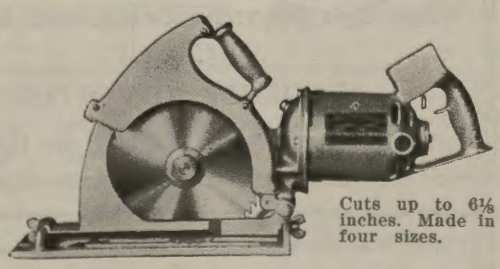
LIGHTNING SPEED WITH ABSOLUTE SAFETY
CROWE SAFETY SAW

The fastest and safest saw on the market. Built of aluminum alloy, making it easy to carry. Standard saw blades. Wherever lumber is cut on the job, a Crowe Safety Saw will do the work in one-tenth the time.



Carpenters, contractors, concrete form workers, and shipping departments are enthusiastic about this saw—cutting time and cost. Easy to operate, and stands the gaff better than any saw of its kind known to the builder today.

If you are interested in saving costs in cutting lumber on the job, write today for interesting details.

"CROWE SAFETY SAW" CUTS THE COST

Cuts sawing costs 75 to 90 per cent. Ball-bearing throughout. Gearing does not heat up. General Electric Motor used. Cutting line always in sight. Crowe Safety Saws are patented.

The Crowe Safety Saw is officially approved for safety by industrial commissions, listed as standard by Underwriters' Laboratories, and recommended by insurance companies.

Cuts up to 6⅛ inches. Made in four sizes.

Vol. X | INDIANAPOLIS, INDIANA, MARCH 9, 1929 | No. 50

ORGANIZATION OF LOCAL BUILDING CONGRESS AT INDIANAPOLIS THE BIG FEATURE OF THE PAST YEAR IN CAPITAL CITY CONSTRUCTION CIRCLES

Body To Seek To Smooth Out Local Problems As They Arise and In Other Ways Advance the Industry

Outstanding among things concerning the building industry at Indianapolis during 1928 and a move of much significance, promising to have an important bearing on the future of the local industry, was the formation and establishment of the Indianapolis Building Congress, an organization strictly in accordance with that which the name implies. It is an organized body of builders the purpose of which is to aid in effecting a closer co-operation between all elements interested in building in Indianapolis, thus to bring together the architect, contractor, engineer, home builder, investment banker, labor, material supply man and others of allied interests that they all may meet on common ground and discuss problems that directly affect them and the indsutry as a whole.

Following considerable preliminary work organization was permanently effected about mid-summer and headquarters were opened at 616 Chamber of Commerce building, Miss Kate B. McCann, being retained as executive secretary. The latter is well fitted for the position, she having been active in the successful formation and establishment of the New York Building Congress. Architect Robert Frost Daggett is president of the new building body.

Apprenticeship Problem

One of the first tasks was to determine the situation with regard to apprentices in the building trades. The chairman of the committee on apprenticeship, Architect Fermor S. Cannon, found that there was much to be done in this field with the result that a definite program has been laid out by his committee. Joint committees on apprenticeship have been set up in several trades, these joint committees consisting of three representatives from the employers and three representatives from labor. These joint committees determine on the course of training for the apprentice boy and through the co-operation of the board of education classes are set up and maintained. The apprentice must have a certain amount of training, both on the job and in the school and after a four-year course of apprenticeship he is made a journeyman mechanic. All questions of wages, attendance at school, promotion and course of study are passed on by the joint committee for each trade, who also provide continuous employment for the boy during his four years of apprenticeship. In promoting the apparenticeship work, the Congress has had the hearty co-operation of labor.

Recognition of Good Craftsmanship

Another activity of the Congress is the awarding of certificates and gold buttons to mechanics whose craftsmanship has been outstanding in the erection of our buildings. This comes under the recognition of craftsmanship committee, the chairman of which is A. V. Stackhouse. The first award was made on the new L. S. Ayres building to twelve mechanics on December 19. The men who receive these awards are selected for recognition by a committee of award consisting of a chairman, who is a member of the general committee on recognition of craftsmanship; a representative of the owner, architect, builder and a representative of labor. These awards acts as an incentive to better workmanship on the part of the merchanics. Labor's part in the erection of our buildings has gone along the years unrewarded and it is fitting that some tribute be made to their skill and conscientiousness on the job. These awards have been well received by the men, some of whom have been at their trade the major portion of their lives without any recognition of their craftsmanship.

Arbitration Court

The arbitration committee, under the chairmanship of Arthur Bohn, has set up rules and regulations for an arbitration court and has nominated a penal of some thirty-five arbitrators, representative of the building industry in Indianapolis. The rules and regulations of this court are in conformity with the Indiana state arbitration law. Any commercial disputes arising in the indsutry may be referred to this court for adjudication and the decision of this court when filed has the same authority as a Supreme court decision.

Accident Prevention

In order to prevent needless accidents on jobs, the safety committee, of which William F. Hurd is chairman, is endeavoring to bring home to the workers and the general contractors the need for accident prevention methods through a safety campaign. Posters are placed on jobs under construction and the workers and contractors are urged to adopt safety methods, and to avoid the most common faults which tend to loss of limb or life.

To Encourage All-Year Building

The committee on seasonal operations, of which Robert Poehner is chairman, in a recent report pointed out the periods of time when labor was unemployed and showed how modern scientific methods have done away with the old theory that it is unsafe to build during the winter months. This committee's activity is chiefly that of promoting the twelve-month building year by bringing to the attention of the owners, architects and the general public the feasibility and economic saving in winter building.

The standards committee, J. E. Hall, chairman, is compiling standard specifications for the industry which will be of great benefit to the entire building industry. Taking the specifications of the New York Building Congress, manufacturers and manufacturers' associations as a working basis they are incorporating in them trade practices in existence here in Indianapolis and making them conform-

able to this locality.

Other committees of the Congress are the committee on codes and practice, Leslie Colvin, chairman, which is setting up a trade practice for the industry. A committee on plan and scope, Lee Huey, chairman, which determines what new activities the Congress should embrace; the publicity committee, Ed Pierre, chairman, which committee disseminates to the press and trade papers the activities of the Congress; the program committee, which arranges for the monthly meetings, secures speakers and has charge of the yearly outing and gold tournament. The chairman of this committee is Charles Brossman.

An innovation was launched by the Congress soon after it got under way when it sponsored a big golf tourney and picnic at Noblesville, Indiana, an affair that attracted a capacity crowd and was an unqualified success. Each succeeding month since that outing regular meetings have been held, consisting of evening dinner, short routine business sessions and talks by featured speakers.

ARCHITECTS' BANQUET POSTPONED

Event Set for March Fifteenth Moved on to Evening of March Twenty-Second

Unavoidable circumstances arising forced Fort Wayne architects to change the date of the Architectural Week banquet from March 15 to March 22.

A general invitation is extended to all members of the Indiana Society of Architects to attend this affair at which Henry Hornbostle, New York City and Pittsburg, distinguished architect of national reputation and a man of wide experience and training in all the fine arts, will be the featured speaker.

SOME REASONS WHY

The difference between the employers' associations in the construction industry and organized labor is that the employer knowingly or willingly refuses to give full support and co-operation to any movement his fellows recognize as essential to the welfare and prosperity of those engaged in the construction line. On the other hand, labor through its advocates has made great progress in organization work and their members have been willing to sacrifice time and money towards the advancement of their cause with the result that they have grown both in numbers and influence in all large cities.

What a big difference there is between a big body of contractors and a union of their employers, one lets his selfish interest influence him while the other apparently is willing to recognize the common good of all and "go down with the ship" if necessary. The employer not only lets his selfish interests influence him but too often tries to find a way to get around a vexing problem injurious to the interests of himself and fellows by deliberately and willfully "trading with the enemy."

Organized labor is a powerful factor in many parts of the country and its national influence is potent enough to keep both of the major political parties trying to pacify them with meaningless planks in their platforms, recognizing them only because they are well organized and able to command the respect and attention of the general public.

The employers in the meantime continue to be individuals in the sense that they are not thoroughly and properly organized in the nation or in any state within its borders. They are not appealed to as a class by either of the two great political bodies and yet their interests as builders of the nation, the men who conceive and execute are paramount to the interest and prosperity of community, state and the nation as a whole.

The building industry is pretty well organized but they are running on a "single track" all going the one way and not working in harmony or pulling together for the mutual harmony or pulling together for the mutual prosperity of their own united interest and those of the country. Too many weak sisters, and too many unwilling to give any time to the work of organization and many who accept and profit by conditions made for them by organized contractors.

Strong local associations of every trade are needed in every city, well organized state associations in every state, all massed in one great big national organization which at once would command the attention of the entire country and make for better conditions for all whether they are in or out of the construction business.—(Bulletin Natl. Assn. Bldg. Trades Employers.)

HOUSE BILL 212 PASSES BOTH HOUSE AND SENATE

Proposed Law for Registration of Architects Now Before Governor for Signature

An architects' registration law for Indiana now gives every promis of becoming a reality, all that is required to make it so being the signature of Governor Harry G. Leslie.

House Bill 212, requiring the registration of architects for the practice of architecture in Indiana which has been pending before the current session of the State Legislature passed the House recently, and on Thursday, March 7, was passed by the Senate on a vote of 28 to 13.

There was more or less opposition to the bill and several amendments were finally made in the original draft, chief of which was, exempting buildings up to a cost of $25,000 for which plans may be prepared by one not a registered architect, plans for all other structures beyond that limit must be prepared by a registered architect. The measure incorporates several reciprocity clauses. Also the bill provides for an annual registration fee of $25.00, and creates a board of five members from the Advisory Committee of the Administration Building Council of Indiana to conduct examinations and grant licenses.

So far so good, and if the Governor signs the bill it will mark the reaching of a goal for which Indiana Architects have striven for years to place the practice of architecture on a high official standard of recognition, put upon the architect greater structural responsibilities and offer greater protection to the building public.

While the architects were the orginial sponsors of the idea to license architects in Indiana, nevertheless, credit for the success so far achieved must be delegated to the Indiana Building Congress, representing the united force of the Building Industry of the State, which got behind this bill this year and fought the battle which promises victory.

APPEAL OF INDIANA SOCIETY OF ARCHITECTS DEMONSTRATED BY THOSE WHO REGULARLY ATTEND ITS MEETINGS

Stands Four Square for the Profession and the Building Industry

There is, among other things regarding the Indiana Society of Architects, one outstanding feature and that is the way the men who have worked in its cause keep coming back each year to participate in the annual meetings and lend their support to its aims.

The organization has been in existence for quite some years now and has kept tenaciously at it to forward the cause of the architectural profession in Indiana and to co-operate with other allied interests in promoting various measures for the good of the building industry. No action taken during those years has been primarily of a selfish nature or in the interest of the membership alone, rather, anything ever advocated has been in furtherance of the profession and all Indiana architects whether they were members of the Indiana Society or not. Then, too, back of each move was the aim to safeguard the interest of the public, to assure fairness and justice to the contractor and to promote the welfare of the entire building industry.

These things are readily apparent in the records of the Indiana Society of Architects and are undeniable. Progress along certain lines has been made, and aims proposed years back have been achieved ,and there is every prospect that others not yet materialized will reach maturity before long. Much of this could have been realized sooner had the Society been given whole-hearted support by the profession of the state, but the fact that accomplishment was achieved in the face of handicapped support speaks volumes for the organization and the men who did back it up.

One of the most gratifying features of the recent mid-winter meeting at Indianapolis was the fine attendance of past-presidents, only two being absent, they being E. Hill Turnock (1920-1921), deceased, and Harry Griffin (1923-24), now in Florida. Those present were:

Herbert Foltz (1918-1919);

A. F. Wicks (1919-1920);

Warren Miller (1921-1922);

Fermor Cannon (1922-1923);

Guy Mahurin (1923-1924);

Walter Scholer (1925-1926);

Robert Frost Daggett (1926-1927);

Merritt Harrison (1927-1928);

Karl D. Norris (1928-1929).

Also among those present were various past vice-presidents, ex-directors and many who in years past have served on important standing committees.

DISTANT I. S. A. APOSTLE JUMPS THROUGH TO DO HIS BIT TO AID PRESIDENT ALLEN

"Billican" Carries On For the Missing Palladio

Village of the Sky, New Mexico, U. S. A.

Dear Caleb:

When our new President George informed me that he was asking some thirty members of I. S. A. to write articles for the Construction Recorder during the year and that I was to write a story of the Early Apartment House of Frijoles. Well, I admit I rather hesitated in taking on such a large job, telling the Indiana Architects the story of the "Ruins of America."

Well, it's mighty interesting to see first handed these apartment houses, built thousands of years ago by these little people.

The Great Communial House at Rito de los Frijoles as you see it from the plateau some six hundred feet above, looks like a piece of honey comb, set in a position like a great amphitheater with some six hundred rooms in it. The partition walls between the rooms radiate to a common center. The center of this great house is open, forming a great court or plaza. At one end this court has a small opening or passage to the outside which is closed at times for defense, making a small city within its walls.

Back of the dirty gray walls of this canyon extending up some 600 feet are pitted with thousands of openings, large and small, and many of them are doors cut into the sides of the friable volcanic rock where once lived these little people who were only 4′ 0″ to 4′ 6″ high.

These men cut out of solid rock these little rooms of 6′ 0″ 8′ 0″ and 5′ 6″ high, with small fireplaces cut in the side walls with a smoke hole over the door for the smoke to pass out.

Well, Caleb, this is one of the things to see out here. Wish I might tell you more about it, but it's time to eat and I never write when food is in sight or aught to be, but I will write more about it in my next letter. Tell President George he has bitten off a life-size job, but I am for him to the last ditch.

BILLICAN.

STEEL INSURES STRENGTH AND SECURITY

Rumley Company Building, Laporte, Ind. Steel fabricated and erected by Central States Bridge and Structural Company, Indianapolis, Ind.

Steel is Incombustib

Structural steel maintains its strength to a remarkable degree in the presence of heat. Investigations have shown that it actually increases in compression strength with a rise of temperature, reaching a maximum at about 500 degrees Fahrenheit. At 700 degrees, it is practically as strong as under normal conditions. Various fireproofing materials are available in which a structural steel member may be encased to prevent an increase in temperature above 700 degrees, even when exposed for several hours to the hottest of fires.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Penn Molding Company Building, Canal Dover, Ohio. Steel fabricated and erected by Central States Bridge and Structural Company, Indianapolis, Ind.

ibReduces Fire Hazards

The Bureau of Standards in Washington and the Underwriters' Laboratories in Chicago, in conducting extensive tests on the action of structural steel members at temperatures up to 2300 degrees Fahrenheit, have found that a steel column with a casing of fireproofing will sustain its load under conditions reached in the most severe conflagrations. In a steel frame every member is an integral part of the whole, thereby contributing to the support and strength of every adjacent member. Steel cuts the fire hazard.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

Notice is hereby given that the undersigned trustee of Charlestown school township, Charlestown township, Clark county, Indiana, and the advisory board of said school township will receive sealed bids at the office of said trustee, Charlestown, Clark count, Indiana, until 2 o'clock p. m. of the 2d day of April, 1929, for the construction of an annex to the high and grade school building on lot Nos. 81, 82, 83 and 84, in the town of Charlestown, Charlestown township, Clark county, Indiana, all in accordance with the plans and specifications heretofore adopted by said trustee and said advisory board of said school township and which are now on file in the office of the trustee of said township and in the office of W. H. Garns & Son, architects and engineers, 1216-17 Fletcher Trust building, Indianapolis, Indiana.

The estimated cost of the work is $40,000.00. Each bidder shall make separate bid or bids on the building and each part of the building in accordance with the following specifications:

1. Bid for the construction and completion of the building, including the wiring and fixtures as shown on the plans and specifications.

2. Bid for the completion of the plumbing and sewer work as shown on the plans and specifications.

3. Bid for the completion of the heating and ventilating system as shown on the plans and specifications.

4. Combined bid on the heating and plumbing systems.

All the bids must be in writing on form No. 96 as prescribed by the state board of accounts. Each bid must be accompanied by a certified check for 3 per cent of the amount of the bid. Certified checks must be made payable to the said trustee of said Charlestown school township, Clark county, Indiana. And check of successful bidder will be forfeited as liquidated damages in the case the bidders fail to enter into contract, and to furnish bond for the faithful performance of the same within ten days after such contracts are awarded.

Each proposal shall be in a separate sealed envelope with writing thereon plainly indicating the character of the work to which the bid relates.

Copies of plans and specifications may be procured by contractors desiring to bid from said architect upon the deposit of $25.00 for the general plans, $15.00 for the heating plans and $10.00 for the plumbing plans. Deposit to be returned to the bidder when plans are returned to the architect in good condition.

Bidders who fail to file a bid with the trustee will be fined $5.00 for the use of the plans and specifications.

The time of the completion of all branches and the whole of said work to be agreed upon at the time of executing the contract.

Said trustee and advisory board reserve the right to reject any and all bids.

Dated March 7, 1929.

NOTICE OF BOND SALE

Notice is hereby given that the trustee of Charlestown school township, Charlestown township, Clark county, Indiana, will on the 2d day of April, 1929, at 10 o'clock a. m., on said date, at the office of the said trustee in the library building, in the town of Charlestown, Indiana, receive sealed bids or proposals for the purchase of certain bonds of said Charlestown school township, Clark county, Indiana, of an aggregate par value of $40.-000.00, bearing interest from and after the 2d day of April, 1929, at the rate of 4¾ per cent per annum, said interest being payable on the 1st day of July, 1930, and semi-annually thereafter on the first day of January and the first day of July of each year thereafter until all of said bonds are paid.

Said bonds have been issued in strict compliance with the laws of the state of Indiana, in pursuance of an order of the advisory board of Charlestown school township, Clark county, Indiana, authorizing the issuance and sale of said bonds for the purpose of providing funds for the construction of an annex to the present high and grade school building in the town of Charlestown, Charlestown township, Clark county, Indiana.

Said bonds will be 53 in number, 27 thereof in denominations of $1,000.00 each and 26 thereof in denominations of $500.00 each to provide funds for the construction of said annex. Said bonds shall draw interest at the rate of 4¾ per cent per annum from the date thereof, payable semi-annually on the first day of July and January each year, the first interest being payable on the first day of July, 1930. Said bonds shall be dated April 2d, 1929, and the first of said bonds shall be due and payable as follows: The first two bonds, one of $1,000.00 and one of $500.00 shall be due and payable on July 1, 1930, and two bonds, one of $1,000.00 and one of $500.00 shall be due and payable on the first day of January, 1931, and two of said bonds shall be due on July 1, and two of said bonds shall be due on January 1, of each year thereafter until all have been paid, the last bond being due on July 1, 1943.

And said bonds shall be signed for and on behalf of said Charlestown township by said trustee and the members of the said advisory board, and likewise the coupons evidencing the interest on said bonds shall be signed by the facsimile signature of said trustee which shall have the same force and effect as if the same had been signed manually.

Said bonds will not be sold for less thtan the par value and accrued interest and will be sold to the highest and best bidder for cash.

The trustee and the advisory board reserve the right to reject any and all bids.

Dated at Charlestown, Indiana, this 7th day of March, 1929.

LAWRENCE A. ROSS,
Trustee Charlestown school township,
Clark county, Indiana.
Address: Charlestown, Indiana.
EDWIN B. BENTLEY,
GEORGE W. PATRICK,
Advisory board, Charlestown township,
Clark county, Indiana.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given, that the Board of Education of the City of East Chicago, Indiana, that up to 8 o'clock P. M. on March 27, 1929, said Board of Education will receive sealed bids at the Board of Education's office, East Chicago, Indiana, for the erection and construction of said school building in accordance with plans and specifications, as follows:

1. Bids will be received in accordance with specifications designated by architect as "General."

2. Bids will be received in accordance with specifications designated by architect as "Electrical."

3. Bids will be received in accordance wtih specifications designated by architect as "Plumbing."

4. Bids will be received in accordance with specifications designated by architect as "Heating and Ventilating."

The estimated total cost of said school building as shown on said plans is One Hundred Sixty-Five Thousand ($165,000.00) dollars.

Plans and specifications may be obtained from the office of the architect, Karl D. Norris, 205 Calumet Building, East Chicago, Indiana, upon the deposit of a certified check for Twenty-Five ($25.00) dollars, which amount to be returned when plans and specifications are returned.

Above building to be located at northwest corner of Theodore Roosevelt Junior High School, located at 141st Street and Magoun Avenue, East Chicago, Indiana.

Each bid filed with the undersigned Secretary of the Board of Education must be accompanied by a bond equal to the amount of the bid; made payable to Edwin J. Carlson, Treasurer, East Chicago School Board; signed by the bidder and at least two free-hold sureties, residents of Lake County, Indiana, or by a bonding or surety company, authorized to do business in Lake County, Indiana, which bond shall guarantee the faithful performance of the work so bid for, according to the plans and specifications, which may be seen and inspected at the office of the Board of Education in the McKinley School, East Chicago, Indiana. All bonds will be subject to the approval of the Board of Education. No bid will be considered that does not comply with the law. These bidders' bonds to be used as construction bonds for successful bidders.

The Board of Education reserves the right to reject any and all bids.

(Signed) MRS. BERTHA E. McQUAID,
Secretary, Board of Education,
East Chicago, Indiana.

BUILDING INDUSTRY OF INDIANA PROGRESSES THROUGH ORGANIZED EFFORT AND CO-OPERATION

Status Today Had Its Beginning In Pronouncements Sounded at 1919 Convention of Architects

There is always an almost indescribable sense of gratification at the achievement of a goal, and in view of what has been accomplished for the building industry in Indiana in the past decade every member of the Indiana Society of Architects is entitled to a pardonable personal pride in his state association.

Ten years ago the industry was poorly organized, all association effort was more or less feeble and what there was of it was almost purely local. Also there was a tendency toward mistrust, suspicion, of the other fellow in kindred and allied fields of endeavor and it was a hard matter to get building men together for a discussion of mutual problems. There were, however, two infant, struggling, state organizations, the Associated Building Contractors of Indiana and the Indiana Society of Architects, both seeking to extend their influence throughout the state.

The Dawn of a New Era

On December 9, 1919, the Indiana Society of Architects met in annual session at the Chamber of Commerce, Indianapolis. In the light of that which has followed that was a memorable meeting. In that gathering of architects was a man of real vision, a man who fully sensed the needs not only of the architects but also the contractors and the building industry of the state as well. He was none other than the late E. Hill Turnock, architect, of Elkhart, Indiana, whose name is written high, indelibly, and in bold letters across the record of the Indiana Building Industry as one who, through his pronouncements, did for it as much and possibly more than any other one man. The pity is that he could not have lived to have seen the materialization of his proposals.

Rendering of Distinct Service By An Association Only Excuse For Its Being

Ten years ago Mr. Turnock, then president of the Indiana Society of Architects said in his address to the members:

"The only excuse that an organization such as this one can offer to its members for its existence is a distinct service, something that will assist in the solving of problems that can not be solved individually. * * * What we must all do is to throw our experiences into the pot for the general good.

Co-operation of Vital Importance to Welfare of the Building Industry

"At this point I want to say a few words regarding co-operation with the contractors. I consider this matter of most vital importance to our profession and the building industry. It is a tender subject and doubtless all of you have very pronounced ideas regarding it. The whole world is ripped and torn by revolt and revolution and it has affected everything from individuals to nations. It is our duty to see that the Building Industry is readjusted to the new conditions in an orderly manner. Co-operation by those interested in the various lines of building will accomplish this readjustment in seasonable time. The Architect, Contractor, Engineer and Material Supply Man is each essential to construction effort and to that extent are all workmen. What is most essential to co-operation is confidence in each other so that harmony prevails. My years of observation and experience tell me that one of the serious difficulties between architects and contractors is that the latter view the former as judge, jury and executioner. * * * The architect must eliminate inconsistencies from his specifications that put him in an indefensible position in the eyes of the contractor. * * * I believe if the architects and contractors can sit down together, speak freely and frankly in a spirit of concession a large amount of disputatious matter would be settled and buried.

"Building construction under any conditions is a task, a man-size job if the work is done conscientiously. If architects and contractors can get together, each party recognizing that he has something to learn and something that it is better to forget that is the spirit of co-operation that is needed and needed badly."

Later in his speech President Turnock strongly advocated the holding of regional meetings not only for architects but for contractors and others and also such meetings of combined building interests. Gatherings of this nature he suggested would widen acquaintanceships, offer closer contacts and create mutual respect for the other fellow.

Strong for State Building Code

Then, too, he said: "I am of the opinion that second to none of our objects should be the establishment of a statewide Building Code for Indiana. The Indiana Society of Architects is the proper body to espouse this cause and seek for its enactment.

Another Idea That Was An Innovation

"In conclusion, I wish to set forth an idea that I deem to be one of the most important steps for the society to take: that is, for the architects of Indiana to suggest and work for the establishment of a Board of United Building Interests of Indiana, made up of duly appointed representatives from the membership of the Associated Building Contractors of Indiana and the Indiana Society of Architects with possibly representatives from the Indiana Engineering Society. The purpose and function of such a body would be to bring about complete co-operation between the different departments of the building interests, in all matters, pass upon uniform contract forms, promote legislation necessary to the welfare of the building fraternity and the advancement of the whole industry. * * * The

BUILDING INDUSTRY PROGRESS

(Continued from Page 3)

building interests of the entire State must be represented in a comprehensive manner on such a Board."

Secured Aid of Contractors at the Outset

But that was not all in tne new order which Mr. Turnock sought to introduce. He had planned his campaign well, had gone to the Associated Building Contractors of Indiana with his ideas, "laid his cards on the table" and was successful in inducing M. J. Hoffman, Evansville, Ind., then president of the state contractors association, to appear before the architects' convention for an address. This latter move also an innovation and caused considerable surprise when Mr. Hoffman's part in the program was announced.

So thoroughly was Mr. Turnock convinced of the need for co-operation between architect and contractor that he boldly braved criticism and staked all on bringing the president of the State A. B. C.'s before the architects of Indiana as a means to get such co-operation started.

Mr. Hoffman expressed the pleasure of his association at the invitation extended, assured the architects that his organization was heartily in accord with any move that would tend toward co-operation of the building interests, generate greater harmony and make it possible for all to work together for the betterment of conditions, the advancement of the industry and make for better structures.

Prophetic words and actions, those. There was the beginning of a highly developed condition of association of building interests as it exists today in Indiana, and out of that association, in other words co-operation, have developed excellent things for the state building industry that have raised it far above the level as existed ten years ago.

Some Were Skeptical

Many at the start were skeptical, many said the ideals advanced were laudable but could never be worked out to a practical operation.

However, the ideals proposed appealed, lent incentive, took hold, and slowly but surely developed. The guiding impulse back of the Indiana Society of Architects was to render service to the state architectural profession, but it extended beyond that and sought also to be of service to the building industry as a whole. Any narrowness, selfishness, that might have existed was wiped out by the contact instituted by Mr. Turnock through a bringing into the picture of the contractors. Both the architects' and the contractors' associations began to see things in a bigger light and to concern themselves with general rather than petty, individual problems. Further, the two interests were drawn closer together at the realization of their responsibility to each other and to the whole industry.

First Points Stressed Soon Become Active Realities

Thus service and co-operation, two proposals of Mr. Turnock became effective, reached materialization in a very short time.

These two led to the custom of holding regional meetings about the state and developed closer contacts, creating better understandings, truer personal appraisals, not only of the men themselves but of the varied businesses, too.

Effort Expanded

And then out of the above came a realization that the two must expand their forces, that greater power was necessary to effect improved conditions, and so the engineers and organized labor were included in the scheme of co-operation. The idea of the need for a building code of state-wide application became more apparent steadily as the years moved on and with the architects, contractors, engineers and labor working in unison to that end legislation was enacted in 1923 creating the Administrative Building Council of Indiana whose duty it was to formulate and put into effect as soon as possible Standard Building Rules and Regulations. It took five years of earnest effort to compile such rules and regulations, practically a State Building Code, which were promulgated and became effective in October, 1928. Thus, once more, another ideal of E. Hill Turnock became a reality.

United Board of Building Interests Takes Form in a State Building Congress

And, last but not least, Indiana today has a State Building Congress, a body, in construction, similar to that proposed in 1919 by the president of the Indiana Society of Architects, only he styled it a Board of United Building Interests. The function and purpose of the present congress is identical with that suggested a decade ago by Mr. Turnock.

Success Realized Due to the Indefatigable Work of Many

Don't get the idea that one man or any one set of men put these things across, instead, it has taken the supreme effort of the architects', sub-contractors', engineers' and labor's organizations, working in full harmony and co-operation, and even almost super-human effort on the part of individuals representing these organizations, to achieve the end that has been gained. That is the beauty of it all, the whole presents an excellent example of what can be done through organized effort. Also it demonstrates the worth of a man of vision, for all of these things were but visions in 1919, ideals ably presented. The Indiana Society of Architects was fortunate in having him included in its membership and the Building Industry was doubly fortunate to have him on its side.

Exetent of Influence Is Far-reaching

There are those who contend associations don't get one anywhere; it all depends on the membership, what actuates those members and the effort they are willing to exert. Many building men in Indiana are not included in the builders organizations chiefly because they do not choose to be but, every building man in the State is effected by what the organizations have done, and operates under the beneficial conditions that the associations have brought about. Some may object to what has been done and feel that restrictions have been imposed upon them by the legislative and other measures in vogue, but no effort has been made to interfere with the individual, rather, the one incentive back of it all is to effect the greatest good for the greatest number.

BUILDING FIGURES AT INDIANAPOLIS SHOW IMPROVEMENT

Not, However, Up to Those Registered a Year Ago

New Apartment and dwelling construction operations, to the estimated valuation of $593,625, or 66.8 per cent of the entire volume of new work launched during the month, kited the February building figures at Indianapolis nicely to give the month

a 49 per cent boost over the January record this year.

But, here's the rub. February a year ago was unusually good for so early in the season, the result of the new building activity being a $1,093,433 volume of business for the month. This year things have not been so brisk and the February total for 1929 was 19 per cent less than that for the corresponding period a year ago.

The official figures reported by Mrs. Clara Oxley, statistician for the city inspection department are:

Classification of Types	Per.	Est. Val.
Apartments	4	$246,500
Business buildings	9	78,800
Dwellings	67	347,125
Industrial buildings	4	32,500
Miscellaneous	200	78,505
Repairs	130	104,468
	414	$887,898

BUILDING INDUSTRY NEEDS THE AID OF ALL THROUGH ASSOCIATION AGENCIES

That Is the Best Way to Settle Problems

All successful organizations are founded upon good character. No organization can expect to grow, prosper and endure if not conducted with the utmost integrity. A pretense may flourish for a while until the rank and file discovers the leak, when it inevitably collapses, because its aims and objects have been fraudulent. With this thought in mind what do the Associated Building Contractors of Indiana, the Indiana Society of Architects, and the Indiana Building Congress mean to the state building industry? It is difficult for some contractors to see the value in anything unless there is some monetary return on their investment. There are no civic or trade bodies who pay dividends in dollars. The function of each is to closely bind together various groups, firms and individuals into a common cause. Their problems then become the concern of all and when a solution is reached, benefit is derived. Any association through contact with its membership should instill good will and understanding.

Advancement in any industry comes because of close association. Rapid strides have been made in all lines. So, too, in the advancement if the building industry is to forge ahead, all should remember and share the burden. The various executive boards are conscientiously endeavoring to point the way, however, the co-operation of all building men is needed to push the many problems across. The benefit derived from anything is in direct proportion to the energy injected into it. It may take a little while to get down to such a basis, but the real purpose is to reach all in an earnest effort to increase the membership.

A CIVIC FIELD DAY FOR ARCHITECTURE

Whole City's Attention Directed To the Profession

Every architect in Indiana is cordially invited, in fact urged, to attend the regional meeting of the Indiana Society of Architects to be held at Fort Wayne, Ind., Friday, March 22, and also the evening dinner meeting that day at the Chamber of Commerce.

This is to be the grand finale of a two weeks' local attention devoted to "Architecture" under the sponsorship of the Chamber of Commerce and the Fort Wayne Society of Architects. Special plans have been arranged to make it a gala occasion. While many attractive features have been arranged for the evening the principal one will be the presentation of Henry Hornbostle, nationally known architect of New York and Pittsburgh, who will deliver the main address. The local architects are looking forward to the attendance of many leading citizens of the city and also hope to be able to greet numerous visiting architects.

Architecture is having its day in Fort Wayne where a full two weeks' civic program centering around it has been put on. It is a part of a general program conceived by the Chamber of Commerce who has set apart individual specific periods during which public attention is centered on the arts, sciences, history, industry and other subjects.

The two weeks' program devoted to "Architecture" consists of daily radio talks by local architects, addresses on the subject before luncheon and service clubs, "Studio Talks" relative to architecture, at the Little Art Theatre, prize competition amongst high school art students for a design for cover for proposed architectural magazine, and the Indiana Society of Architects' Architectural Exhibit which was on display at the Fort Wayne Art School, which is open to the public.

AN ARCHITECT'S SUPERINTENDENT BROADCASTS AN EARFUL

By LEO, THE THINKER

A new subdivision was being laid out in Hell. The Hon. J. Augustus Satan was looking over his new suburb, and pulled up his new Transite-bodied, air-cooled roadster close to a blistering flame and paused in the welcome heat of its refreshing blaze.

For a long time the Hon. J. Augustus had been a chronic sufferer from prickly coolth, and it was only when he was close to a searing flame that he really felt comfortable. Besides, he was worried—greatly worried.

His Hellish Environs, originally intended only for liars and lapsers of the Moral Law, had become so crowded because of the recent manufacture of so much bootleg morals, that he was hard put to provide accommodations. His Competitor up the Street was receiving only these Moral Racketeers, the rest of the human race were apparently joyfully jazzing down the statutory path to enjoy the society of those they liked.

Two clinker skinned demons appeared upon the coalescing pavement, dragging an apparently intelligent individual who evidently did not like his treatment, nor did he like his surroundings, nor the work going on; in fact he was running off at the mouth in a manner that noisily proclaimed that nothing suited him. "Your Excellency," said one of the clinker skinned demons, "We've got to find a new place for this earthil. He's been roaring around bawling out everybody in the place. Just now that gang we've got on that rush job of chain grate terraces for frying Specialty Salesmen, said he'd either have to get the earth off the job or they'd all go back to concentrating B. T. U.'s for Contractors. So we thought we'd better haul him up in front of you before he put Hell completely on the bum."

The Hon. J. A. Satan calmly regarded his customer: "What is your name?" he asked softly.

"My name is Ambrose Mucketgargler and I am an Architect's Superintendent. You seem to rate a lot of attention from these birds so let me tell you what I think of this place."

J. A. leaned back on his asbestos cushions and regarded his victim quizzically.

"Your receiving system is lousy," began Ambrose, "and your distributing system is run like a kid on a sidewalk with a Kiddie Kar. Your corridors are not arranged with an idea of taking care of your peak loads. Your waste heat is not properly bypassed to your incinerating chambers, and your tankage is hopelessly mixed with your fatty greases. The pyrographs don't register within ten degrees of your thermocouples and the style of architecture on your various buildings runs all the way from silos to cyclone cellars. In fact, there's nothing here I couldn't improve. This isn't an institution—it's a madhouse." Here Ambrose was interrupted by the whistle blowing for lunch. The Hon. J. Augustus stepped on the starter, and leaned over the side of his car and spoke to the two demons who held Ambrose. "What the hell does this bird expect Hell to be—a summer resort? Take him back to earth and turn him loose. He's just what I want on earth to give Contractors a taste of Hell before I get hold of them. And," he added diabolically, "when he gets through with them and they ALL finally come here, they'll be satisfied to stay, and all easier to handle and will welcome Hell as a peaceful Heaven." (From Bulletin of the Illinois Society of Architects.)

Brunswick, 309 First National Bank Bldg., Fort Wayne. Owner, Bethlehem Evangelical Lutheran Church, Rev. M. Reinke, 2814 Alexander street; Edward A. Frank, 2921 Reed street; H. J. Kiess, 3320 Alexander street; Fred C. Gallmeyer, 2917 South Anthony boulevard; William C. Gerding, 2638 South Anthony boulevard, all on building committee. Receiving bids to 7:30 o'clock p. m., Tuesday, March 19th. The following are figuring the general contract: Rump-Kintz Company, 210 Medical Arts Bldg.; H. Wehrenberg and Sons, 618 South Clinton street; Hackmeier and Son, 1517 Columbia street; Art Rodenbeck, 2615 West Drive; Schinnerer and Truemper, 3630 Bowser street; Henry Hoffman, 2814 Weisser Park avenue; Buesching-Hagerman and Company, 402 East Superior street; Max Irmscher and Sons, 1113 First National Bank Bldg.; Fred E. Kruckenberg, 2527 South Anthony street; Ernest C. Heckman, 2226 Indian Village boulevard; Fred D. Everding, 1214 Summit street; Fred Grote, 211 West Leith street. The following are figuring the plumbing and heating: August Lampke, 1025 Maumee avenue; Rose and Hermann Brothers, 2934 Weisser Park avenue; A. Hattersley and Sons, 208 East Main street; Schwegeman-Witte Company, 121 East Jefferson street; H. Leykauf and Son, 1325 Union avenue. The following are figuring the electrical wiring: Louis Gerke, 3022 Oliver street; Fisher Electric Company, 1740 Lafayette street; Dix-Kelley Electric Shop, 226 East Berry street; Carl Hambrock, 2918 John street, all of Fort Wayne.

Residence and Garage: $20,000.00, 2-stys. bas., Oakdale avenue, Fort Wayne. Archt., George L. Ohmart Company, 220 Cooper Bldg., Fort Wayne. Owner, Samuel C. Cleland, 343 Arcadia Court. Revising plans, will receive new bids soon. Brick veneer over frame, stone trim, vapor heat, tile baths, wood sash, hardwood floors, metal lath.

***Residence and Garage:** $18,000.00, 2-stys. and bas., Warsaw. Archt., Larimore and Parkinson, 818 Tri-State Bank Bldg., Fort Wayne. Owner, C. L. Maish, Warsaw. Plans in progress. Brick veneer, half timber, stucco, warm air heating plant, asbestos shingle roof, two tile baths, mechanical refrigeration.

***Residence and Garage:** $10,000.00, 2-stys. and bas., Fort Wayne. Archt., Larimore and Parkinson, 818 Tri-State Bank Bldg., Fort Wayne. Owner, W. C. Allen, 604 West Washington street. Receiving bids now. Brick veneer over frame, stucco, steel casement sash, wood shingle roof, warm air heating plant, mechanical refrigeration.

Contracts Awarded

***Factory Building:** $400,000.00, Bueter road and New Haven avenue, Fort Wayne. Supervising architects, Larimore and Parkinson, 818 Tri-State Bank Bldg., Fort Wayne. Owner, Steinite Radio Company, Lester S. Abelson, general manager, Atchison, Kansas. General contractor, Buesching-Hagerman and Company, 402 East Superior street; plumbing, heating and sprinkler system awarded to Hipskind Heating and Plumbing Company, 1725 Winter street; electrical wiring awarded to Dix-Kelley Electric Shop, 226 East Berry street, all of Fort Wayne.

***Club House** (addition and alterations): $9,000.00, Huntington road, Fort Wayne. Archt., Pohlmeyer and Pohlmeyer, 260 Central Bldg., Fort Wayne. Owner, Fort Wayne Country Club, 920 Tri-State Bank Bldg. General contract awarded to Buesching-Hagerman and Company, 402 East Superior street; plumbing and heating awarded to A. Hattersley and Sons, 208 East Main street; electrical wiring awarded to V. M. Nussbaum, 220 Montgomery street. Work consists of new showers, steel lockers, metal toilet partitions, basement, garage, decorating, alterations.

GARY

***High School Building:** $900,000.00, 3-stys. and bas., located at Madison and 45th streets, Gary. Archt., W. B. Ittner, 911 Locust street, St. Louis, Mo. Owner, City of Gary, Board of Education, William A. Wirts, superintendent of schools, Garfield and 5th streets, Gary. Receiving bids to 7 o'clock p. .m ,Tuesday, April 9th. Brick, reinforced concrete fireproof construction, stone trim, steam heating system, composition built-up roof, structural steel, terrazzo, tile and marble floors, linoleum, steel sash, wood sash, metal lath, steel lockers, showers, kitchen and cafe-

teria equipment, steel stairs. Will contain classrooms, library, study halls, offices, laboratories, auditorium, gymnasium, art rooms, kitchen and cafeteria.

***High and Grade School Building** (fire rebuild): $100,000.00, 2-stys. and bas., Merriville, Indiana, Ross township, Lake county. Archt., N. S. Spencer and Son, 180 North Michigan avenue, Chicago, Ill. Owner, Henry C. Sievert, trustee, Crown Point. Receiving new bids to 2 o'clock p. m., Tuesday, March 26th. Brick, stone trim, reinforced concrete floor and roof construction, composition built-up roof, steam heat, hollow tile, mastic floors.

MUNCIE

***Grade and High School** (addition): $60,000.00, 1-sty. and bas., 105x110, Royal Center, Indiana, Boone township, Cass county. Archt., Houck and Smenner, 108 East Washington street, Muncie. Owner, Murton E. Turner, trustee, Royal Center. All bids rejected, revising plans. Brick, stone trim, hollow tile, structural steel, composition built-up roof, steam heating plant, steel sash, reinforced concrete, plumbing, electrical wiring. Will contain six classrooms and auditorium.

SOUTH BEND

***Junior High School** (addition): $100,000.00, 3-stys., 65x95, "James Whitcomb Riley School," located at 405 East Ewing street, South Bend. Archt., Austin and Shambleau, 111 North Lafayette street, South Bend. Owner, Board of Education, W. W. Borden, superintendent, 228 South St. Joe street, South Bend. Receiving bids to 10 o'clock a. m., Friday, March 29th. Brick, concrete, steel, steam heating system, composition built-up roof, plumbing, electrical wiring.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

The undersigned board of trustees of the school city of Bedford, Indiana, hereby gives notice that on Tuesday, April 2, 1929, at 1:00 p. m., at the office of the superintendent of schools of the city of Bedford, Indiana, they will receive bids for the erection and completion of an addition to the Stalker school building and for the making of certain repairs in the said school building, and at the same time and place, will also receive bids for the heating, ventilating, plumbing and electric wiring for said building in accordance with plans and specifications prepared therefor by Elmer E. Lunlap and Norman H. Hill, associate architects, and adopted by the board of trustees, said plans and specifications now being on file in the office of the school board, state board of accounts, and the architect.

All bids must be in writing on forms prescribed by the state board of accounts and sealed and in every respect must conform to the laws of the state of Indiana and to the rules and regulations of any governing state boards of the state of Indiana. The right is expressly reserved to reject any and all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Separate bids will be required on the different portions of the work as follows: General contract, heating, plumbing and electric wiring. Combination bids of any two or more portions of the work will be considered.

Each bid shall be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to the trustees of the school city of Bedford, Indiana, and will be held by them as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a surety bond for the full amount of his bid, approved by the trustees for the due performance thereof, if his bid or bids are accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school city of Bedford, Indiana.

Copies of the general contract drawings and specifications may be obtained from the office of Elmer E. Dunlap and Norman Hill, associated architects, 1050 N. Delaware street, Indianapolis, Indiana, and copies of the drawings and specifications for heating, ventilating, plumbing and electric wiring may be obtained from the office of J. M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis, Indiana, upon the deposit of $10.00 for each set of plans and specifications. Said deposit will be returned to bidders upon safe return of the drawings and specifications on or before the day of the letting.

JOHN LAUGHLIN,
THEO. C. PENTZER,
MITCHELL R. GUTHRIN,
Board of trustees of the school city of Bedford, Indiana.
March 16

SCHOOL BUILDING
NOTICE TO CONTRACTORS

Notice is hereby given, that the Board of Education of the City of East Chicago, Indiana, that up to 8 o'clock P. M. on March 27, 1929, said Board of Education will receive sealed bids at the Board of Education's office, East Chicago, Indiana, for the erection and construction of said school building in accordance with plans and specifications, as follows:

1. Bids will be received in accordance with specifications designated by architect as "General."

2. Bids will be received in accordance with specifications designated by architect as "Electrical."

3. Bids will be received in accordance wtih specifications designated by architect as "Plumbing."

4. Bids will be received in accordance with specifications designated by architect as "Heating and Ventilating."

The estimated total cost of said school building as shown on said plans is One Hundred Sixty-Five Thousand ($165,000.00) dollars.

Plans and specifications may be obtained from the office of the architect, Karl D. Norris, 205 Calumet Building, East Chicago, Indiana, upon the deposit of a certified check for Twenty-Five ($25.00) dollars, which amount to be returned when plans and specifications are returned.

Above building to be located at northwest corner of Theodore Roosevelt Junior High School, located at 141st Street and Magoun Avenue, East Chicago, Indiana.

Each bid filed with the undersigned Secretary of the Board of Education must be accompanied by a bond equal to the amount of the bid; made payable to Edwin J. Carlson, Treasurer, East Chicago School Board; signed by the bidder and at least two free-hold sureties, residents of Lake County, Indiana, or by a bonding or surety company, authorized to do business in Lake County, Indiana, which bond shall guarantee the faithful performance of the work so bid for, according to the plans and specifications, which may be seen and inspected at the office of the Board of Education in the McKinley School, East Chicago, Indiana. All bonds will be subject to the approval of the Board of Education. No bid will be considered that does not comply with the law. These bidders' bonds to be used as construction bonds for successful bidders.

The Board of Education reserves the right to reject any and all bids.

(Signed) MRS. BERTHA E. McQUAID,
Secretary, Board of Education,
East Chicago, Indiana.

Vol. X INDIANAPOLIS, INDIANA, MARCH 23, 1929 No. 52

BUILDING CONSTRUCTION OPERATIONS THROUGHOUT COUNTRY CONTINUE TO LAG BEHIND 1928 VOLUME

However, The February Figures Show a Gain Over Those of January, Indicating Increased Activity

Further declines in building construction operations throughout the country, as compared with figures of a year ago, are indicated in a nation-wide survey, recently issued by S. W. Straus & Co., building financiers, New York City.

This survey covered building construction operations for February and was based on reports from the building inspection officials of five hundred and sixty-eight cities covering forty-eight states.

The past February figures, compared with those of the corresponding period in 1928, showed an approximate decrease of 20 per cent. However, there is some encouragement in the fact that February showed a 7 per cent gain over January this year.

As for the general situation as a whole the Straus Co., has this to say:

"The figures on the whole show a continuance of conditions maintained in the building industry for the last six months or more.

Building Materials

Preparations for spring building activity and weather fluctuations have contributed to the strength in the material markets, particularly in lumber, The prices of building materials for the most part remain stable, with only a few local changes reported.

Labor Conditions

Despite a slowing up of building construction, labor interests continue to emphasize the desire for a five-day week. Considerable controversy has arisen in New York regarding the shorter work week, with the state supreme court issuing an order to show cause why a restraining order should not be granted to prevent the enforcement of the five-day week in the electrical trades. The five-day week and a 10 per cent increase in wages had previously become effective when the court denied the application of the Building Trades Employers' Association to restrain the Electrical Contractors' Association from instituting the terms of a contract made with the electrical workers. The outcome of this continued controversy will be watched with interest as establishing precedent in other parts of the country. Regarding the five-day week, President Green of the American Federation of Labor has admitted that some industries are not ready for this change but reiterates that the shorter week is fundamentally sound although a conservative plan must be found for its introduction. No immediate solution for the five-day week is in sight, for there is continued resistance among the contractors generally to the adoption of this plan."

Indiana Fails to Rank Up With Leaders

Concerning Indiana as regards other localities two facts stand out prominently, once more she failed to rank up among the twelve states of the country showing the best building records and Indianapolis was crowded out from among the twenty-five leading building cities.

Indiana's leading cities showed the following new building volume, based upon the estimated valuation as indicated in the February issuance of building permits:

Cities	Est. Val.
Elkhart	$ 5,620
Evansville	122,279
Fort Wayne	173,970
Gary	14,600
Hammond	63,500
Indianapolis	887,898
Kokomo	31,080
Michigan City	21,650
Muncie	90,360
Richmond	12,600
South Bend	470,550
Terre Haute	29,088
Total	$1,923,195

BUILD AGAINST FIRE

Many a Building Saved From Fire on the Drafting Board

W. E. MALLALIEU, Gen'l. Mgr.,
The National Board of Fire Underwriters

Engineers who have made an exhaustive study of the problem have a positive answer to the question, "How can we curtail America's stupendous fire waste?" They say with distinct emphasis "The loss can be reduced if we will build to resist fire."

The initial step in building to resist fire is to have the plans drawn by an architect who understands the principles of fire prevention. Of necessity the structure must be erected in accordance with the plans and specifications and it follows that if the plans are right the finished building will be fire-safe. Many a building has been saved from fire while the plans were on the drafting board. The modern structure we now see in our cities are the result of many improvements and safeguards in the building industry.

In these large modern structures it is well to build so that there will be no great open areas through which fire can sweep unretarded. So far as possible fire-resistive material should be used throughout. In order to be fire-safe this type of building must be able to resist fire both from within and from without. One of the elementary rules is to build so that the flames will be confined to the place of origin until the fire department can arrive and extinguish the blaze. It is therefore imperative that stairways and elevator shafts be enclosed, and fire doors installed to separate the various sections of the structure. There should be no way for fire to spread from one floor to another. Often a building that would resist fire originating within its own walls would be an easy prey to fire starting in an adjoining structure. Many so-called "fireproof" buildings are exposed to danger by adjacent structures. In order to resist fire from the outside, windows may be equipped with wired

CONSTRUCTION OPERATIONS
(Continued from Page 3)

glass in metal frames. Another important element making for fire-safety is the installation of a complete equipment of extinguishing devices such as automatic sprinklers, standpipes and fire extinguishers.

A larger percentage of combustible material generally enters into the construction of dwellings than in the type of building just discussed. However, if due consideration is given to fire-resistive construction even a dwelling can be made relatively fire-safe. A fire in the average American home spreads very rapidly and it is vastly important to build so that the flames may be confined to the place of origin. Fire-stops which will retard the spread of fire from one floor to another are exceedingly important. A fire-resistive roof also aids materially in making dwellings fire-safe. When a heating plant is installed, due care should be taken to protect all combustible material from contact with parts of the equipment that will become hot, and all electrical work should be done in accordance with the electrical code. Chimneys also cause a large amount of fire waste annually, which could be prevented if they were built in accordance with standard specifications.

If one considers that the loss from fire every year is a half billion dollars the importance of building to resist fire will be recognized, especially when it is realized that material destroyed in this way can not be replaced and constitutes a severe drain upon the economic resources of the nation.

I. S. A. JOINS IN TO HELP FT. WAYNE ARCHITECTS CELEBRATE

Big Meeting Held

Fort Wayne architects closed a two weeks' city wide architectural publicity period with an enjoyable dinner meeting at the Chamber of Commerce Friday night, March 22.

It was the finale to an innovation sponsored by the Chamber of Commerce, who backed the local architects in putting forth a program dealing with architecture and its varied ramifications, that the citizens of the city might become more familiar with the function of the profession and be awakened to an appreciation of good building from an artistic and structural viewpoint.

In connection with the final day's program the Indiana Society of Architects held a regular quarterly session of the Board of Directors and also a regional meeting for members at Fort Wayne. Among the out-of-town visitors who made early reservations for the meeting were: George W. Allen, LaPorte, I. S. A. president; Secretary G. Caleb Wright, Directors Lee Burns and Herbert Foltz, all of Indianapolis; Directors Walter Scholer, Lafayette; Warren Miller, Terre Haute; Past President Karl D. Norris, East Chicago, and L. L. Johnson, Attica.

The featured speaker for the evening-dinner was Architect Henry Hornbostle, New York and Pittsburgh.

PRESIDENT OF INDIANAPOLIS BRICK MASON CONTRACTORS ASSOCIATION INJURED

Falling Scaffold Hurls Twelve Workmen To the Ground

A deplorable accident at Indianapolis the past week caused the painful injury of J. W. Nunamaker, president of the Brick Mason Contractors Association, the death of a carpenter workman and the more or less serious injury of nine other building trades mechanics.

It occurred at the new addition to the Tabernacle Presbyterian Church, 34th street and Central avenue, and was caused by the collapsing of a scaffold which precipitated the men to the ground thirty-five feet below.

CITY BUILDING CONGRESS MEMBERS ACQUAINTED WITH UNDERWRITERS' LABORATORY TESTING METHODS

Annual Election of Indianapolis Body to Be Held in April

The Indianapolis Building Congress ever striving in the interest of its members, not only in promoting the welfare of the industry, but, also, to enlighten said members along matters pertaining to develpments in the building field, presented as the feature speaker at its regular monthly noon luncheon, March 21, George B. Muldaur, general agent of the Underwriters' Laboratories.

One hears much about the Underwriters label relative to building materials and Mr. Muldaur sought to explain to his auditors what it was all about.

He told in interesting manner the aim and purpose of the Underwriters' Laboratories, in an endeavor to determine the worth and service of materials for use in building operations as a means to safeguard public health, safety and interest.

"The Laboratories' findings," said Mr. Muldaur, "establish a minimum standard of excellence and not a maximum. The standards to which tested articles must conform are not arbitrary nor are they the result of the Laboratories' own deliberations and ideas alone or of the Underwriters, the rating boards or government, state or city bureaus. They are arrived at through industry conferences composed of engineers, manufacturers of the actual devices under consideration, experts in their use and others whose technical and practical experience especially fit them to qualify as authorities. A standard, once accepted, becomes a fixed mark beyond which each device must go in point of excellence before it may find a place in the Labortories' lists or be re-recommended for its special type of service.

"Devices submitted to the Laboratories for listing are first tested by the engineers in charge of the special class of work to which they apply. An important feature of the Laboratories' Service is the advice and assistance they are enabled to give to manufacturers in perfecting worthy devices shown by the preliminary tests to require further development."

Among other things he spoke entertainingly of the methods of tests and how conclusions are reached. He referred particularly to the remarkably thorough tests on building columns, floors in relation to fire resistance and expansion under fire conditions, tests of fire resistance of walls and wall materials, and concluded with reference to tests of electrical devices covering the entire range of elecrical manufacture.

President Robert Frost Daggett at the conclusion of the session called attention to the fact that the Indianapolis Building Congress is now a year old and announced that the annual election of officers will be held at the next meeting in April, the date to be decided later.

SPRING DREAMS GIVE WAY TO A MORE WEIGHTY QUESTION

Rain and Copy Demand Cause Thoughts To Turn To Proposition of Professional Advertising

Ho, hum! And a couple of yawns.

Did you ever feel that way about this time of year? That feeling of being shut in when the spirit longed to be out in the open, out from under the burden of office toil?

You see, it's Spring once more, that is, according to the calendar and the balmy feel of the air. The time has come of which one dreamed, back when the wind was whistling around the corner of the house, the snowflakes were hurling themselves to destruction against the window pane and the good old steam was sort of gurgling through the radiator to make one forget the general disagreeableness of winter. It's that period of restlessness when one longs once more to take a good healthy swing with a golf club, hear the little gutta percha pellet go zinging through the air to come to earth once more and bounce and trickle across the greensward then come to rest, and beckon you on for another swing. Or, too, there's the imaginary call of the rippling stream that puts into one's hands the feel of a bending steel rod with taut tugging line. You know what we mean.

It's hard to shake it all off, and, because it's raining does not ease the bonds that hold us to the desk, drafting board, to business. Maybe when the latter picks up and keeps us stepping there won't be so much time to muse, to dream, to think of play.

Just how to inject more business into the picture has for some time irked the architect who has felt himself euchered out of commissions because prospective builders, knowing not what architectural service really is, fall for the contractor who advertises himself as an architect-builder, the planing mill that offers "free" plans, promoter builders and others who hold out the bait of saving the architect's fee to the owner.

There is no question but that the public is a large percentage of it, fails absolutely to appreciate that the architect, in addition to drawing plans, renders a distinct service that the "fee saving" shouter and advertiser does not.

This is a feature that must be drilled into the public. Times have changed from the earlier day order when the prospective builder went to the architect, actually hunted him up. Since then the sales problem has entered the scheme and everybody in the building field, so to speak, except the architect has been selling himself and his wares to the public. The latter has been so crowded with high powered publicity that it has come to feel that "plans is plans," just as "pigs is pigs," and thus service of an architectural nature has been pushed into the remote background, failing to be given any serious consideration by thousands and thousands of prospective builders.

It is a situation worthy of profound thought on the part of the architectural profession, it demands a remedy if the architect of the future is to function as he should in the building sphere. His is a distinct province and it should be safeguarded not only for the sake of the future practice of architecture, but for the sake of future building owners and the future permanence and beauty of American structures.

The matter of advertising the profession in the form of educational publicity to the public has of late years been a subject of debate amongst the architects and has frequently been discussed by Indiana members of the profession. There have been arguments for and against it with no definite decision being reached. Nor is it a subject that can be disposed of easily.

There was a time when advertising and architecture, in an associated sense, were not to be mentioned in the same breath, in fact, the mere whisper of an idea to advertise would have been an outrage in any group of recognized architects.

However, the thought has grown steadily that architects themselves must come to the fore in defense of the profession, and in some manner, collectively, advance its merit, its service, its unquestioned worth.

It was with such a thought in mind that A. C. Bacon, president of the Evansville Society of Architects, sought to sense the opinion of the Indiana architects on the matter of a state-wide publicity or advertising campaign. He sent out questionaires to every architect in Indiana on the proposition.

The response to that effort was the receipt of fifty-six replies from architects of sixteen cities, representing practically every section of the state from Lake Michigan to the Ohio River and the Ohio state line to the Illinois line. Fifty-one of those architects were heartily in favor of some sort of advertising activity, two were doubtful of any worthwhile results from such a move though favoring it if the majority of architects were for it, and three expressed themselves as opposed to any such proposition.

Those who favored advertising were all of the opinion that it should be of a general or collective nature and should be along the line of a high class, carefully worked out educational program. Several advocated that such a campaign and program be sponsored and conducted by the Indiana Society of Architects.

The answers though brief and to the point were intensely interesting, and all indicated that they were the expression of serious thought upon the subject showing conclusively that the Indiana architect is awake to the situation as it confronts the profession.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Steel Weighs Less Per Strength Unit Than Any Other Structural Material

One pound of steel will do more work, resist more stress, and carry more load, than one pound of any other structural material. . .

One pound of steel may cost more than one pound of any other structural material—it is worth more because it does more work with a maximum of safety and dependability.

The relative strength of steel and other materials per pound of material—work done—is as follows:

Steel	100
Granite	79
Brick	79
Longleaf Yellow Pine	86
Concrete	10

Note: The above ratios are based on compressive strength. Steel and longleaf yellow pine have tensile strength equal to their compressive strength. Granite, brick and concrete do not possess any appreciable tensile strength.

With steel, less volume and weight of material is used; less tonnage transported, handled and erected. The building weighs less, and lighter, less expensive foundations are needed.

on Tuesday, April 16, 1929, at 10 A. M., sealed bids will be received at the school building in the town of Marion, which is located about 5 miles northeast of Shelbyville, for the erection and completion of the new Marion Township, Shelby County school building in accordance with plans and specifications as follows:

1. On general construction.
2. On electric wiring.
3. On plumbing and sewerage.
4. On heating and ventilating.

The estimate cost of the building is $33,000.00. Plans and specifications may be obtained from the office of the Architects, Henkel & Hanson, of Connersville, Indiana, upon depositing $25.00, which amount will be returned in full, providing the plans are returned and a bona fide bid entered on or before April 16, 1929.

All bids must be in writing on form No. 96 and sealed and each bid shall be accompanied by a certified check of not less than 5% of said bid, made payable to K. Hord Gordon, Trustee, and will be held by said Trustee as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the Trustee and Advisory Board, if his bid or bids are accepted. The checks of those bidders who fail to be awarded the contract will be returned to them within 5 days after the letting.

Should the successful bidder, or bidders, fail to enter into such contract and execute such a surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Marion School Township.

The right is expressly reserved to reject any and all bids and to use sufficient time to investigate the bids and qualifications of the bidders.

Plans are now on file at the office of the State Board of Accounts, office of the Township Trustee, and the office of the Architects, and engineers, Henkel & Hanson, of Connersville, Indiana.

(Signed) K. HORD GORDON,
Trustee.

NOTICE TO CONTRACTORS

Notice is hereby given that the undersigned township trustee of Guilford Township, Hendricks County, Indiana, and the township Advisory Board of said township, will receive sealed bids or proposals up until the hour of Ten o'clock (10:00) A. M. of Monday, April 15th, 1929, at the Trustee's Office at Plainfield, Indiana, for the furnishing of the labor and materials and installing the following work, to wit:

1. Installation of sanitary toilets in the Junior High School Building at Plainfield, Guilford Twp., Hendricks Co., Indiana.

2. Installation of sanitary toilets in the Grade School Building at Plainfield, Guilford township, Hendricks County, Indiana.

3. Installation of sanitary toilets in the Grade School building at Friendswood, Guilford Township, Hendricks Co., Indiana.

4. Electric wiring and fixtures. Combination bids may be submitted on items 1, 2 and 3.

The plans and specifications for said work have been prepared by the J. M. Rotz Engineering Company of Indianapolis, Indiana, and such plans and specifications have been approved by the trustee and township Advisory Board. Such plans and specifications may be obtained by persons desiring to bid on said work from said Engineering Company upon the deposit of an amount satisfactory to it and to guarantee the return of such plans and specifications or they may be found on file at the township trustee's office, and also at the offices of the State Board of Accounts at the State House at Indianapolis, Indiana.

All bids should be submitted on forms approved by the State Board of Accounts and accompanied both by the usual affidavit of non-collusion and by a properly certified check on some bank within the state of Indiana for an amount equal to 3 per cent of the base bid.

The time for the completion of said work will be agreed upon at the time of the awarding of the contract therefor.

The successful bidder will be required to furnish a surety bond in an amount equal to the contract price to the approval of the said township trustee.

The deposit above named of 3 per cent in the form of a certified check will be adjudged to be the damages in the event the successful bidder refuses or fails to enter into a contract. The certified checks of the unsuccessful bidders will be returned to the owner thereof, as soon as an award and proper contract for such work have been made.

The trustee and board expressly reserve the right to reject any and all bids submitted.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given, that the Board of Education of the City of East Chicago, Indiana, that up to 8 o'clock P. M. on March 27, 1929, said Board of Education will receive sealed bids at the Board of Education's office, East Chicago, Indiana, for the erection and construction of said school building in accordance with plans and specifications, as follows:

1. Bids will be received in accordance with specifications designated by architect as "General."

2. Bids will be received in accordance with specifications designated by architect as "Electrical."

3. Bids will be received in accordance wtih specifications designated by architect as "Plumbing."

4. Bids will be received in accordance with specifications designated by architect as "Heating and Ventilating."

The estimated total cost of said school building as shown on said plans is One Hundred Sixty-Five Thousand ($165,000.00) dollars.

Plans and specifications may be obtained from the office of the architect, Karl D. Norris, 205 Calumet Building, East Chicago, Indiana, upon the deposit of a certified check for Twenty-Five ($25.00) dollars, which amount to be returned when plans and specifications are returned.

Above building to be located at northwest corner of Theodore Roosevelt Junior High School, located at 141st Street and Magoun Avenue, East Chicago, Indiana.

Each bid filed with the undersigned Secretary of the Board of Education must be accompanied by a bond equal to the amount of the bid; made payable to Edwin J. Carlson, Treasurer, East Chicago School Board; signed by the bidder and at least two free-hold sureties, residents of Lake County, Indiana, or by a bonding or surety company, authorized to do business in Lake County, Indiana, which bond shall guarantee the faithful performance of the work so bid for, according to the plans and specifications, which may be seen and inspected at the office of the Board of Education in the McKinley School, East Chicago, Indiana. All bonds will be subject to the approval of the Board of Education. No bid will be considered that does not comply with the law. These bidders' bonds to be used as construction bonds for successful bidders.

The Board of Education reserves the right to reject any and all bids.

(Signed) MRS. BERTHA E. McQUAID,
Secretary, Board of Education,
East Chicago, Indiana.

COMPARATIVE BUILDING COSTS IN INDIANA

Analytical Study Presented Following State-Wide Survey Among the Architectural Profession

R. W. NOLAND, Consulting Engineer
Fort Wayne, Indiana

The cost of buildings per cubic foot of enclosed space and the cost of mechanical equipment in percent of total building costs are vital and ever present questions with the Architect or Engineer, especially about the time that preliminary estimates on new projects are called for. Of course, much data has been collected by individuals and in some cases data has been compiled which is available to anyone who is interested, but in general there is still much to be desired when it comes to actual available information from which to make accurate estimates.

With the idea in mind of obtaining average results from a great number of actual projects, the writer conceived the idea of taking the state of Indiana as a unit and attempting to collect a mass of actual cost data from the architectural profession of the state. Naturally, if it were possible to collect sufficient data, the results obtained by averaging such data should be of considerable value to the architectural profession in making up preliminary estimates. A questionnaire consisting of a letter, an instruction sheet and a sample individual data sheet was made up and copies were mailed to each architect in Indiana. The questionnaire is self-explanatory and is herewith given in its complete form as follows:

The Request for Aid

"To the Architects of Indiana:

The writer is going to work up a technical paper entitled (ANALYSIS OF THE COMPARATIVE COST OF MECHANICAL EQUIPMENT AND TOTAL BUILDING COSTS IN INDIANA for presentation at the Winter Meeting of the American Society of Heating and Ventilating Engineers.

In order to collect basic data for this paper it is necessary to ask each Architect in Indiana to supply me with some information. Sheets (B) and (C) hereunto attached explain in detail just what I would like to have you furnish me. The final results will be available to all Architects and Engineers and I am sure that the information that will be contained therein will repay you many times over for the trouble that I am making for you now. I am placing no limit on the number and types of buildings on which you can furnish me information.

As soon as you have your data made up will you please mail it in the enclosed envelope which you note is addressed to The Indiana Construction Recorder. When the data from your office arrives at The Construction Recorder the envelope will be destroyed and your data sheets will be mixed with similar sheets so that their individual identity will be completely lost, therefore making your information automatically confidential. When all the data has been received by The Indiana Construction Recorder it will be turned over to the writer for compilation.

I hope that you can send in your data promptly as I have a big job ahead to work it up into final form. The Indiana Construction Recorder is co-operating with me in this work in a very whole-hearted manner. The paper in its final form will be published in The Recorder.

Thanking you most kindly for all the co-operation which you can give me and assuring you that I am going to produce some results which will fill a long-felt want and be of permanent value to you individually, I am

Very truly yours,
R. W. NOLAND,
Consulting Engineer."

Instructions for Architects Who Desire to Furnish Data on Individual Buildings

IMPORTANT: Please use the twelve following items as a key and place the data relating to each building on which you desire to furnish information on a separate sheet of plain paper in the manner indicated on accompanying Sheet C (Sample Individual Building Data Sheet) hereunto attached.

Item 1—BUILDING CLASSIFICATION. Simply note whether the building is School, Church, Theatre, etc.

Item 2—YEAR ERECTED.

Item 3—DESCRIPTION. (See sample sheet.)

Item 4—LOCATION. State whether building is located in a city, town, village, or rural district.

Item 5—TOTAL CUBICAL CONTENTS. Give entire cubical contents of building from basement floor to roof.

Item 6—DESCRIPTION OF HEATING AND VENTILATING SYSTEM. (See sample sheet.)

Item 7—TOTAL RATING OF BOILERS IN SQ. FT. OF DIRECT RADIATION.

Item 8—TOTAL COST OF GENERAL CONSTRUCTION.

Item 9—TOTAL COST OF HEATING AND VENTILATING SYSTEM.

Item 10—TOTAL COST OF PLUMBING SYSTEM.

Item 11—TOTAL COST OF ELECTRICAL WIRING SYSTEM.

Item 12—TOTAL COST OF PROJECT. This item includes the summarization of Item 8, Item 9, Item 10, Item 11.

Sample Individual Building Data Sheet

IMPORTANT: Please fill out the data on each building on a separate sheet as follows:

Item 1—School.

Item 2—1928.

Item 3—Two stories and basement, fireproof brick and concrete construction, 14 classrooms, 1 auditorium, 4 toilet rooms, 2 locker and shower rooms.

Item 4—Small city.

Item 5—646,950 cu. ft.

Item 6—Vacuum Steam, C. I. Boilers, Ventilation in classrooms and auditorium, Direct Heating elsewhere.

Item 7—26,000 sq. ft.

Item 8—$148,100.00.
Item 9—$18,800.00.
Item 10—$9,700.00.
Item 11—$3,400.00.
Item 12—$180,000.00.

(Note—For explanation of above items see instruction lay-out.)

The questionnaire was sent out with a full realization that the Architect, as a rule, is a very busy person and a questionnaire does not in general appeal to him. Moreover, the questionnaire contained twelve items some of which might require some time to answer properly. In spite of all these adverse conditions a large number of replies were received and such replies as were received were made up in a very careful and concise manner. The response was about 8 per cent.

Such results as were obtained and averaged up are presented herewith without apology. It is felt that the data pertaining to school projects can be considered to be representative and reliable because of the fact that more data were received on this type of building than on all other types combined. The data relating to types other than school buildings are of interest, but since the averages obtained in each case were from fewer buildings, the results undoubtedly are not as reliable.

All results obtained are shown in the following tables which are self-explanatory. It is hoped that these tables may prove to be of some value to the Architects and others who are interested in building costs in Indiana. Furthermore, it is hoped that perhaps someone else may become inspired and will think up a more brilliant method of collecting valuable data along the line of building costs.

FORT WAYNE ARCHITECTS PUT IT ACROSS IN NICE STYLE

Turn Whole City's Attention to Architecture

Seldom is a profession or a district field of business endeavor afforded such an advantageous opportunity to focus upon itself the concentrated attention of its own community as was the opportunity extended to the architectural profession of Ft. Wayne recently.

There is a Chamber of Commerce in the latter city that is intent upon doing more than just compile figures, build up membership, seek to secure more factories and look after business problems. While that body does all those things well, nevertheless, it has broadened its sphere of endeavor and is earnestly seeking to encourage the cultural tone and life of the city. Inspired by such a desire the Chamber of Commerce arranged a cultural calendar and upon it set apart, throughout the year, certain specified periods during which civic attention was to be directed to the various arts, music, etc., to history, literature, and also industry.

In the scheme of things the subject of architecture was included, and a two weeks' period, March 11 to 29, inclusive, was set aside in which the profession, its aim, purpose and service, was to be stressed for the benefit of the citizenry. Arrangements for a special program were turned over to the Ft. Wayne Society of Architects, the members of which made the most of the unusual and novel opportunity placed at their disposal.

There was an excellent Architectural Exhibit on display at the Little Art Theater, to which the public was invited; there were daily radio talks and addresses before the luncheon clubs on architectural subjects. Then to interest the youth of the city there was a competition held for which prizes were offered for the best design for a cover for a proposed architectural magazine.

The local architects played their part well, worked up much interest day by day, which was clearly evidenced at the closing ceremonies, an evening-dinner meeting at the Chamber of Commerce, March 29, when two hundred and fifty citizens from all walks of life turned out for the affair.

Sensing the spirit of the occasion and that which had gone before, Henry Hornbostle, New York and Pittsburgh, nationally prominent in architectural and art circles, the featured speaker of the evening, paid high tribute to the Ft. Wayne Chamber of Commerce for its effort to encourage among local citizens artistic appreciation.

In part, he said:

"It is important to foster artists since the commercial world dominates everything. It is important to make allowances for them, to call them queer, if need be, but not to standardize them.

"Centralization of power, in the commercial world, tends to suppress and kill individualism, and art is the best antidote against over-standardization of the individual.

"Our public schools are not sufficient for the development and preservation of the artistic temperament of the genius. Rather, the latter is crushed by the methods of our modern school, which is a tremendous machine to educate the largest number of people in the quickest time with the least taxes.

"As soon as a city has hope to have its own culture, standards and art decentralization will take place.

"Each community should have its own mode of expression for as soon as it begins to arrive at prosperity through commerce it will have leisure.

"It is for the stimulus to the imagination that thousands of Americans go abroad each year.

"Art cannot exist where there is snobbery. If the daughter of a bricklayer or the son of a peddler is an artist, whole hearted recognition should be accorded them."

Other speakers were Robert M. Feustel, vice president; J. B. Wiles, manager, and E. G. Hoffman, treasurer, all of the Chamber of Commerce, and Architect Guy Mahurin.

AIRPORT DEVELOPMENT OPENS NEW OUTLET TO BUILDING INDUSTRY

National Competition Launched to Develop Best Ideas For Plans Along This Line

Airport development—the latest offspring of aeronautical activity—has suddenly taken its place as the most important problem in the growth of commercial air transportation. It has already become apparent that air traffic can now grow no faster than the extension of adequate ground facilities in the form of airports and emergency landing fields. At the same time, airport development has begun to exert a powerful influence in many fields of business activity with which it is not normally associated in the public mind. It has given particular stimulus to the building field.

Colonel Harry H. Blee of the Airports and Airways Section of the Department of Commerce, made the statement early in February that about 1,000 airports were in various stages of actual development throughout the United States and that approximately 1,000 other airports were under consideration by communities, air transport companies, and other interested organizations. He commented upon the fact that these figures were merely estimates because they were changing so rapidly they could not be checked from day to day. Four months ago not over 400 airports were actually under way. It is also estimated that about three hundred millions of dollars will be spent during the next twelve months for the construction and development of airports, but this figure likewise is a mere guess. For 25 years people have been thinking about flying and flying machines. In that period they have become air-minded to a considerable extent. Within the last five years—or it may be said within the last year—public attention has been drawn to the commercial aspects of flying and to the need for airport facilities. People are now becoming "airport-minded."

Three hundred million dollars will probably be spent in the next twelve months for airport construction without the guidance of any sound experience. Much of this money may be wasted because communities can not foresee how best to plan their ports and the facilities which air transportation requires. Appreciating the potential loss which this situation creates, one of the large cement companies has made a timely gesture of tremendous significance to the nation as a whole, and to the aviation industry in particular, by establishing a national competition among architects and engineers for the design of airports.

It may seem absurd that a simple competition among people who are not necessarily flyers and who heretofore have not been directly concerned with the creation of flying facilities should be of great significance, but upon second thought, it will become apparent that through crystallizing the attention of thousands of designers on airport problems, many of the diverse ideas which are now guiding airport activity will be tested out and the good wheat separated from the chaff. Furthurmore, it is quite possible that such a competition will bring out new solutions of the airport problem.

This airports competition is a serious endeavor to contribute something of practical value as a guide for the expenditure of the billion or more dollars which inevitably will be spent within a few years for ground facilities in conjunction with commercial aeronautics. The competition program was formulated by a program committee of nationally-known experts, headed by Harvey Wiley Corbett, one of the country's foremost architects. The program committee consisted of four sections, architecture, engineering, city planning, and aeronautics.

Naturally, the modern airport must resemble to a considerable extent a well-equipped railroad terminal. It must provide a passenger station with ticket offices, baggage rooms, waiting rooms, public restaurant, toilets, and other commonplace facilities. Without doubt, it should provide an immigration and customs office, a postoffice, and adequate facilities for handling express and mail. There must be administration offices, not only for the various aerial transport lines which utilize the field, but for the control of flying operations at and adjacent to the port. There must be quarters for the field and flying personnel, and probably a hotel for transients as well as these permanent guests. There must be hangars for the care of planes, machine shop, fire station, gasoline and oil filling stations, an extensive and elaborate lighting system, and many other service facilities required for the care and operation of planes.

What does all of this mean to the practical business man? Obviously, the building industry itself is being stimulated by a new market for its materials. An airport construction program involves practically every type of material used in modern buildings. It involves extensive grading and drainage work, the laying of huge areas of pavement, the erection of miles of protective fences, the laying of more miles of underground electric conduit for lighting purposes, the planting and decoration of marginal strips, the construction of new roads for access to the heart of the community it serves, and often the development of new local transportation systems, including subways, bus lines, and railroad connections. If the airport is adjacent to water, other facilities are necessary for correlated shipping interests. This three hundred million dollars market (assuming the estimate to be well founded) for building materials is but one result of airport activity.

The competition, which will crystallize the thoughts of the nation's planning experts, will close in November, 1929. Prizes amounting to $10,000 have been posted to be distributed for the winning designs. Subsequently, it is intended that this material shall be published for the benefit of municipal and aviation interests. It is quite probable that the winners will also receive commissions as a direct result of this competition, for the development of actual airports.

MAYBE SO

One Never Can Tell

Those of us who derive a great deal of enjoyment from reading the catalogs published by dealers in rare books and first editions are frequently repaid for their time by discovering some priceless item like the following, which is offered by James F. Drake, Inc., of New York City. It is an autograph letter signed by Robert Burns, the poet, and is addressed to Mr. Boyd, Architect, of Dumfries. It reads as follows:

"I see at last, dear Sir, some signs of your executing my house within the current year. I am obliged to set out for Edith, tomorrow se'en night so I beg you will set as many hands to work as possible during this week. I am distressed with the want of my house in a most provoking manner. It loses me two hours' work of my servants every day, besides other inconveniences. For God's sake, let me but within the shell of it!"

This letter, written in 1791, has a singularly modern tone to architectural ears. It is a solemn reflection, that some such letter from one of our own clients may be selling for $500 in another 130 years.—Architectonics, Bulletin of Grand Rapids Society of Architects.

BOARD OF DIRECTORS MEETS

Business and Regional Session Held At Fort Wayne

Alert to the public recognition extended to the architectural profession of Ft. Wayne by the Chamber of Commerce of that city, who sponsored "Architectural Month," and wishing to show its appreciation of the program put on by the Ft. Wayne architects, the Board of Directors of the Indiana Society of Architects held its regular quarterly meeting in that city March 22.

There was a good attendance of directors and a keen interest shown in matters brought up for consideration. Particular attention was centered on a discussion of the newly passed Architects' Registration Law, legislation that has been sought for the past ten years by the architects of Indiana. Gratification was universally expressed that such a law is now in effect, it being the concensus of opinion of those present that it will have a strong influence in placing the profession and practice as a whole, on a higher plane. Further, it is felt that it will create a wider recognition for and a greater appreciation of the profession.

Now that Indiana architects have a law for which they have struggled for years it is felt by the I. S. A. directors that every move must be exerted by the architects themselves to protect that law. It was moved, seconded and carried that the Society's Legislative Committee should act as the official representative of the Indiana Society of Architects in all the latter's dealings and conferences with the Examining Board, to be created under the new law. This board will be composed of members to be selected from the Advisory Committee of the Administrative Building Council of Indiana.

The directors also devoted attention to the matter of the Annual Architectural Exhibit held by the Society, and it was felt that greater interest should be shown in the affair by all Indiana architects so that a larger and more representative display of the whole state profession would result. As an added feature to next year's exhibit prizes are to be awarded for the best exhibits submitted covering pencil sketches or full sized details of old structural landmarks. Lee Burns, Indianapolis, was appointed chairman of that department of the exhibit and was instructed to arouse interest in the move.

The next quarterly meeting of the Board of Directors will be made a regional gathering for members of the Indiana Society of Architects, and since it will be held in the summer the directors decided to accept Architect John Wright's invitation to meet at Michigan City. The affair will undoubtedly be held at one of the resorts out along the shore of Lake Michigan, thus lending special appeal that should assure a good attendance.

HOLDS AMERICAN ARCHITECTS THE EQUAL IF NOT SUPERIOR OF THOSE OF OTHER LANDS

Hard Work Not Mere Inspiration Begets Outstanding Structures

American Architects, painters and sculptors are the equals—and sometimes the superiors—of those in other lands, in the opinion of Cass Gilbert, New York Architect.

"Our people have not yet fully discovered that fact, but the time is not far distant when they will," Mr. Gilbert said. "Art, in any of its phases, develops only in communities that appreciate and encourage it."

On the beauty of the New York Life Insurance Company's new building, Mr. Gilbert said: "Architecture is a fine art which is, and always will be, the truest indication of the culture and civilization of a people, for, whether we will or not, the architecture of a nation inevitably records the needs and the aspirations of the time and place.

"There is something alluring and inspiring in a great and beautiful structure—the mind is exalted by it, the spirit is refreshed by it and the world responds to the appeal of beauty."

Mr. Gilbert laughed at the popular conception of how the idea for a great building is born—of an architectural "genius" pondering as the hours speed into the night, then taken by an inspiration, in one swift sketch producing towers and domes, facades and arcades and the other elements that form eventually into an overwhelming mass of beauty.

"Whatever the course in former years," he said, "the process of designing a business building today may be described as scientific efficiency plus good taste. It requires deep thought, long experience, earnest study, courage and business intelligence, as well as a little knowledge of proportion and the art of design."

INDIANAPOLIS

INDIANAPOLIS

***Office Building:** $1,000,000.00, 14-stys. and bas., located at the southeast corner of Monument Circle and East Market street, Indianapolis. Archt., Rubush and Hunter, 430 American Central Life Bldg., Indianapolis. Owner, Tower Realty Company, Leo M. Rappaport, 612 Illinois Bldg., Indianapolis. Receiving bids to 12 o'clock noon, Tuesday, April 16th. Stone exterior, reinforced concrete construction, steam heating system, 3 passenger elevators, 1 freight elevator, tar and gravel roof, steel stairs, metal windows, terrazzo floors, wood interior trim, hollow metal doors. Will have a 66 ft. front on the Circle, 88 feet on Market street, 105 feet in alley. The following are figuring the general contract: William P. Jungclaus Company, 825 Massachusetts avenue; Strathmann Construction Company, 712 Meyer-Kiser Bank Bldg.; Service Construction Company, 301 Castle Hall Bldg.; Mead Construction Company, 1027 Lemcke Bldg.; Hunkin-Conkey Construction Company, 618 Hume-Mansur Bldg. The following are figuring the plumbing and heating: Hayes Brothers, 236 West Vermont street; Freyn Brothers, 1028 North Illinois street; Callon Brothers, 24 South Alabama street; J. A. Diggle, 235 North Delaware street; Kirkhoff Brothers, 11 North New Jersey street. The following are figuring the electrical wiring: Sanborn Electric Company, 309 North Illinois street; Charles L. Smith Electric Company, 122 South Pennsylvania street; Hatfield Electric Company, 102 South Meridian street; Stradling Electric Company, 353 Massachusetts avenue. The W. H. Johnson and Son Company, 330 East St. Joe street is figuring the heating.

***High School Building:** $600,000.00, 3-stys. and bas., "Irvington High School," located at Riley avenue and East Washington street, Indianapolis. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Mech. Engrs., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, A. F. Walsman, business director, 150 North Meridian street. Plans nearing completion, ready about April 10th. Brick, reinforced concrete construction, structural steel, stone trim, steam heating system, composition built-up roof. Will accommodate 1,500 pupils.

***Bank Building** (remodeling): $25,000.00, located at Mitchell. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Owner, the Bank of Mitchell, Noble L. Moore, president, Mitchell. (Owner desires no personal solicitation.) Plans in progress, ready about May 15th. Work consists of general remodeling of bank, new vault fixtures.

***Chemistry Building:** $350,000.00 to $500,000.00, Indiana University, Bloomington, Ind. Archt., Robert Frost Daggett, 922 Continental Bank Bldg., Indianapolis. Owner, Board of Trustees, John Craven, Registrar, Indiana University, Bloomington, Ind. Preliminary plans approved, will start on working drawings soon. Brick and stone veneer construction, "L" shape.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 81, located at 17th street and Park avenue, Indianapolis. Archt., Kopf and Deery, 620 K. of P. Bldg., Indianapolis. Mech. Engr., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, A. F. Walsman, business director, 150 North Meridian street. Architect selected, plans in progress. Brick, reinforced concrete, structural steel, stone trim, steam heating system, composition built-up roof, toilet system, electrical wiring.

***Grade School Building:** $147,000.00, 2-stys. and bas., Public School No. 82, located at English and Emerson avenues, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Mech. Engrs., John M. Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, City of Indianapolis, Board of School Commissioners, A. F. Walsman, business director, 150 North Meridian street. Architect selected, plans in progress. Brick, reinforced concrete, structural steel, stone trim, steam heating system, composition built-up roof, toilet system, electrical wiring.

Grade School Building (addition): $70,000.00, 2-stys. and bas., Meridian School, Kokomo. Archt., H. Phillip Bartlett, 1050 North Delaware street, Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Board of School Trustees, Dr. J. A. Kautz, president; Kenneth Rich, treasurer; Dr. J. C. Stone, secretary, Kokomo. Plans completed, ready for bids soon. Brick, concrete and steel construction, entire new steam heating plant, both buildings. Addition will contain 8 classrooms, manual training, domestic science and play rooms.

School Building (addition and alterations): $20,000.00, Maplewood School, Connersville. Archt., H. Phillip Bartlett, 1050 North Delaware street, Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Board of Education, E. C. Dodson, superintendent of schools, Connersville. Plans in progress. Brick, entire new toilet system. Will include two new classrooms.

***School Building** (addition): $40,000.00, 2-stys. and bas., "Stalker School," Bedford. Associate archts., Elmer Dunlap and

STEEL INSURES STRENGTH AND SECURITY

Structural steel is used in one of the largest gravel barges ever built in Indiana, built for the Terre Haute Sand & Gravel Co., by Hetherington & Berner, Inc., of Indianapolis

STEEL IS PERMANENT

Structural steel will last indefinitely—its permanence is fixed scientifically. Bridges and other steel structures exposed to air and moisture require only cleaning and painting at intervals. The consensus of opinion among leading engineers is that no steel structure, which has had the most casual attention, has ever been seriously affected by corrosion.

The permanence of steel is a native characteristic of the metal, determined by the standards of its composition, manufacture, and fabrication. Fixed scientifically, it is a factor not dependent on construction conditions or the "human equation."

All structural steel members are designed with a big reserve of strength and endurance—a positive assurance of true permanence.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO CONTRACTORS

The undersigned Trustee and his Advisory Board, of Marion Township, Shelby County, Indiana, hereby give notice that on Tuesday, April 16, 1929, at 10 A. M., sealed bids will be received at the school building in the town of Marion, which is located about 5 miles northeast of Shelbyville, for the erection and completion of the new Marion Township, Shelby County school building in accordance with plans and specifications as follows:

1. On general construction.
2. On electric wiring.
3. On plumbing and sewerage.
4. On heating and ventilating.

The estimate cost of the building is $33,000.00. Plans and specifications may be obtained from the office of the Architects, Henkel & Hanson, of Connersville, Indiana, upon depositing $25.00, which amount will be returned in full, providing the plans are returned and a bona fide bid entered on or before April 16, 1929.

All bids must be in writing on form No. 96 and sealed and each bid shall be accompanied by a certified check of not less than 5% of said bid, made payable to K. Hord Gordon, Trustee, and will be held by said Trustee as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the Trustee and Advisory Board, if his bid or bids are accepted. The checks of those bidders who fail to be awarded the contract will be returned to them within 5 days after the letting.

Should the successful bidder, or bidders, fail to enter into such contract and execute such a surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Marion School Township.

The right is expressly reserved to reject any and all bids and to use sufficient time to investigate the bids and qualifications of the bidders.

Plans are now on file at the office of the State Board of Accounts, office of the Township Trustee, and the office of the Architects, and engineers, Henkel & Hanson, of Connersville, Indiana.

(Signed) K. HORD GORDON,
Trustee.

GUST S. BILLMAN,

FUNCTIONS OF A BUILDING CODE AND ITS IMPORTANCE TO A COMMUNITY

Official Control and Regulation of Building Construction Activities a Means to Increase Public Safety and Health

GORDON NELSON, City Building Inspector
Madison, Wisconsin

The control of the construction, alterations and use of buildings and similar structures through ordinance or legislation is a comparatively recent development of what is known as "police power," or "community power." Although recognized many years ago, police power was never expanded to the extent recognized today. Recently the complexity of life in large communities and the mechanical development of many new and often dangerous devices, gave rise to many problems for which a solution was necessary for public safety. By police power is meant "that inherent plenary power of a state which enables it to prohibit all things hurtful to the comfort, safety and welfare of society," subject, however, in its exercise to constitutional limitations, as laws cannot prohibit that which is harmless in its nature under the pretense of police power.

In order to exercise control over the erection, alteration or repair of any building, it is necessary for a municipality to show two things. First, that it has the power to forbid contemplated alteration, erection or repair, and second that it has lawfully exercised its power in the making of a prohibitory ordinance. Unless these two points can be established, a municipality, in general, is not able to interfere with building construction.

The necessity for ordinances regulating building construction is a fact beyond question. Whether such regulations can best be enforced by national or state codes rather than municipal ordinances is debatable. Practicability of enforcement is the greatest importance.

It has been proposed that the Federal Government draft a building code applicable to the entire country. Such a measure no doubt would produce far reaching results, but the necessity for employing a new force of inspectors by the government is not sufficient to warrant the expenditure. Furthermore such a plan would centralize power, which could not easily be kept out of politics. The personnel of the department would constantly be changing which would be unfortunate.

The necessity for enactment of building regulations in communities is being made more apparent each day. There is evidence to show that people prefer ordinances applicable to their own needs. They do not relish the encroachment of laws promulgated by state legislatures or by individual interests.

An efficient building department is an asset to every municipality, but this fact is often not appreciated until some catastrophe occurs, such as the collapse of a public building resulting in heavy loss of life, or a disastrous fire caused by faulty construction and protection. There is nothing mysterious or difficult in preparing a building ordinance when undertaken by men experienced in such work, and the expense is negligible when compared with the results obtained.

Purpose of Building Code

The purpose of a building code is to preserve the **life**; to insure the **safety**; to promote the **general welfare**; to make possible the enjoyment of the **liberty** and **happiness**; and to protect the **property** of the whole people by reasonable, just, safe and not unnecessarily expensive methods and requirements. In character a building code should be direct and plain in phraseology, accurate and clear in definition of terms, specific, definite and understandable in its requirements, avoiding complicated references; logical in its arrangement and free from double meanings or interpretations.

It is very important that a building ordinance should be clear, uniform and certain. An ordinance which lacks clarity to such an extent that it is impossible to tell what was or what was not intended to be prohibited has been held to be void. Also an ordinance wherein interpretations are left to the discretion of an officer is void for the lack of certainty and because it would grant arbitrary authority and involve an undue delegation of power.

Further, an ordinance should avoid improper delegation of authority. This is rather a difficult point to establish definitely, and one which causes considerable trouble in all building code work. It is proper for an ordinance to delegate ministerial functions, that is, to delegate the performances of an act the manner of which performance is clearly established, but it is not proper or possible to delegate legislative authority, although an exception to this rule is made when the state delegates legislate authority to the city through a charter, but in the case of a building ordinance there should be no such delegation, that is, a building official or board of officials should not be empowered to say what shall or shall not be done, or to describe or establish the manner in which things shall be done. As nearly as possible the thing to be done should be stated and described in the ordinance and the duty of the official is purely ministerial to see that the thing is done. But it has been held that this does not prevent the use of good judgment or discretion in the execution of the ordinance requirements. It can be clearly seen that the point is quite involved and because of the new and complicated nature of building requirements it has often been necessary to stretch a point, so as to permit the enforcing official to use discretion which is in excess of that usually delegated to public officials. It is probably safe to say that when such discretion is used wisely, that it would be upheld by the courts, but there is often a tendency in building codes to leave a wide margin of individual delegation in the hands of the enforcing officers and this is always objectionable.

A building code must necessarily avoid any attempt to regulate construction of building on aesthetic principles only. It is stated that "aesthetic considerations

EFFORT OF MATERIAL INTERESTS TO TINKER WITH, OR FRAME, BUILDING CODES SHOULD NOT BE COUNTENANCED

Sound Engineering Principles to Insure Safety and Sanitation Is What Is Needed, Not High-Powered Sales Promotion Ideas to Create Greater Business

FERMOR S. CANNON, Past President
Indiana Society of Architects

Human beings, early in their existence as organized groups, discovered the necessity of regulatory measures controling the actions of individuals composing the various groups; in order that certain benefits should be enjoyed by all equally and impartially. It is an interesting fact that when the balances of equal participation was disturbed something happened. Our histories tell some disagreeable stories concerning the necessary adjustments demanded by society when such a fundamental principle was disobeyed.

We find ourselves in America surrounded by an amazing amount of regulatory measures. Sometimes we wonder if it is necessary to further restrict and circumscribe our lives and actions with additional legislation. Most industries in our various commonwealths are not restricted in their operations. The one great exception to the rule seems to be the giant industry composed of many parts and known to all of us as the Building Industry. This great group has suffered severely in the past from too many "doctors," and from the fact that the regulations have not been coordinated. We are referring to the point that each great municipality has seen fit to impose restrictions concerning building construction without any attempt to carefully coordinate their codes of building with the regulations of other cities and towns and with the particular demands of the industry as a whole. This situation has led to great confusion and uncertainty in the ranks of the industry. It has also imposed real handicaps on the developments of those cities demanding that strict and sometimes unreasonable requirements be fully lived up to by the majority of the building public; while in contrast, other cities have gained at least temporary advantage due to more lenient measures. Both situations are deplorable and produce economic waste.

The Purpose Involved

This picture of the industry caused serious minded leaders to consider and adopt, if possible, certain fundamental remedies. In the first place a set of building rules and regulations is primarily concerned with establishing for one and all the assurance of "Safe and Sanitary" conditions existing and proposed structures used by human beings as shelter, place of business, or for the purpose of the manufacture of, or the sale of, any product used by men. The definition of the term "Safe and Sanitary" is explained as follows: "A building to be safe and sanitary must conform to certain minimum standards, such as structural requirements, fire hazards, exits, electrical wiring and appliances, proper ventilation and sanitary conditions." The industry has long acknowledged the basic fact that certain minimum requirements could and should be demanded in the use of building materials. For economical construction a way must be found, based on fundamentally sound engineering principles, by which new uses of old materials could be made useful and understandable to the industry and to the building public. It is quite obvious that the producers alone should not be intrusted with this responsible work. They understand the problems of manufacture and the well defined limits which should be placed upon the use of their materials. The constructors and fabricators of buildings were likely to err due to their economic position in the picture. The public, through lack of a broad understanding of underlying principles and requirements in the use of materials, is inclined to choose too often with the spirit of supposed economy rather than with an acknowledgment of the points of "safety and sanitation" involved in the buildings that society as a whole must use to sustain life and happiness.

Best Fitted Group for the Shaping of Building Codes

What interests could be called on to perform this essential duty for society? Administrative officers? No. Their function in the body politic requires that they be free from such responsibility. No police officer should ever make laws, if for no other reason than that of the temporary character of his position. From out of the great industrial picture comes the architect and engineer. The first great duty of professional men requires unselfish responsibility for the administration of their public trust. The facts of all phases of the industry of building are in their hands. Why should they not serve as the group best fitted to sift and survey the mass of regulations and from choas bring order and reasonable adjustments that would benefit all people without in any way injuring the economical adjustments of the industry.

Indiana's Answer to the State Code Problem

In answer to this question, the State of Indiana has created such a group. The law says that an "Administrative State Building Council" shall codify and promulgate building rules and regulations to insure the building public that so far as is possible all building construction shall be "Safe and Sanitary." Briefly, this Council consists of three state officials, the Secretary of the Board of Health, Fire Marshal and Chairman of the Industrial Board; composing the Administrative Committee, and working with them is an

EFFORT OF MATERIAL INTERESTS

(Continued from Page 5)

Advisory Committee consisting of three architects, three engineers, three contractors, and three labor representatives. This well balanced group is also intrusted with the approval of new devices and schemes of construction that may from time to time be evolved. This latter function provides for the future development of the industry, and assures that most desirable of all points—the coordination of all building rules and regulations throughout all the various townships, towns and cities of the state. The administration of building rules assures to all parties an equal right to the use of all proper refinements and improved methods in order that all people may share alike and without discrimination.

Any other plan of operation must fail sooner or later. Building rules have ceased to be books of instrucitons concerning the use of certain materials. The clear statement of the proper use of proper materials assures a more intelligent use of these same materials in the hands of competent building groups. This latter fact is of primary importance to the buying and building public; the one great element that must get a square deal if the building industry is to continue to fulfill its obligation to the society of the present day.

No Selfish Interest Should Be Allowed to Inject Itself Into the Building Rules and Requirements Scheme

To this end it is absolutely necessary that the making of building rules and regulations be kept on as high a plane of integrity and sincerity of purpose as it is possible to maintain them. No selfish or under-cover moves of any particular group should ever be allowed to control or divert the industry from this great responsibility and duty to the people of our rapidly expanding and glorious land of freedom and happiness.

FUNCTIONS OF A BUILDING CODE

(Continued from Page 3)

are a matter of luxury and indulgence rather than necessity alone which justifies the exercise of police power to take private property without compensation, bu this does not prevent the regulation of certain features of construction partly aesthetic in their nature, when such regulation can be justified on the grounds of public safety or sanitation."

The Public's Attitude

Proper organization of work in the degree found necessary in ordinary business is commonly thought unnecessary in the enforcement of building regulations, partly because the work is looked upon as non-technical and simple, and partly because of the dependence placed in the municipal building department for ultimate safety. This dependence is apparent in the attitude of the press and public toward building questions, and even in that of many technical men. It involves a belief that engineers, architects and builders are fallible, but that the building departments plan examination, and field inspection protects or ought to protect the public. Unfortunately, also, the daily work of building officials shows much fallibility, negligence, and incompetence and violation of law on the part of persons who propose to build. An official of one large city has stated that not one set of building plans submitted to his office can be approved without some changes to meet standards of good practice and code requirements.

It is imperative that a code be a set of minimum and not necessarily sufficient requirements, and by charging the designer with the responsibility for safe designing regardless of the minimum fixed by the code.

Dependence on the building department for safety is not warranted by facts. The building department should not assume any part of the duty of providing technical knowledge and skill to building operations. This duty rests clearly upon the persons who engage in the operation, and the department should confine itself to its obvious charge of enforcing and supervising the responsibilities of the builders. Further, the function of the department, a policing function, is to inspect rather than supervise and direct building work. When the party who engages in building relies on the department to insure safety, one's sense of responsibility largely disappears and it is found especially in purely speculative operations, that the municipal plan examination and inspection reduces the care and conscientious effort of the designer as well as of those who should provide direction and supervision of the work. It enables these private parties to transfer some of their work and duty to the department and the opportunity is extensively taken.

There are no legal rulings or ordinances which have a more direct influence upon the community than the ordinances regulating building construction. The health department and fire department usually get their request without argument. Yet when your analyze the purpose of a building department it is easily proven that with a code finely written and kept up to date with modern construction and with the proper help to administer the same, the work of both the health and fire departments would be greatly reduced. I do not mention this with any idea that these departments should be reduced at the expense of the building department, but when a department such as the building department is more than self-sustaining, and most of them are, it should be given the prominence and importance it deserves.

INDIANAPOLIS

School Buildings (4 dormitory buildings and superintendent's residence): $425,000.00 (appropriation for all work described herein), 75th street and College avenue, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Owner, Indiana State School for the Blind, George S. Wilson, superintendent, 40 East North street, Indianapolis. Plans in progress, ready for bids about May 1st. Brick, concrete and steel construction. Will include 4 girls' dormitory buildings and a residence for the superintendent. Owner and architects will receive bids on the power plant equipment, sewage disposal equipment, boilers, stokers, deep well pump, electrical fixtures. Present buildings in this group that are under construction are at the plastering stage.

***Church Building** (addition and alterations): $100,000.00, 2-stys. and bas., (addition, 2-stys., 90x125), located at Owensboro, Kentucky. Archt., Albert A. Honeywell, 413 Penway Bldg., Indianapolis. Owner, First Christian Church Congregation, Rev. Howard S. Stephenson, pastor, 616 St. Anne street, Owensboro, Ky. Receiving bids to 12 o'clock noon, Wednesday 10th. (Note extension of date of letting.) The following are Owensboro bidders, not previously listed: On the general contract: T. E. Sublett; L. A. Monarch; R. E. Bell; Davis and Hagan; W. L. Williams. The J. W. McFerran Plumbing Company is figuring the plumbing; the Owensboro Plumbing and Heating Company is figuring the plumbing and heating.

***Grade School Building** (addition): $70,000.00, 2-stys. and bas., Meridian School, Kokomo. Archt., H. Philip Bartlett, 1050 North Delaware street, Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Board of School Trustees, Dr. J. A. Kautz, president; Kenneth Rich, treasurer; Dr. J. C. Stone, secretary, Kokomo. Receiving bids to 11 o'clock a. m., Tuesday, April 23d. (See legal advertisement in this issue.) Brick, concrete and steel construction, entire new steam heating plant, both buildings. Addition will contain 8 classrooms, manual training, domestic science and play rooms.

School Building: $50,000.00, 1-sty. and bas., 72x91 (4 rooms), District School No. 15, Bridgeport, on National road, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving bids to 2 o'clock p. m., Monday, April 29th. Brick, fireproof construction, terrazzo corridors, hollow tile, stone trim, composition built-up roof, steam heating, plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

School Building: $31,250.00, 2-stys. and bas., 45x63 (4 rooms), District School No. 1, Flackville, Lafayette road, south of 30th street, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving bids to 2 o'clock p. m., Monday, April 29th. Brick, semi-fireproof construction, stone trim, composition built-up roof, steam heating plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

School Building: $30,750.00, 1-sty. and bas., 69x71, (4 rooms), District School No. 8, Rockville road at Garden City, Wayne township, Marion county. Archt., Charles Byfield, 923 Peoples Bank Bldg., Indianapolis. Mech. Engr., John Rotz Engineering Company, 704 Merchants Bank Bldg., Indianapolis. Owner, Vestal C. Davis, trustee, Rural Route 2, Indianapolis. Receiving bids to 2 o'clock p. m., Monday, April 29th. Brick, semi-fireproof construction, stone trim, composition built-up roof, steam heating plant, plumbing system, electrical wiring, electric well pump, septic tank, private water supply, wood sash, oak and pine interior trim, maple floors, steel stairs, metal lath.

School Building (4, 6 or 8-room addition): 1-sty. and bas., Speedway City, Wayne township, Marion county. Archt., McGuire and Shook, 941 North Meridian street, Indianapolis. Owner, Town of Speedway School Board, Howard Wilson, president, Speedway City. Plans in progress, will probably receive bids soon. Brick, concrete and steel construction. Will consist of an addition of either 4, 6 or 8 classrooms, alternate bids being received. Also the present gymnasium will be altered. The basement will contain the manual training and domestic science rooms.

***Residences** (2): $20,000.00 each, 2-stys. and bas., located at Houston, Texas. Archt., Burns and James, 314 Penway Bldg., Indianapolis. Owner, Katherine B. Mott, Warwick hotel, Houston, Texas. Sketches approved, plans in progress, will start work in about 30 days on residences

STEEL INSURES STRENGTH AND SECURITY

For Strength and Safety, the Liberty Theatre in Terre Haute, Ind., was framed in Structural Steel, fabricated and erected by Geiger & Peters, Indianapolis.

STEEL OCCUPIES LESS S

The inherent strength and stamina of structural steel mean that less bulk of material is necessary for safe construction. Where land values are high, a far more adequate structure can be erected with steel than with any other material.

Steel columns and beams occupy less space, consequently interiors can be larger, with construction members less conspicuous. Steel provides increased floor space, with better lighting and ventilating facilities.

onsequently
ers less con-
with better

The compactness of structural steel facilitates rapid and economical construction. No false work, staging, temporary supports, or forms are necessary. Stuctural steel goes into place cut-to-fit, complete, self-supporting. Workmen have the full use of floor space as the work proceeds.

Structural steel is stronger per unit of volume; that is, occupies less space per unit of strength than any other construction material.

CROWE SHORTENS THE STRAIGHT LINE BETWEEN TWO POINTS

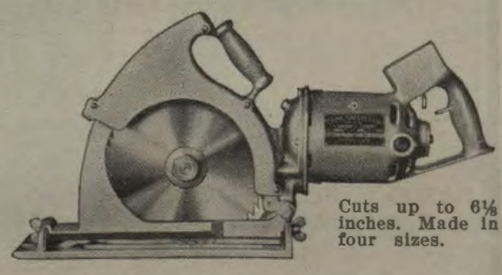
A straight line is short to a Crowe Safety Saw—no matter how long it looks. One man can cut it in less time than ten men with ordinary saws.

It works continuously. Driven by a G. E. motor from a 110 or 220-volt socket, it has lots of power, gearing does not heat, and the operator is given absolute protection. Blades are standard. Body is of aluminum alloy, making it easy to carry.

Anywhere a hand saw is used—and some places where it can't be used—the Crowe Safety Saw does the work better, and stands punishment longer than any other portable electric saw on the market.

Write for further information. Two cents invested now will bring you big dividends later. Slip that inquiry in the mail today.

Crowe Safety Saws are patented. Equipped with ball bearings throughout. General Electric motors and Ingersoll-Rand motors used. Any type of blade supplied as ordered. Cutting line is always in sight.



"CROWE SAFETY SAW" CUTS THE COST

Crowe Safety Saw is made in four sizes, giving you a wide range of efficiency.

For those jobs where electricity is not available, a Crowe Air-Driven Safety Saw has been built. It has all the excellent qualities of the electrically-driven saw.

Whatever your needs might be, if you cut lumber on the job, a Crowe Safety Saw will bring you exclusive advantages you will appreciate.

Officially approved for safety by industrial commissions, listed as standard by Underwriters' Laboratories, and recommended by insurance companies.

Cuts up to 6⅛ inches. Made in four sizes.

County school building in accordance with plans and specifications as follows:

1. On general construction.
2. On electric wiring.
3. On plumbing and sewerage.
4. On heating and ventilating.

The estimate cost of the building is $33,000.00. Plans and specifications may be obtained from the office of the Architects, Henkel & Hanson, of Connersville, Indiana, upon depositing $25.00, which amount will be returned in full, providing the plans are returned and a bona fide bid entered on or before April 16, 1929.

All bids must be in writing on form No. 96 and sealed and each bid shall be accompanied by a certified check of not less than 5% of said bid, made payable to K. Hord Gordon, Trustee, and will be held by said Trustee as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the Trustee and Advisory Board, if his bid or bids are accepted. The checks of those bidders who fail to be awarded the contract will be returned to them within 5 days after the letting.

Should the successful bidder, or bidders, fail to enter into such contract and execute such a surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the Marion School Township.

The right is expressly reserved to reject any and all bids and to use sufficient time to investigate the bids and qualifications of the bidders.

Plans are now on file at the office of the State Board of Accounts, office of the Township Trustee, and the office of the Architects, and engineers, Henkel & Hanson, of Connersville, Indiana.

Notice is hereby given that the undersigned Board of School Trustees of the School City of Kokomo, Indiana, will receive sealed bids at the office of the Board in the High School Building in Kokomo, Indiana, until 11 o'clock A. M. Tuesday, April 23, 1929, for the erection and completion of an addition to the present Meridian Grade School Building in accordance with the plans and specifications heretofore adopted therefor by the said Board.

Bids covering the General Construction work, the Heating and Ventilating work, and the Plumbing work shall be filed separately.

The estimated cost of the work is $70,000.00.

All bids must be in writing on Form No. 96, delivered sealed and must in every respect conform to the laws of the State of Indiana.

Each bid for General Construction shall be accompanied by a certified check for $2,000.00.

Each bid for Heating and Ventilating shall be accompanied by a certified check for $1,000.00.

Each bid for the Plumbing shall be accompanied by a certified check for $500.00.

The certified checks must be made payable to the Board of Trustees of the School City of Kokomo, Indiana, and will be held by them as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a bond for the full amount of his or their bid for the due performance thereof, approved by the said Board, if his or their bid is accepted. Checks of bidders who fail to be awarded a contract will be returned to them when the contracts have been awarded.

Should the bidder or bidders fail to enter into such a contract and execute such bond, then he or they shall forfeit the whole amount of the said certified check as liquidated damages, for the use and benefit of the proper fund of the School City of Kokomo, Indiana.

Copies of the plans and specifications may be obtained from the office of Harry Philip Bartlett, Architect, 1050 N. Delaware St., Indianapolis, Indiana, upon deposit of $25.00 for each set; said deposit will be returned to the bidder upon the safe return of the plans and specifications on or before the day and hour set for receiving bids.

The right is expressly reserved by the said Board to reject any or all bids and to use sufficient time to investigate the bids and qualifications of the bidders.

Vol. XI | INDIANAPOLIS, INDIANA, APRIL 13, 1929 | No. 3

"BIG 4" OF INDIANA BUILDING INDUSTRY ACTUATED BY DESIRE FOR BETTER STRUCTURES AND TO FACILITATE BUILDING OPERATIONS

Hence Developed The Present State Building Code

J. H. OWENS, Secretary Advisory Council
Administrative Building Council of Indiana

Few people, so it seems, gave any thought to a state building code, or a standard set of building regulations and requirements, that would be applicable throughout the state of Indiana and thus standardize building construction provisions, until the architects, contractors, engineers and organized labor definitely started action to that end some ten years ago.

At that time various localities all had their own individual building laws with no two alike in any section of the state. It occurred to the "Big Four" of the Indiana Building Industry that an attempt should be made to set up a minimum, uniform standard set of building regulations for the guidance of all throughout the state, and an effort was started back in 1920 for that purpose which culminated in 1923 in the passage of an act by the State Legislature for the establishing of a State Administrative Building Council whose duty it would be to compile standard building regulations and requirements.

One important and outstanding feature of it all is that those who sponsored the move had only an interest in better building and the welfare of the public. No one connected with the framing of the proposed state rules and requirements had any direct or indirect connection with the promotion or sale of any building materials whatsoever.

State Building Rules and Regulations

The law creating the Administrative Building Council and providing for its organization clearly states the purpose of the Act as the safeguarding of the people of Indiana so far as relates to safe and sanitary building construction.

The public is not accustomed to think of the Building Industry as a whole, as a unit, as a complete organization, but rather to classify those engaged in building as architects, contractors, engineers and craftsmen, each serving in a well understood capacity. To intelligently plan for safe and sanitary construction and obtain it, requires the co-operation of all these groups. Such a working co-operation is created by the Administrative Building Council of Indiana.

This was all planned when a bill creating the Council was prepared and submitted to the Legislature and the four organizations of the Building Industry stand committed now, as they did then, to the motive back of the program which was, and is, better building for the same cost or for a less cost. This striving for progress in the art of building was so intense that the Architects, Engineers, Contractors and Craftsmens' Organizations cheerfully co-operated and members were drafted to serve without compensation. This spirit of co-operation continues increasingly so that the public may well anticipate a higher standard of construction based on safety, sanitation and economy.

The motive back of the Administrative Building Council is safeguarded by the law and this is important as to the results to be secured. This Council is not a central bureau control of building in Indiana. Instead it is a helpful source of information for the local officials of the state upon whom rest the responsibility for the safeguarding of the people of their communities. The Rules and Regulations (minimum requirements) are provided so that safe and sanitary construction may be common practice. The individual or the community may go beyond such minimum requirements at their discretion. Arbitrary action, criticism and censure is not contemplated. Instead through the Building Council the citizens of Indiana have available the service of technical and practical men engaged in building. The policy of enforcement should be a spirit of co-operation which is hoped will be interpreted as a policy of impelling rather than one of compelling law observance, when only proven common-sense regulations are promulgated.

In the preparation of these Rules and Regulations the Building Council has had the advice and assistance of a large number of persons with wide practical experience in this field, as well as the recommendations of the National Building Code Committee of the U. S. Department of Commerce, and American Engineering Standards Committee. The Council has sought to make certain that its rules shall be both practical and reasonable. The provisions generally have the endorsements of responsible Architects and Builders.

The Building Council recommends that the cities of the state adopt the State Building Rules and Regulations as a city ordinance, with additional requirements as deemed necessary to meet local conditions, and to require building permits and proper inspection and thus prevent the construction of buildings which will endanger the lives of citizens and increase the possibility of disastrous general conflagration. It is therefore, clear that every individual, and every tax payer, whether a person, a firm or corporation, is or should be vitally interested from an economic standpoint, if for no other reason, in the problem of buildings and construction. It will take education to get the public to realize that it is extremely important that they follow along the lines of approved building methods. Sometimes, perhaps, it will require strenuous methods to enforce this idea on a recalcitrant member of society. But this should be done only when necessary. A property owner builds not for himself alone, but to a large extent for those about him. A man may have a right to hazard himself, but he has no right to hazard his neighbors.

The sole object of the State Building Council under its authority to adopt and promulgate Rules and Regulations per-

SELLING THE ARCHITECT

The Profession Must Act To Show Its True Function and Worth In Community Development

HERBERT FOLTZ, F. A. I. A.
Past President, Indiana Society of Architects

Publicity is a most elastic term variously employed by various interests in different ways for different purposes. Publicity to the merchant means one thing, to the Public Service Corporation another, to the politician something else, and to the professional man still another thing. Its chief end and aim, as generally employed, is the exploitation of something or somebody, therefore it runs the gamut from legitimate use to unrestricted abuse.

Until within recent years members of the architectural profession have given little heed to the question of publicity, either as individuals or as organized groups. The architect has been content to "point with pride" to his executed work as his best advertisement, which in many cases has been negative rather than positive in results, and to consider as of first and primary importance in any issue involving the attention of the public through ordinary publicity channels the question, "What will it profit me?" While this waiting, receptive attitude is perhaps dignified and "professional," it does not get anywhere in this modern age of aggressiveness and competition. The time has come when our profession should take an active rather than a passive interest in problems concerning civic betterment and in the creation in the public mind of a keener appreciation of the architect's function in the development of the community in which he lives and works.

The old theory of advertising which aimed solely at self-aggrandizement and increased profits has given way, in the march of progress, to a new and broader advertising program in the exploitation of all forms of commercial and organized activities. This newer method has proved beyond a doubt its economic value and efficiency in reaching the public and, aside from its individual appeal, is basically a plea of "each for all and all for each" so necessary to the creation and development of a proper community spirit.

The role of the critic is a thankless one and he does scant service to a cause or to himself who by his criticism merely destroys without creating, who blocks one way and points out no other. It will therefore be the writer's purpose in this article, with the foregoing preface, to indicate briefly ways and means that have been considered in other localities as a solution of this publicity problem and which may serve as pegs on which to hang a few conclusions of his own. The medium open to the architect for the cultivation of a more appreciative public mind towards his profession may, I think, be divided into three broad classes, i. e., Education, Public Service, and the Press.

As the question of Education would involve a complete readjustment of our educational systems, this medium becomes at once so complex as to make of it an important national issue and, as such, subject to more detailed discussion than is possible here. It is therefore with the two latter classes that we direct our attention as matters worthy of immediate consideration and susceptible of local application and solution.

Under the classification of Public Service can be grouped those activities, individual and collective, of the "lend-a-hand" variety which contemplate active participation in those national and community movements having for their aim and end the betterment of our social, political and economic conditions. The part heretofore played by the architect in these movements has been played in a distinctly minor key. He has been slow to learn that unselfish service in any community or national movements which tend towards better living, even if not directly associated with culture and refining influences in which he is most interested, nevertheless commands recognition of the profession as a factor in the life and activities of the community—a recognition to which we are by training and accomplishments entitled, but which does not come without seeking. To thus bring the profession at large into closer relation with the doing of things which count in the public eye, it will often be necessary to draw attention to the individual and this is perhaps one reason why the profession as a class had remained in the background in its participation in important civic movements. I believe the noteworthy achievements of any individual member of the profession, any honor conferred on him or important duty performed, even though it primarily adds to his prestige individually, should be encouraged as enhancing a general respect for the profession of which he is a member. Each succeeding honor to the individual when thus given wider acknowledgment by his profession will, naturally, greatly increase the recipient's obligation to his chosen calling and he will be more keen than ever to contribute his share to its further advancement. I would therefore urge, as one medium for greater publicity for and appreciation of our profession, more active interest and participation by its members in the civic problems with which we are continually confronted and for the solution of which others are taking credit. Let us not confine our endeavors so largely to and within ourselves but decide to play a larger part in the affairs of the city, state and nation and work individually and collectively in more varied manner for the cause of humanity.

Regarding the Press route to greater publicity, a survey of the periodical literature of the day indicates clearly that the amount of subject matter relating to Architecture in particular, or the broader phases of the subject in general, is very small indeed. It forms an insignificant portion of what the public reads. This condition is not the result of no demand,

(Contnued on Page 6, Col. 1)

SELLING THE ARCHITECT

(Continued from Page 5)

but rather arises out of the condition of no supply. Surely, a survey of the articles related to medicine, science in general, engineering and business, presented in a popular way, are no more vital and in most cases no more interesting than what could be produced from our own field. We should organize to supply this need.

A vast amount of material relating to the sciences and engineering finds its way to the public through reviews in periodicals and newspapers. They are the natural medium of distribution. It is not a difficult matter to call the attention of publishers to a pertinent subject, especially when it is well presented; whereas, to approach them with an individual article, or to simply inform them that the architects have taken such an action, has little weight or influence and rarely brings results.

It seems safe to assume that the degree to which we can attain in informing the public concerning our acts; in expressing to them what we stand for; in general, in awakening in the minds of the public a clearer understanding of the intimate relation between sound social and economic conditions and good Art and Architecture, will in very great measure depend upon the character of the material we furnish the public press.

In the consideration of this problem, we are immediately confronted with a few very practical questions regarding how the press can be used as an instrument of service. How can the press be induced to publish such material as will be of value; and also what shall be the nature of that material; and how can this be prepared?

Through the initiative of individuals, the number of newspapers presenting to their readers architectural material of very considerable value is gradually increasing. Other papers and magazines are each year devoting an increasing amount of space to the presentation of items related directly and indirectly to architecture. Notwithstanding this fact, it must be admitted that results are in almost direct proportion to the effort expended; that we have not reached the state where items relating merely to architecture as an art are sought for by the press.

This condition has been recognized by many in the profession and, as a remedy, they propose that material related to the subject of architecture and professional practice should be published and paid for as advertising. Experience has shown that, when pertinent material is prepared and presented to the press for publication, it is generally accepted and used. Experience also suggests that the dearth of material results from a lack of initiative rather than an unwillingness on the part of the press. If this be true, the problem is one which cannot be solved by the payment of advertising rates. As a matter of fact, papers and magazines are glad to publish pertinent, interesting material and it is hardly complimentary to their editors to assume that the mere payment of advertising rates will make copy either pertinent or "news."

If we look this problem squarely in the face, we find that it resolves itself into that of determining what is considered by the press to be both pertinent and news. Copy, whether it be news or advertising, must possess both of these qualities if it is to be of any value. If we can determine these two values, and at the same time produce the copy, the question of advertising eliminates itself.

In conclusion, in order to give my recommendations local application, I would summarize as follows:

1. Greater individual and collective activity in matters concerning civic betterment.

2. Wider publicity through the local press by means of news matter intelligently prepared and submitted as such.

3. Co-operation if possible with the Real Estate Board in the preparation of material for a weekly Real Estate and Building page in a local newspaper.

4. The signing of buildings worth while.

5. If advertising is considered or found necessary, this should be limited to a directory of the membership of the local Association and supplemented by a series of articles in sequence of an educational nature covering the various functions of the architect, the essentials of good service and the fundamentals of good architecture.

NEW ARCHITECTURAL BUSINESS COMBINATION FORMED

Two Fort Wayne Architects Join Hands

Two well known Fort Wayne architects, L. W. Larimore and Simpson Parkinson, have recently joined together. The new firm of Larimore and Parkinson is located is their new architectural quarters, 702--3-4 Tri-State Bank building, Fort Wayne. They are already quite busy with several of their projects under construction, being supervising architects on the half-million dollar radio factory for the Steinite Company, and are preparing plans for a new church building and several fine residences.

"BIG FOUR"

(Continued from Page 3)

taining to safety and sanitation, is to secure an administration of these Rules and Regulations that will at all times be in the interests of the taxpayers. The Rules lic and, as applied to building construcas adopted are ample to protect the pubtion, will give every honest person a square deal. The Council invites the co-operation of all Architects, Engineers, Craftsmen, Manufacturers, dealers and others, in fact all citizens in its endeavor to secure these results.

STEEL INSURES STRENGTH AND SECURITY

This 160'x360' addition to the machine shop of the Chrysler Corporation, Newcastle, Ind., is framed in structural steel, fabricated and erected by the Pan-American Bridge Co., of Newcastle.

Steel is Absolutely Safe

Every process in the making of steel, from its refinement in the open hearth furnace to its final passing through the rolls, is supervised and safeguarded with one purpose—to maintain uniform quality. Steel is worked and reworked, rolled and rolled again, until the metal has a uniform, fine-grained, tough texture.

Steel can have no hidden weaknesses. It is proved right in the making. The chemical properties of steel are more accurately fixed than are the properties of a medical prescription compounded by the most expert pharmacist.

Structural steel is safe because all its properties have been tested, and are known, before it goes into construction. Architects and engineers working with steel have the assurance of recognized and tested strength—uniform, consistent in every unit.

KOEHRING

Shovel!— Don't Nibble!

FOR instance — in a tough, hard bank, when a dipper that makes its own choice between hoist and crowd, would do nothing more than shave away, the Koehring operator puts all the power into crowd for a good dipper load, and then puts all the power into the hoist—SHOVEL instead of NIBBLE!

Koehring *independent crowd* and *independent hoist* mean that the *operator* is always master on the job.

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Shovel Capacities

Line of plate struck measure. Shock absorber on boom. Quickly convertible to pull shovel, crane or dragline.

No. 301—¾ yd. dipper on 16′ stick, standard. Other dippers on proportionate stick lengths. Wisconsin 4 cylinder gasoline engine, 5¼″x6½″, 1000 R. P. M.

No. 501—1¼ yd. dipper on 16′ stick, standard. Other dippers on proportionate stick lengths. Wisconsin 4 cylinder gasoline engine, 6″x7″, 1030 R. P. M.

No. 601—1½ yd. dipper on 16′ stick. Wisconsin 6 cylinder gasoline engine, 6″x7″, 760 R. P. M.

Sealed Proposals

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given by the undersigned that the Township Trustee of Spencer School Township, De Kalb County, Indiana, at the office of the Township Trustee in the Farmers and Merchants State Bank building in the town of Spencerville, in said township, will receive sealed proposals for repairing the school house in said town of Spencerville, and building an addition thereto, as set out in plans and specifications now on file in the office of the Township Trustee.

Said proposals will be opened and the contract awarded for said improvement on the 4th day of May, 1929. Bids will be received until 10 o'clock A. M. on said day.

Said improvement is located in Spencerville, De Kalb County, Indiana, on the grounds now used for school purposes in said town.

The estimated cost of said improvement is $25,500.00.

Bids will be received for the completion of said improvement in acordance with the plans and specifications in the office of the undersigned Trustee, and shall include all material and labor for said work.

Each bid shall be accompanied by a bond equal to double the amount of the bid filed for the work bid on and to be approved by the undersigned Trustee and shall be conditioned for the faithful performance of the work as provided by law. The sureties, if personal, shall be freeholders of the State of Indiana, and one of whom shall reside in De Kalb County, or said bidders shall be required to furnish a certified check as required by law, that he will enter into the contract if awarded to him. Said bidders will be required to furnish a non-collusion affidavit as required by law.

The undersigned reserves the right to reject any and all bids.

W. G. ERICK.

Trustee of Spencer School Township.

April 13.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

On April 29th, 1929, up to 11 A. M., the undersigned Trustee of Clinton Township, Putnam County, Indiana, together with the Advisory Board, will receive sealed proposals for the general construction, heating and ventilating, and plumbing, for a new addition to the school building and the repair of Center High School. Full particulars may be obtained of Joshua Hennon, architect, of Roachdale, Indiana, and from Bevington & Williams, heating engineers, of Indianapolis, and of the undersigned Trustee.

W. W. NEWGENT, Trustee.

Greencastle, Indiana.

R. F. D. No. 1.

April 13, 1929.

NOTICE OF SALE OF SCHOOL BONDS

Notice is hereby given by the undersigned School Trustee and Advisory Board of Clinton School Township, Putnam County, State of Indiana, that said township officials will create and incur an indebtedness of the said Clinton School Township in the aggregate amount of Seventeen Thousand ($17,000.00) Dollars, by issuing the bonds of said Clinton School Township in the aggregate amount of Seventeen Thousand ($17,000.00) Dollars.

Said bonds shall be in denominations of Five Hundred ($500.00) Dollars each; and shall bear interest at the rate of four and three-fourths per cent (4¾%) per annum, and such interest shall be payable semi-annually on the first day of January and the first day of July of each year, except the first installment of interest which has accumulated from the date of the bonds to July 1st, 1930, shall be paid on July 1st, 1930, and the said indebtedness so to be created and the said bonds so to be issued shall become due and payable as follows:

$1,000, July 1, 1930	$1,000, Jan. 1, 1935
$1,000, Jan. 1, 1931	$1,000, July 1, 1935
$1,000, July 1, 1931	$1,000, Jan. 1, 1936
$1,000, Jan. 1, 1932	$1,000, July 1, 1936
$1,000, July 1, 1932	$1,000, Jan. 1, 1937
$1,000, Jan. 1, 1933	$1,000, July 1, 1937
$1,000, July 1, 1933	$1,000, Jan. 1, 1938
$1,000, Jan. 1, 1934	$1,000, July 1, 1938
$1,000, July 1, 1934	

All of said bonds shall bear date of April 15th, 1929.

The money obtained as a loan upon said bonds so to be issued will be used for the purchase of ground and the construction of a new addition to the present school building and the repair of the present school building at what is known now as "Center High School" in said township.

There now exists an outstanding bonded indebtedness against said Clinton School Township in the aggregate sum of One Thousand ($1,000.00) Dollars; and the net assessed valuation of property in said township is the sum of Nine Hundred Eighty-Four Thousand, Seven Hundred Fifteen ($984,715.00) Dollars.

Said bonds together with a transcript of the record of said bond issue will be ready for delivery on the 29th day of April, 1929.

Said bonds will be offered for sale at the office of the undersigned trustee at his home in Clinton Township, Putnam County, Indiana, on Monday, the 29th day of April, 1929, at 10 o'clock A. M. Said bonds will be sold for not less than par with accrued interest thereon to date of sale.

Witness our hands this 6th day of April, 1929.

CLAY McGILL,
Z. B. BURKETT,
W. S. BOCK,
Advisory Board of Clinton School Township.

W. W. NEWGENT,
Trustee.

State of Indiana,
County of Marion, ss.

Before me, a notary in and for the State and county aforesaid, personally appeared Donald Campbell, who, having been duly sworn according to law, deposes and says that he is the publisher (State whether editor, publisher, business manager, or owner.) of the Indiana Construction Recorder (Insert title of publication.) and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of— Post office address—
Publisher, Donald Campbell, 313 East Market St., Indianapolis, Ind.
Editor, Donald Campbell, 313 East Market St., Indianapolis, Ind.
Managing Editor, None.
Business Managers, Donald Campbell, 313 East Market St., Indianapolis, Ind.

2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.)

Donald Campbell, 313 East Market St., Indianapapolis, Ind.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is... (This information is required from daily publications only.)

DONALD CAMPBELL.

Tested-for-Strength Stairways

Woodbridge PresTeel Stairways are the only stairways whose design and manufacture is entirely based upon engineering standards. Every gauge of steel used has been selected after exhaustive tests under impartial engineering supervision. Thus a strong and sturdy construction is assured. The wear and tear of years have been taken into consideration in designing and constructing Woodbridge PresTeel Tested-for-Strength Stairways.

Woodbridge Features

1. Woodbridge stairways go up with the skeleton.
2. They provide immediate service between floors to all of the trades.
3. Patented treads and risers eliminate all of the faults of ordinary stairway construction.
4. Nosings constructed—and guaranteed—not to work away from cement or other fill.
5. Concealed hip angles make possible clean and attractive appearing soffits requiring no plaster.
6. Every railing and spindle is rigid.
7. Factory-assembled, knocked down and shipped marked for easy erection.
8. Adaptable to office, hotel, warehouse, factory, school, church, hospital or public building construction.

A special spiral design, 20-B, is a great improvement over the old cast iron type of spiral, and is suitable for single flights or 100-ft. stacks.

All Woodbridge PresTeel Tested-for-Strength Stairways are placed on a guarantee that has no reservations of any kind.

Vol. XI INDIANAPOLIS, INDIANA, APRIL 20, 1929 No. 4

INDIANA BUILDING CONGRESS ADOPTS AN EXPANSIVE STATE-WIDE OPERATING POLICY

New Order For Districting The State To Go Into Effect and Become Operative At Once

Having effected a well rounded organization, distinctly representative of the various groups engaged in the building construction industry, members of the Indiana Building Congress have decided to carry the organization to all sections of the state for the uplift and advancement of the building industry and building conditions.

This was the decision made at a recent business meeting of the State Building Congress held at Indianapolis, at which gathering delegates were present representing the architects, building trades, building material, supply dealers, engineers, general building contractors, and mechanical and sub-contractors. The state professional, contractural, and building business organizations represented at the meeting were:

Indiana Society of Architects, Indiana Chapter American Institute of Architects, Associated Building Contractors of Indiana, Indiana Engineering Society, Indiana Builders' Supply Association, Indiana Association of Electrigists, Indiana Society of Sanitary Engineers, Indiana State Building Trades Council, Indiana State Council of Carpenters, Indiana State Association of Plumbers and Steamfitters, Indiana State Masonry Conference, Indiana Master Painters and Decorators' Association.

The meeting, held at the Lincoln Hotel, was called to order by President Merritt Harrison, who gave a brief outline of the activities of the Congress for the past year, stressing particularly the legislative program sponsored by the Congress in the last General Assembly. Mr. Harrison said that while all had not been accomplished that was set out to be, yet the Congress had made a very creditable showing and had proven its merits as an organization and predicted that the continuation of the activities of the Congress would be a real benefit to the building industry in Indiana.

Charles W. Kern, vice president, concurred in Mr. Harrison's remarks and said his experience in organization work, which had been over a period of years, was that when an organization had a real principle upon which it was based that organization invariably succeeded regardless of those that may not concur in its activities. Mr. Kern further stated that while he may not agree on all of the policies sponsored by an organization, yet if those policies were supported by the majority then he believed the policies should be adherred to by its members, in fact, that had always been his attitude in the past and would continue to be so in the future.

Attention was directed to the proposed Building Trade Show that had been scheduled for May at the State Fair Grounds, Indianapolis and was sponsored by the State Building Congress. R. B. Crane, director of exhibits, reported that due to the legislative activities of the Congress, there had not been an opportunity to concentrate on the show and therefore recommended that the exhibition be postponed to the week of October 21-26, inclusive. This suggestion was adopted unanimously.

As a ways and means to extend the function and efficiency of the Congress throughout the state, and co-ordinate the effort to better the industry, a plan for districting the entire state was decided upon after serious consideration. This plan, for the promotion of the general welfare of the Indiana Building Industry and the interests of those connected therein, is as follows:

The state shall be divided into eleven districts after this manner, each to be made up thus:

District No. 1—Jasper, Lake, Newton and Porter Counties.

District No. 2—Elkhart, Fulton, Kosciusko, Laporte, Marshall, Pulaski, St. Joseph and Starke Counties.

District No. 3—Adams, Allen, De Kalb, Huntington, La Grange, Noble, Steuben, Wells and Whitley Counties.

District No. 4—Benton, Boone, Carroll, Clinton, Fountain, Montgomery, Tippecanoe, Warren and White Counties.

District No. 5—Cass, Grant, Hamilton, Howard, Madison, Miami, Tipton and Wabash Counties.

District No. 6—Blackford, Delaware, Henry, Jay, Randolph and Wayne Counties.

District No. 7—Clay, Greene, Owen, Parke, Putnam, Sullivan, Vermillion and Vigo Counties.

District No. 8—Hancock, Hendricks, Johnson, Marion, Morgan and Shelby Counties.

District No. 9—Davies, Dubois, Gibson, Knox, Perry, Pike, Posey, Spencer, Vanderburg and Warrick Counties.

District No. 10—Bartholomew, Brown, Clark, Crawford, Floyd, Harrison, Jackson, Lawrence, Monroe, Orange, Scott and Washington Counties.

District No. 11—Dearborn, Decatur, Fayette, Franklin, Jefferson, Jennings, Ohio, Ripley, Rush, Switzerland and Union Counties.

Such a line-up will include one hundred and twelve cities and under the proposed working arrangements would keep the Congress in direct touch with the building situation throughout the state and make the body a valuable agency for the interchange of ideas and information.

The proposed plan provides that each district shall be in charge of a chairman, appointed by the president of the Indiana Building Congress, with the approval of the Board of Governors, and shall serve until their successors are duly appointed and installed.

Each district shall be governed by a Board, consisting of the chairman and one member from each constituent group representing the Indiana Building Congress, said members to be appointed by the District Chairman, who shall be chairman of the Board. Said Board shall be known as

BUILDING FRIENDS

A New Mission, Ages Old, for the Indiana Society

GEO. W. ALLEN, President
Indiana Society of Architects

Man, for ages, lived under the shelter of the trees and in the clefts of the rocks. The first instinct of man was to find a place of shelter when night overtook him or in time of danger to seek a place for protection. But in the van of civilization, the abode of the rocks and trees disappeared and he began to want a better place to live and he saw the need of companionship and friends: first perhaps to help him in time of danger to assist him in warding off the enemy.

But as time went on he felt more and more the need of real friendship, so this spirit has grown until today we have great organizations that are based upon brotherly love and friendship.

Nothing worth while in this life can be accomplished without friends and their cooperation. The making of friends is one of the finest things in life. If I were a young man starting out in life, the first thing I would do would be to build friends and I would make as many true friends as my ability could, and I would do my best to keep them all.

I would hang over my desk this motto, "BUILD FRIENDS."

It is quite apparent today that opportunity to make friends is plentiful. With the two fine architectural organizations in the state, Indiana Society of Architects and the Chapter of the American Institute to work for, we have the greatest opportunity in the history of Indiana to make friends. So let us begin to cultivate that foresight to sense the importance of friendship among architects.

Not to do this will be to have failed in a very pleasant and profitable advantage in life. So with this idea in mind I want to suggest to every architect in Indiana to not only be an architect but a builder also, a "BUILDER OF FRIENDS."

Build for a bigger Indiana Society of Architects and a bigger list of friends for your office. Let it be our daily task to make friends. Let's not fritter away our free time, but devote at least a part of it to making and keeping our friends, thereby making greater possibilities for the Society and ourselves. I don't know as the Society has ever had a slogan or not, but the slogan this year will be "BUILD FRIENDS."

Build them first for the Society and then we personally will have made friends. Let us show the architects outside of our organization the real value we have in I. S. A. Use every opportunity to sell the Society to them, make them feel proud to join us, not only as a member but as a builder for the Society.

Let every member stand ready to launch out on this your golden opportunity of making friends for the Society.

At the end of the year, if we have done nothing more than the building of a stronger friendship among the architects in Indiana I will feel we will have done a fine piece of work, something that will live on after other things have been forgotten.

I want the Regional Meetings over the state this year to be the means of cementing a lasting friendship among the Architects and their draftsmen, whom we hope will attend these meetings. If they do not attend, then our opportunity is lost.

As it was, at Fort Wayne last month when our first meeting was held, only one architect attended that meeting.

These meetings are held to bring together the architects and draftsmen for a common interest.

Once more, I stress this thought—

Building Friends

Friends are the finest things in life these days,
The road to it is not smothered or hidden away.
You just win his friendship with kind deeds,
For that seems to be about all he needs.
He will store your kindness in his treasure chest
Because he knows your friendship has stood the test.

Friendship is the greatest thing in life,
To gain it—let it be our daily strife.
Let's use every means that's fair,
So our friendship they too may share,
By adding our smiles for all we are worth,
For I know my friends are the salt of the earth.

The building of friends ought to be our our ambition,
And should be Indiana Society's mission.
This year should be our endeavor,
To add new members and artisans clever.
We should use courage, patience and skill,
To the building of friends—Let's say: "WE WILL."

INDIANA BUILDING CONGRESS

(Continued from Page 5)

the Indiana Building Congress District Board.

All matters of interest affecting the building industry or its members in any district brought up by the members of any constituent group shall be referred to the District Chairman, who shall investigate, and if in his judgment found necessary, call a part, or the whole District Board into session for consideration and disposal of the matters brought before it, and a copy of the proceedings shall be forwarded to the office of the Indiana Building Congress.

It shall be the duty of the District Boards to organize their respective districts, and for the purpose of organizing to hold meetings at such places in each district as deemed necessary by the Board. These meetings shall be arranged for by the District Board with the co-operation and assistance of the Indiana Building Congress. Such meetings shall be presided over by the District Chairman.

The several District Chairmen shall act in the capacity of an Advisory Committee to the Board of Governors of the Indiana Building Congress, and shall meet with the Board of Governors from time to time and submit reports of the activities of their respective Districts.

Following the above deliberations, the annual election of the Board of Governors for the ensuing year resulted as follows, the men named representing the various groups composing the Congress:

Merritt Harrison, Architects; Earl Carter, Engineers; Wm. Smith, General Building Contractors; L. J. Granger, Mechanical and Sub-contractors; Charles W. Kern, Building Trades; Frank P. McNutt, Building Supplies.

The new Board of Governors then went into session and elected these officers of the Congress for the ensuing year:

President, Merritt Harrison; vice president, Chas. W. Kern; treasurer, William Smith; secretary, J. H. Owens.

Just preceding adjournment President Harrison named the following men to act as District Chairmen for the new districting plan:

District No. 1—Henry Gabler, 436 Sumner street, Hammond, Ind.

District No. 2—Walter Fassnacht, 742 South Michigan street, South Bend, Ind.

District No. 3—Albert Weinmann, 807 West Creighton avenue, Fort Wayne, Ind.

District No. 4—Ralph Brassie, 639 Main street, Lafayette, Ind.

District No. 5—Chas. Shaffer, 21 W. 8th street, Anderson, Ind.

District No. 6—Ed. Justice, Domestic Coal and Supply Co., Muncie, Ind.

District No. 7—Warren D. Miller, 819 West Ohio street, Terre Haute, Ind.

District No. 8—Fermor S. Cannon, 21 Virginia avenue, Indianapolis, Ind.

District No. 9—Harry Boyle, 405 Furniture Bldg., Evansville, Ind.

District No. 10—Geo. S. Hottle, 2413 Shrader avenue, New Albany, Ind.

District No. 11—Chas. Moneyhon, Connersville Lumber Co., Connersville, Ind.

BUILDING OPERATIONS APPARENTLY GAINING MOMENTUM

Most of the Country Shows An Awakening Activity

Indiana, in step with other states about the country, showed an improvement in building construction operations for the month of March this year, as compared with the corresponding period in 1928, and also February this year. Thirteen of her leading cities issued new building permits for a total estimated valuation of $5,369,588, a very good showing for this season of the year. Twelve of those cities, Elkhart being omitted because the March, 1928, figures were not sent in, turned in a $5,193,403 volume of business for March, 1929, which was an 18.5% gain over the returns for the corresponding period a year ago.

Indiana, with her total, took tenth place among the foremost building states of the country, and Indianapolis ranked twenty-fourth in the list of cities reporting the best volumes of new building business.

The official report for the country on building activity, made by S. W. Straus & Co., building financiers, and taken from the returns sent in from 582 cities and towns, shows a 60% gain for March over the volume reported for February this year.

The normal gain from February to March is 57%, thus tending to indicate an upward trend which should soon manifest itself in actual building activities.

In the twenty-five cities of the country showing the greatest amount of building the total permits issued in March was $287,627,874, compared with the February total of $174,128,635, a gain of 64%.

Comparison of the figures for March with those of the same month last year gives a similar indication of an upward trend in building. In the twenty-five leading cities the gain over March, 1928, was 18%, and over March, 1927, 21%. In 350 cities the gain was 10%. Due to local conditions in some sections of the country, however, the entire list of 582 centers revealed a gain over March, 1928, of only 2%, although it is to be borne in mind that last March the same cities reported a loss of 4% from the same month in 1927, and of 8% from March, 1926. Also, it may be pointed out that monthly building permit records, as compared with the same months of the previous year, have shown a constant downward trend since July, 1928. These monthly losses were as follows: February, 1929, 20%; January, 11%; December, 1928, 11% November, 14%; October, 1%; September, 10%, and August, 11%.

Conditions in Leading Cities

It is a matter worthy of note that of the twenty-five cities which are leading the country in building activities at this time, fourteen showed gains over March, 1928. Increases of impressive proportions were shown in Boston, Washington, Los Angeles, Akron, Providence, Denver, Oklahoma City, New Orleans and Indianapolis.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Strictly modern in every respect is this steel-framed garage of the Clupper Sales Co., Wabash, Ind. Steel fabricated and erected by Rochester Bridge Co., Rochester, Ind.

IGHSPEED IN CONSTRUCTION

A building that can be completed quickly brings earlier returns on invested capital—saves interest charges that grow big with delay.

If you have marveled at the speed with which a tall building rises, you know how swiftly it is possible to build with steel.

Sealed Proposals

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is here given that the School City of Shelbyville, Indiana, Shelby County, and the Board of Trustees thereof, will receive sealed bids at the office of the said Board of Trustees, located in the Departmental Building, Shelbyville, Indiana, until 10 o'clock A. M. Wednesday, May 8, 1929, at which time and place same will be opened, read and considered for the construction of Alteration of and Addition to a Grade School Building, including heating, ventilating, plumbing, electric wiring, and signal system and lighting fixtures, for use of said school city and located in said city and all by and according to plans and specifications as provided therefor as further approved by the State Board of Health and State Board of Accounts. Estimated cost of building, $70,000.00.

The plans and specifications are on file for the inspection of bidders at the office of the Board of School Trustees, Shelbyville, Indiana, and at the office of Leonard, Wolf and Hoagland, Architects, 309 Peoples Life Building, Frankfort, Indiana, and 1307 New City Trust Building, Indianapolis. Copies are available to bidders for use at their own offices upon deposit with the Architects or Trustees of $25.00 to guarantee safe return of same on or before opening of bids. If plans are not returned on date of letting, deposit shall be forfeited. Bidders must familiarize themselves with such plans and specifications before bidding and no departure from the same will be considered.

Bidders on submission of bids will submit same as follows:

1. On general contract.
2. On heating and ventilating.
3. On plumbing.
4. On heating, ventilating and plumbing combined.
5. On electric wiring and signal system and lighting fixtures.

In this way the bidder only being required to submit his bid for such portion of the total work as he may desire.

All bids shall be accompanied by the certified check of the bidder in sum equal to at least 5% of his gross bid or bids, conditional upon his entering into his written contract with sufficient and approved surety if he is the successful bidder, according to proposal. Checks to be made payable to Treasurer of the Board.

All bids and proposals shall be upon the forms prescribed by the State Board of Accounts. Unless bids are accompanied by certified checks as above and upon forms as above, no attention will be given same.

The successful bidder will be required to enter into his written contract and also deliver his bond from approved surety company to the School City of Shelbyville, Indiana, in a sum equal to the full amount of contract as usually conditioned. The successful bidder will be required by the terms of his contract to enter into the active prosecution of his work immediately and complete said work at the time mentioned in general conditions of the specifications. The Board of Trustees for the School City reserve the right to reject any and all bids without giving any reason therefor.

afternoon of Saturday, the 11th day of May, 1929. Said contract will be let for the furnishing of all material and labor necessary to erect and fully complete and construct certain additions, improvements and extensions to the present consolidated grade and high school building in said Oak Grove Township, and situated on Township lands at Oxford, Indiana, in strict accordance with the plans and specifications therefor, and under the directions and supervision of the Architect-Engineer, Walter Scholer, which plans and specifications are on file in the office of the undersigned Trustee, and in the office of the said Architect-Engineer at 301 Painters' and Decorators' Building, at Lafayette, Indiana, and are open for inspection of all persons and contractors concerned. Said contract will be divided into three (3) classes: First, general contract; second, heating and plumbing and ventilating; third, electric wiring and fixtures. Each bid to be separate, enclosed in a separate envelope and marked with the name of the bidder and class of bid enclosed.

All bids shall be accompanied by a certified check in the sum and amount equal to three (3) per cent of the amount bid for said contract; said check to be payable to R. B. Ladd, Township Trustee, and is given to insure that the bidder, after award of the contract, will enter into a written contract with said Trustee to complete said contract according to the plans and specifications of that class of the contract awarded, and that said bidder will furnish a bond in a sum equal to the contract price, payable to said Trustee, with a surety company as surety; said bond to be to the approval of said Trustee, and conditioned that said contractor shall faithfully perform and execute said contract made by him in accordance with said plans and specifications, and under the direction, control and supervision of said Architect, and to the acceptance of said Trustee, and as otherwise provided for by law for public contracts.

Upon failure of said successful bidder to enter into said contract and give bond within fifteen (15) days after the notice of the award, said sum fixed in said certified check shall be forfeited as liquidated damages to said Township.

All bids shall be in plain terms and upon forms prescribed by the State Board of Accounts of the State of Indiana, and may be had upon application to said Trustee or Architect above named.

Said Trustee and Advisory Board reserves the right to reject any and all bids and to take reasonable time for making a decision in awarding said contract or contracts.

COLLEGE BUILDINGS
INSTRUCTIONS TO BIDDERS

Sealed proposals to the Board of Trustees of Purdue University for the following items to be constructed on the grounds of Purdue University, West Lafayette, Indiana, will be received at the office of the Controller, Purdue University, West Lafayette, Indiana, up to 10:00 a. m., Tuesday, May 14th, 1929, at which time they will be publicly opened and read, namely:

Unit No. 1, New Mechanical Building.
New Pharmacy Building.
Unit No. 1, New Chemistry Building.
Additions to the Underground Heating Tunnels.

Steam Piping in the above additions to Heating Tunnels.

Steam Piping for machinery in New Mechanical Building.

Plans and specifications for the building named may be obtained from Walter Scholer, architect, 301 Painters' and Decorators' Building, Lafayette, Indiana, and plans and specifications for the additions to underground heating tunnel and piping may be obtained from Mr. C. D. Bushnell, Superintendent of Physical Plant, Purdue University, West Lafayette, Indiana. Plans and specifications on these projects are on file with the State Board of Accounts, Statehouse, Indianapolis, Indiana; Dodge Reports, 173 W. Madison St., Chicago, Ill.; and The Indiana Construction Recorder, 312 East Market St., Indianapolis, Indiana.

Separate proposals will be submitted on each of the following items on each building:

(a) General construction.
(b) Plumbing.
(c) Heating and ventilating.
(d) Electrical wiring.
(e) Laboratory equipment for chemistry and pharmacy.
(f) Steam piping for Machinery in New Mechanical Building.

Proposals will be submitted on form 96 as prescribed by the State Board of Accounts and in accordance with the specifications, and a certified check to the amount of 3 per cent of the bid or bids will be submitted with thesh proposals.

The Board of Trustees reserves the right to reject any or all bids.

R. B. STEWART, Controller,
Purdue University.

"BID PEDDLING" FORCED INTO THE LIMELIGHT

General Contractors Carry Plaint to the Government When Their Toes Are Trampled

Shopping for, or the peddling of bids, amongst sub-contractors by general contractors engaged in governmental building construction work has aroused the ire of the National Association of Builders Exchanges to the extent that a formal complaint by that body has been filed with the Federal Trade Commission in an effort to have such methods stopped.

The National Association of Builders Exchanges contends that this peddling practice has a demoralizing effect on the building construction industry and that a means should be developed to end it.

At least one alleged case of "bid peddling" by a general contractor awarded a contract for one of the huge structures included in the Federal building program in Washington is the basis of the complaint which the national association cites as an "unfair trade practice" in the appeal to the Federal Trade Commission for an investigation.

While explaining that there is nothing in the law to prevent a general contractor awarded a Government job from later seeking a lower bid from a subcontractor than the one he made, Earl P. Stokes, executive secretary of the National Association of Builders Exchanges, charges that such practice "brings into the picture the cut-rate subcontractor who is willing to do anything to get a job, even though he takes it at a loss."

"This type of bidder," says Mr. Stokes, "is frequently incompetent, poorly financed, using unfair methods, shoddy materials, and oherwise is objectionable."

Appealed to McCarl

The complaint is made at the instance of the Builders and Manufacturers Exchange of the district, an organization of prominent local contractors and subcontractors, which is affiliated with the national organization.

Decision to take the complaint to the Federal Trade Commission was reached after the national association had laid the matter before Controller General McCarl, of the Treasury Department and the office of James A. Wetmore, supervising architect of the Treasury Department. Both General McCarl and Carl T. Schuneman, Assistant Secretary of the Treasury, who replied for Mr. Wetmore, declined to initiate steps designed to regulate the selection of the subcontractor as suggested by the national exchange. Government inspectors are employed to see that Federal buildings are erected according to specifications, general contractors being held responsible.

General McCarl, in his reply, stated that while his office was interested in economy and efficiency in the conduct of the Government's business and in securing observance of the terms of appropriations made by Congress, "there appears nothing requiring action by this office to protect the interests of the United States" on the basis of the complaint by the exchange.

In correspondence with the supervising architect, the exchange, through Secretary Stokes, stated that a committee studying the matter requested the following plan:

"That the supervising architect write into the specifications of all proposed Federal construction jobs a notice requiring that all general contractors when submitting bids shall include a list of the subcontractors whose figures were used in making up the general contractor's bid and that these names be read immediately following the announcement of the price of the successful bidder." Provision should also be made, it was added, whereby the supervising architect could reject the bid of any subcontractor on the list submitted, if proper proof was submitted showing that the particular subcontractor was not a reliable or financially responsible operator.

Doubts Success of Regulation

To this suggestion, Mr. Schuneman replied that "while the department appreciates the motives that actuate subcontractors in their endeavor to secure some regulations which will do away with the practice of 'bid shopping' followed by some general contractors, it does not believe that an effort to remedy this matter by regulation would prove satisfactory."

Mr. Schuneman added that at one time the Treasury required contractors to submit for approval the names of their principal subcontractors, not before but after the award of the contract, and that "it sometimes happened that these subcontractors proved unsatisfactory and sometimes developed a disposition on the part of the general contractor to evade responsibility therefor, because of the approval which the department had given such subcontractors.

"Furthermore," replied Mr. Schuneman, "delay was occasioned in some instances due to the necessity of investigating the standing and ability of subcontractors. Altogether the experience of the department led to the adoption of the principle that the contractor must be held responsible for the acts of his subcontractors, and it seemed unfair to so hold the contractor and at the same time limit his freedom of action in selecting his subcontractors."

The custom to which the members of the Builders Exchanges object is by no means new, in fact it has been a thorn in the side of the building industry for years and has been debated pro and con by contractors and their associations the country over. It is one of the practices that has kept contractors apart and made organization effort so hard to perfect. It all harks back to the keen competitive nature of the contractural business, a situation that drives some contractors to resort to peddling in order to "come clean" on figures submitted under the urge "to land" a much desired job.

It is interesting to note that this matter has been called to the attention of governmental authorities, but it is doubtful if such action will bring relief, rather, it seems that the remedy lies with the contractors themselves, for, when the general contractors stick by their sub-bidders and these in turn stick to their bids and refuse to "whittle," there, and there alone, will be the solution.

Information of Value about Concrete Reinforcing Steel

WHATEVER your problems in reinforced concrete may be, you can now quickly get practical information and help that will save you time and money.

This is one of the functions of the Concrete Reinforcing Steel Institute, an organization of fabricators maintaining eighty-seven warehouses in thirty-seven leading cities to insure prompt delivery on short notice.

The Institute was formed to advance the use of reinforced concrete:

By concerted effort to maintain highest standards of quality and service in the supply of essential material.

By co-operation with Architects, Engineers and Contractors in the collection and dissemination of information on progress in design and methods of construction.

ARCHITECT TO AGAIN HEAD INDIANAPOLIS BUILDING CONGRESS

Robert Frost Daggett Re-elected President at Annual Meeting

Close to a hundred building construction men turned out to the annual meeting of Indianapolis Building Congress, the evening of April 24, at the Lincoln Hotel, an affair that was ushered in with a 6:15 p. m. dinner to be followed by an enthusiastic and interesting business session later. Those present represented practically all the various elements that go to make up the industry, including architects, general contractors, subcontractors, organized labor, material supply men and bankers.

The feature of the evening was an admirable address by L. K. Comstock, New York City, who spoke on "Commercial Arbitration, and Its Economic Advantage to the Building Industry."

President Robert Frost Daggett, who presided, reviewed the work done by the Congress the past year.

He recounted the work done in the matter of the Recognition of Craftsmanship, something new in Indianapolis, and assured his auditors this practice would do much to develop building trades craftsmanship in the city in the future.

Turning to another phase of the Congress' endeavor, he said:

"One of our most important activities is that of the Apprenticeship training. Fermor Cannon, the Chairman of the Apprenticeship Committee, has been most active in this connection and his report is a very thorough one. I recently visited the Carpentry class at Technical High School and saw the boys at work, keen, alert, interested in their craft. This has been a real achievement on the part of Mr. Cannon and the members of the Joint Committee on Carpentry Apprenticeship. In less than three months' time the carpentry apprentice trade was organized and training made possible. We are hoping to have a number of classes in other trades ready for instruction at the beginning of the next school term in October."

Commenting on activities along legislative lines, President Daggett called attention to the fact that that committee had worked very hard during the last session of the Legislature in the effort to have the Drafts State Arbitration Act, Senate Bill No. 24, which was sponsored by the American Arbitration Association passed. It also cooperated with the Indiana Building Congress on the passage of an architect's license law, a contractor's registration law, and an inspection bill. The architect's license law went over and although Senate Bill No. 24 was not brought down by the Speaker.

He assured those present that the Legislative Committee is now a permanent committee of the Congress whose duty it is to assist in all legislative matters affecting the building industry and to cooperate with other agencies on legislation affecting building and builders.

As for other committees he said in part:

"The Publicity Committee has been constantly and effectively active in the publication of reports of the work of the Congress in the newspapers and trade journals throughout the country and in the securing of radio time for the broadcasting of our apprenticeship and craftsmanship work.

"You are all familiar with the activity of the Codes Committee. The wall hangers, I am sure, are on display in your offices and I hope that you are living up to the Resolution. This Committee is at work on a Code of Ethics for the Building Industry which I am told will be completed shortly and submitted to you for suggested amendment.

"The Arbitration Committee has selected a panel of some 35 representatives of the building industry in Indianapolis to act as arbitrators and with the cooperation of the American Arbitration Association has formulated Rules and Regulations for the conduct of an arbitration court in the Congress. The necessary legal forms will be ready and the court, I am told, will be in operation by July 1st of this year.

"The Safety Committee is at work on a Safety Code for the Building Industry which, when completed, will be disseminated to the members. The work of this committee will be better understood and have a greater value as we realize in the industry that there is a need for greater safety for workmen.

"The Committee on Seasonal Operations made a study of seasonal work in Indianapolis and their report has received wide publication in the local papers, national trade journals and newspapers. This report was taken by many of the newspapers as an example of the situation with regard to year round construction in the Middle West.

"I have recently appointed a Committee on Credits. This Committee is at work on a plan, the details of which you will hear about later on.

"The work of all of the above committees derives its chief source of strength from one central committee, the Membership Committee. The work of selling any organization in its first year of existence is exceedingly difficult. This latter Committee has been most active and I believe you will all agree with me that the members have done a splendid job in the new members added, the compilation of the roster and the small shrinkage in the original membership list."

The annual election of officers resulted in the re-election of Mr. Daggett as President, and the naming of these other men: First Vice President, G. M. Sanborn; Second Vice President, S. P. Meadows; Third Vice President, W. L. Bridges; Treasurer, E. J. Wuensch; Secretary, Carl Spickelmier.

Continental Bank Bldg. Brick, concrete construction.

***Grade School Building** (addition): $70,000.00, 2-stys. and bas., Meridian School, Kokomo. Archt., H. Philip Bartlett, 1050 North Delaware street, Indianapolis. Mech. STEEL INSURES STRENGTH AND SECURITY

The steel frame typifies the strength of the Citizens' National Bank, of Bedford, Ind. Leslie Colvin, Indianapolis, contractor; McGuire & Shook, Indianapolis, architects. Steel fabricated by Bedford Foundry & Machine Co., Bedford, Ind.

STEEL Construction means *Responsible* Construction

Steel mills and fabricating plants in Indiana alone represent the investment of millions of dollars in buildings and equipment. These great industrial organizations, because of the colossal nature of their business and their tremendous investments, must be responsible for uniform high quality, the most approved standards of manufacturing practice, and the proper design and application of their product.

Steel construction has behind it the established responsibility of the manufacturer, the fabricator, the architect, the engineer and the contractor—all working with material that has consistent known properties. Steel construction, therefore, is responsible construction.

KOEHRING WEIGH MIX

MATERIALS and water *proportioned by weight*—mixing period accurately timed—the Koehring *Weigh Mix* is the accurate producer of specification concrete!

It's a standard Heavy Duty Koehring mixer with weighing batch hopper and water tank mounted on an auxiliary frame. All operations are controlled from platform.

All aggregate weighed in one hopper—any number of grades weighable without extra equipment. Water weighed on same beam!

Fast discharging *vibrating* hopper permits mixer to operate at full capacity, and self clearing is so accurate that weighing scale always returns to balance. Absolute, easy, one-man operation!

—and of course the Koehring remixing action makes its own contribution to uniform, dominant strength concrete.

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Sealed Proposals

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given that sealed proposals will be received by the Trustees of Oak Grove School Township and the Advisory Board of Oak Grove School Township of Benton County, Indiana, at the Township Trustee's office in the consolidated grade and high school building, at Oxford in Oak Grove Township, Benton County, Indiana, until two o'clock in the

afternoon of Saturday, the 11th day of May, 1929. Said contract will be let for the furnishing of all material and labor necessary to erect and fully complete and construct certain additions, improvements and extensions to the present consolidated grade and high school building in said Oak Grove Township, and situated on Township lands at Oxford, Indiana, in strict accordance with the plans and specifications therefor, and under the directions and supervision of the Architect-Engineer, Walter Scholer, which plans and specifications are on file in the office of the undersigned Trustee, and in the office of the said Architect-Engineer at 301 Painters' and Decorators' Building, at Lafayette, Indiana, and are open for inspection of all persons and contractors concerned. Said contract will be divided into three (3) classes: First, general contract; second, heating and plumbing and ventilating; third, electric wiring and fixtures. Each bid to be separate, enclosed in a separate envelope and marked with the name of the bidder and class of bid enclosed.

All bids shall be accompanied by a certified check in the sum and amount equal to three (3) per cent of the amount bid for said contract; said check to be payable to R. B. Ladd, Township Trustee, and is given to insure that the bidder, after award of the contract, will enter into a written contract with said Trustee to complete said contract according to the plans and specifications of that class of the contract awarded, and that said bidder will furnish a bond in a sum equal to the contract price, payable to said Trustee, with a surety company as surety; said bond to be to the approval of said Trustee, and conditioned that said contractor shall faithfully perform and execute said contract made by him in accordance with said plans and specifications, and under the direction, control and supervision of said Architect, and to the acceptance of said Trustee, and as otherwise provided for by law for public contracts.

Upon failure of said successful bidder to enter into said contract and give bond within fifteen (15) days after the notice of the award, said sum fixed in said certified check shall be forfeited as liquidated damages to said Township.

All bids shall be in plain terms and upon forms prescribed by the State Board of Accounts of the State of Indiana, and may be had upon application to said Trustee or Architect above named.

Said Trustee and Advisory Board reserves the right to reject any and all bids and to take reasonable time for making a decision in awarding said contract or contracts.

R. B. LADD,
Township Trustee of Oak Grove Township, Benton County, Indiana.

WALTER SCHOLER,
Architect-Engineer, 301 Painters' and Decorators' Building, Lafayette, Indiana.

BARCE & BARCE,
Attorneys for Township.

April 20-27; May 4.

COLLEGE BUILDINGS
INSTRUCTIONS TO BIDDERS

Sealed proposals to the Board of Trustees of Purdue University for the following items to be constructed on the grounds of Purdue University, West Lafayette, Indiana, will be received at the office of the Controller, Purdue University, West Lafayette, Indiana, up to 10:00 a. m., Tuesday, May 14th, 1929, at which time they will be publicly opened and read, namely:

Unit No. 1, New Mechanical Building.
New Pharmacy Building.
Unit No. 1, New Chemistry Building.
Additions to the Underground Heating Tunnels.

Steam Piping in the above additions to Heating Tunnels.

Steam Piping for machinery in New Mechanical Building.

Plans and specifications for the building named may be obtained from Walter Scholer, architect, 301 Painters' and Decorators' Building, Lafayette, Indiana, and plans and specifications for the additions to underground heating tunnel and piping may be obtained from Mr. C. D. Bushnell, Superintendent of Physical Plant, Purdue University, West Lafayette, Indiana. Plans and specifications on these projects are on file with the State Board of Accounts, Statehouse, Indianapolis, Indiana; Dodge Reports, 173 W. Madison St., Chicago, Ill.; and The Indiana Construction Recorder, 312 East Market St., Indianapolis, Indiana.

Separate proposals will be submitted on each of the following items on each building:

(a) General construction.
(b) Plumbing.
(c) Heating and ventilating.
(d) Electrical wiring.
(e) Laboratory equipment for chemistry and pharmacy.
(f) Steam piping for Machinery in New Mechanical Building.

Proposals will be submitted on form 96 as prescribed by the State Board of Accounts and in accordance with the specifications, and a certified check to the amount of 3 per cent of the bid or bids will be submitted with thesh proposals.

The Board of Trustees reserves the right to reject any or all bids.

R. B. STEWART, Controller,
Purdue University.

COMMERCIAL ARBITRATION—ITS DEVELOPMENT

Interesting Historical Sketch Presented At the Annual Meeting of the Indianapolis Building Congress

L. K. COMSTOCK,
New York City

Arbitration is the oldest method of settling disputes.

Even after regular courts of law had been duly established and were so constituted as to command the respect and confidence of the community, recourse to arbitration continued nevertheless to be frequent among many of the most civilized nations, at all periods of history from remote times to the present. Among the Romans, the employment of arbitrators largely obtained from an early period.

In France as early as the XIII Century, a Royal Decree required that in every contract of copartnership there should be inserted a clause for the submission of certain classes of questions that might arise between the partners to the determination of arbitrators.

In Scotland in 1695, Articles of Regulation were enacted legalizing arbitration.

In Japan in the XVII Century, arbitration and compromise became the rule, litigation the exception.

From time immemorial trade, local, intercity and interstate, has been carried on through the medium of fairs.

The necessity in all fairs of a tribunal which could promptly deal with the differences arising amongst a fleeting population was the same, regardless of where the fair might be held. The merchants attending the principal fairs of different countries were largely the same. They travelled from fair to fair and from country to country. What they found beneficial in the way of regulations in one part of the world would be equally so in another. And so in time these regulations came to have the authority of established usage because the courts set up by the merchants themselves had so decreed.

There is no record of formal action by any government calling these tribunals into existence. They just grew with the fairs. They offered a rough and ready mode of administering justice. On the continent these courts were presided over by an arbitrator, but the arbitrator wasn't called by that name—he was called a consul.

Out of these fairs there grew a commercial code, independent of country, language or creed, and this code acquired the name Lex Mercatoria or the Law Merchant.

While Mansfield was Lord Chief Justice of England in the reign of George III., the Law Merchant, after a long clash with the Admiralty, was incorporated in the Common Law. But nearly two hundred years earlier another Chief Justice of England, Sir Edward Coke, rendered a decision in the now famous Vynior Case, which to our age seems astonishing and absurd. In this decision, he lays down the dictum that: "A man cannot by his own act make such authority, power or warrant not countermandable, which is by the law and its own nature countermandable."

This dictum has ever since hindered business and retarded the course of arbitration which for uncounted centuries has been developing. We inherited this dictum when we inherited the English Common Law and until the passage of the New York Arbitration Statute in 1920, it dominated American legislative and judicial decisions in the important matter of arbitration. Very little co-operation between legal formality and business practice in this matter could come as a practical aid to the business men, in America, until it was shown that Coke was wrong. This was finally done by Julius Henry Cohen, counsel for the Committee on Arbitration of the New York Chamber of Commerce, whose researches in Norman-French decisions proved that Coke did not know his common law as well as do modern lawyers. This three-century-old dictum virtually held that a contract sacred and enforceable in all other respects was invalid and unenforceable as to that portion of it which would have provided an easy, expeditious and economical way out of possible misunderstandings or disputes.

It would seem hardly possible to our modern thinking for the highest English tribunal of justice to make a pronouncement more offensive to common sense. And yet that decision decame embodied in the English common law which America inherited and Coke's dictum dominated legislative and court opinion until 1920, a period of 311 years, during which the arbitration of a future dispute was illegal and therefore unenforceable.

Harlan F. Stone, an Associate Justice of the United States Supreme Court, has written as follows:

"That two merchants of full age and mental competency should not be permitted by the laws of their country to stipulate for the adjustment and settlement of controversies between them exclusively by arbitration of a fellow merchant, would seem incredible to a layman. It would seem incredible to most lawyers, did we not actually know that such at one time was the law of England and that until the recent adoption of the arbitration statute in New York it was the law of our greatest commercial state, as well as that of most of the states of the Union. There could be no better example of the vitality and persistence of a false doctrine when it is once lodged in the body of our common law than the history of the common law view of the invalidity of arbitration agreements."

Coke's dictum was corrected by act of Parliament in 1889, since which time broad arbitration clauses have been launcned in virtually all written contracts.

It was the text of the New York Arbitration Statute which paved the way for a liberal rule in this country. That act declares that agreements to arbitrate not only existing but also future disputes are irrevocable, binding and enforceable.

Sears-Roebuck Atlanta Building
Architects: Geo. C. Nimmons & Co. Chicago
Contractors: B. W. Construction Co. Chicago

Sears-Roebuck Builds at Atlanta—in Record Breaking Time—with Reinforced Concrete Construction and Institute Reinforcing Steel

THIS reinforced concrete building is 10 stories high—440 feet long and 140 feet wide—with a four-story tower 40 by 30 feet. By using Institute Reinforcing Steel, construction delays were eliminated and an erection speed record set.

Not one day was lost awaiting deliveries of Institute Reinforcing Steel.

Altogether, a total of 35,000 cubic yards of concrete was poured into the caissons, frame and floors.

During four, 5½ day weeks, six stories of concrete work were completely finished. In this time, 12,199 cubic yards of concrete were poured.

As Institute Reinforcing Steel was used throughout—all bars were securely bundled for quick and easy two-man handling. They were plainly tagged, for quick accurate placing. All steel was cut, bent, and completely fabricated before delivery. Only with careful fabrication and accurate deliveries of reinforcing steel could such erection speed be accomplished.

WHAT LEADING INDIANA ARCHITECTS THINK ABOUT THE PROFESSION ADVERTISING

Evansville Society Secures State-Wide Opinion On the Subject

Some weeks ago mention was made on this page of a state-wide survey made by President A. G. Bacon of the Evansville Society of Architects for the purpose of securing a general opinion of members of the architectural profession in Indiana relative to architects advertising.

As was stated previously, fifty-six replies were received in response to the questionnaire sent out and 91 per cent favored the idea of advertising in one form or another.

That you architects may know how your fellow architects feel in the matter, here are some of the opinions expressed.

"I wish to state that we believe the idea of the high-class educational advertising campaign is a very fine thing to make known to the public what the qualifications and duties of an architect are."

* * *

"Personally, I have come to the conclusion that if we would advertise more, and give out fewer plans and sketches, we would be able to build up a professional prestige on a par with that of the doctors and lawyers."

* * *

"I will be heartily in favor of a campaign of this kind coming through the Indiana Society of Architects, and I assure you I will do all possible to help carry out an advertising campaign because I do not think there are more than 10 per cent of the public who know what the duties of an architect are, until they have gone through a stage of building."

* * *

"I know that educational advertising of architectural service is positively necessary to install in the minds of the public a true appreciation of such a service."

* * *

"I most certainly agree that a campaign of education throughout the State, teaching the difference between the architect and draughtsman, also the difference between the architects' service and the service rendered by the so-called architect and builder, is very much in order."

* * *

"It is my opinion that advertising campaign for the architects would be a good thing as an educational campaign to advise people over the entire state as to the status of the architects."

* * *

"I am in hearty accord with any legitimate state-wide advertising campaign."

* * *

"Nothing would suit me better than to try a state-wide campaign of advertising for architects and for our profession in general."

* * *

"There was a time when it was probably unethical for a professional man to advertise, but in these days of cheap competition the right kind of advertising is necessary and should be carried on in an efficient and effective manner."

* * *

"I wish to assure you that I am highly in favor of any sort of a campaign toward bringing about a complete understanding as to the status of our profession."

* * *

"There is no question of the need of educational campaigns to the public, in my opinion, of the services, what and wherefore of the architect. This opinion is based on experience and contact with the public and a group educational advertising would be a good form, if properly handled and gotten out, to help educate the public and put the architects properly before them."

* * *

"Personally, I have always been of the opinion that advertising by architects is of doubtful value, particularly by the individual or single firm. On the other hand, it has often occurred to me that architects as a class have been slow to set before the public the merits of their service. Therefore, it would seem logical that the only legitimate channel left open is the method which you have employed. I would be interested in seeing at least an experiment, tried along state-wide lines, and I am sure that our firm would be willing to do its share in this sort of work."

* * *

"It is my belief that much can be done for the profession by a carefully worked out method of advertising over the state. Not as individuals, but as an organization."

"I am very much in favor of the educational campaign if it can be done in a dignified manner and yet in a simple way, so the dear old public will know what it is all about, selling to him our true worth as architects in the community in which we live."

* * *

"I personally believe that a state-wide educational campaign is what is needed in Indiana."

* * *

"The writer is heartily in accord with the suggested campaign of group advertising in local newspapers throughout the state.

"Because the architect does not advertise his wares, while the builder, material firms, etc., make a practice of doing so, the public too frequently loses sight of the vital contribution of the architect toward the success of the building, in fact, oftimes the public is ignorant of the architect's identity with the project.

"Group advertising seems to be one solution of this unfortunate condition of affairs and should accomplish much in educating the public mind to a better understanding of the important work of the architect."

* * *

"I think it would be well if such publicity was carried out throughout the state."

* * *

"I am a firm believer in a state-wide advertising campaign."

* * *

The names of the men who submitted the above are omitted for sundry reasons, but are on file in this office should any one question the authenticity of these excerpts.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

A Typical Indiana Structural Steel Fabricating Plant.

THE QUALITY OF STEEL

The raw materials from which steel is produced are subjected to accurate analysis. The refining process is carried on under careful metallurgical supervision.

Every step in the shaping, and in the fabrication of finished steel, is accompanied by close inspection. Rolled structural shapes are checked by chemical analysis and physical test before they leave the mill. The quality of steel must conform to an established standard—it must respond to accurate test requirements before it can be sold.

WALLACE STEEL AND SUPPLY COMPANY, Lafayette — Structural and Miscellaneous Steel, Fabricating, Steel Basketball Bank Board Frames.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Quality and Accuracy Safeguard Every Step.

EEL IS UNIFORM

Structural steel must be consistently uniform in quality because the same high standards of physical strength and chemical composition are strictly adhered to by all steel makers in the United States and Canada. The superior strength, durability, elasticity and adaptability of steel is universally acknowledged. It is the best structural material from every viewpoint.

You may buy structural steel from any member of the Indiana Structural Steel Board of Trade with the full assurance that it will conform to the recognized standards.

GENFIRE STEEL COMPANY
305 Merchants Bank Bldg. Indianapolis, Ind.

County, Indiana, until two o'clock in the afternoon of Saturday, the 11th day of May, 1929. Said contract will be let for the furnishing of all material and labor necessary to erect and fully complete and construct certain additions, improvements and extensions to the present consolidated grade and high school building in said Oak Grove Township, and situated on Township lands at Oxford, Indiana, in strict accordance with the plans and specifications therefor, and under the directions and supervision of the Architect-Engineer, Walter Scholer, which plans and specifications are on file in the office of the undersigned Trustee, and in the office of the said Architect-Engineer at 301 Painters' and Decorators' Building, at Lafayette, Indiana, and are open for inspection of all persons and contractors concerned. Said contract will be divided into three (3) classes: First, general contract; second, heating and plumbing and ventilating; third, electric wiring and fixtures. Each bid to be separate, enclosed in a separate envelope and marked with the name of the bidder and class of bid enclosed.

All bids shall be accompanied by a certified check in the sum and amount equal to three (3) per cent of the amount bid for said contract; said check to be payable to R. B. Ladd, Township Trustee, and is given to insure that the bidder, after award of the contract, will enter into a written contract with said Trustee to complete said contract according to the plans and specifications of that class of the contract awarded, and that said bidder will furnish a bond in a sum equal to the contract price, payable to said Trustee, with a surety company as surety; said bond to be to the approval of said Trustee, and conditioned that said contractor shall faithfully perform and execute said contract made by him in accordance with said plans and specifications, and under the direction, control and supervision of said Architect, and to the acceptance of said Trustee, and as otherwise provided for by law for public contracts.

Upon failure of said successful bidder to enter into said contract and give bond within fifteen (15) days after the notice of the award, said sum fixed in said certified check shall be forfeited as liquidated damages to said Township.

All bids shall be in plain terms and upon forms prescribed by the State Board of Accounts of the State of Indiana, and may be had upon application to said Trustee or Architect above named.

Said Trustee and Advisory Board reserves the right to reject any and all bids and to take reasonable time for making a decision in awarding said contract or contracts.

R. B. LADD,
Township Trustee of Oak Grove Township, Benton County, Indiana.

COLLEGE BUILDINGS
INSTRUCTIONS TO BIDDERS

Sealed proposals to the Board of Trustees of Purdue University for the following items to be constructed on the grounds of Purdue University, West Lafayette, Indiana, will be received at the office of the Controller, Purdue University, West Lafayette, Indiana, up to 10:00 a. m., Tuesday, May 14th, 1929, at which time they will be publicly opened and read, namely:

Unit No. 1, New Mechanical Building.
New Pharmacy Building.
Unit No. 1, New Chemistry Building
Additions to the Underground Heating Tunnels.

Steam Piping in the above additions to Heating Tunnels.

Steam Piping for machinery in New Mechanical Building.

Plans and specifications for the building named may be obtained from Walter Scholer, architect, 301 Painters' and Decorators' Building, Lafayette, Indiana, and plans and specifications for the additions to underground heating tunnel and piping may be obtained from Mr. C. D. Bushnell, Superintendent of Physical Plant Purdue University, West Lafayette, Indiana. Plans and specifications on these projects are on file with the State Board of Accounts, Statehouse, Indianapolis, Indiana; Dodge Reports, 173 W. Madison St., Chicago, Ill.; and The Indiana Construction Recorder, 312 East Market St. Indianapolis, Indiana.

Separate proposals will be submitted on each of the following items on each building:

(a) General construction.
(b) Plumbing.
(c) Heating and ventilating.
(d) Electrical wiring.
(e) Laboratory equipment for chemistry and pharmacy.
(f) Steam piping for Machinery in New Mechanical Building.

Proposals will be submitted on form 96 as prescribed by the State Board of Accounts and in accordance with the specifications, and a certified check to the amount of 3 per cent of the bid or bids will be submitted with thesh proposals.

The Board of Trustees reserves the right to reject any or all bids.

R. B. STEWART, Controller,
Purdue University.

April 20-27—May 4-11

MULTIPLY MAN POWER WITH A CROWE SAFETY SAW

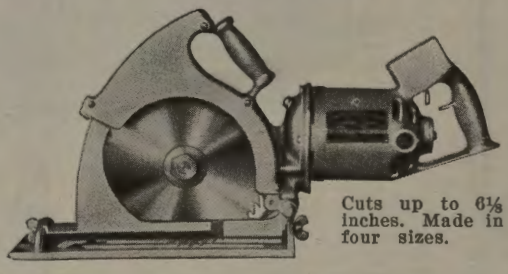
Men like to use a Crowe Safety Saw. One man with a Crowe can do as much work as ten men with ordinary saws, or two men with other portable electric saws. And it takes that hard grind out of the work.

Every day men are demonstrating its utility and their preference for it. Made of aluminum alloy, they carry it to the lumber, plug into a light socket, and the G. E. motor drives it through the lumber in record-breaking time.

All Crowe saw blades are standard and interchangeable—cross cut, rip or combination blade. Absolutely no danger to the operator. Saw is guaranteed against defects in material or workmanship.

Ask us about our time payment plan. Perhaps you can let the saw pay for itself.

Two minutes now will save you hours later. Write today for full particulars.



Crowe Safety Saws are patented. Equipped with ball bearings throughout. General Electric motors and Ingersoll-Rand motors used. Any type of blade supplied as ordered. Cutting line is always in sight.

"CROWE SAFETY SAW" CUTS THE COST

You can buy the Crowe Safety Saw in four different sizes, giving you a wide range of efficiency.

For those jobs where electricity is not available, a Crowe Air-Driven Safety Saw has been built. It has all the excellent qualities of the electrically driven saw. If you cut lumber on the job, a Crowe Safety Saw will do the work in less time than any saw you've seen.

Officially approved for safety by industrial commissions, listed as standard by Underwriters' Laboratories, and recommended by insurance companies.

Cuts up to 6½ inches. Made in four sizes.

Vol. XI | INDIANAPOLIS, INDIANA, MAY 11, 1929 | No. 7

STEADY GAINS GENERALLY IN BUILDING CONSTRUCTION OPERATIONS ARE BEING REGISTERED IN INDIANA

Renewed Activity Developing As Season Progresses

Slowly but surely, according to the official figures submitted by the various city building inspection officials about the state, building construction operations in Indiana are on the increase as the new season develops. Steadily the monthly figures have shown an improvement over the records of the corresponding period a year ago, and each month since the first of 1929 has turned in a better volume of new business than the preceding month. In other words, this season's building record in Indiana while not showing an abnormal gain, nevertheless, is growing more promising right along.

Eleven cities reporting for April turned in an aggregate volume of new building work that registered a three per cent increase over the March, 1929, business and a six per cent advantage over the figures for April, 1928.

Among the cities showing the greatest increased activity over last year were Michigan City, 496 per cent gain, Fort Wayne, 116 per cent gain; South Bend, 56 per cent gain, and Richmond, 49 per cent gain.

The official figures for the month of April from eleven Indiana cities are:

City	Est. Val.	Pct.
Elkhart	$ 84,339	86
Evansville	480,481	550
Fort Wayne	888,792	206
Hammond	302,800	90
Indianapolis	1,300,741	969
Kokomo	44,052	73
Michigan City	288,030	35
Muncie	517,522	471
Richmond	181,225	89
South Bend	701,815	595
Terre Haute	84,336	179
	$4,874,133	3343

STATE BUILDING CONGRESS TAKES STAND FOR INDIANA BUILDERS

Calls Attention to Necessity For Protecting Home Industry

In order to call the attention of Public Officials and Trustees of State, County and Municipal public buildings and institutions to the fact there exists in Indiana today a tendency to award contracts to out-of-the-State men where the apparent difference in cost is small. The Indiana Building Congress adopted this resolution:

WHEREAS, there are competent and financially qualified Architects, Engineers, General Contractors, Mechanical and Sub-Contractors in the State of Indiana capable to handle successfully these contracts, and,

WHEREAS, as those connected with the Building Industry in Indiana are familiar with the State Building Rules and Regulations as they apply to Building Construction and the installation of mechanical equipment, the same having been promulgated by the Administrative Building Council of Indiana under the authority of an Act of the General Assembly, approved March 3, 1923, and are now in full force and effect; and,

WHEREAS, moneys derived for public building purposes are secured through appropriations or taxation in the State of Indiana, and

WHEREAS, the "Indiana Building Congress" representing a membership of over 40,000 men engaged in the Building Industry, a majority of whom are taxpayers and are vitally interested in Building Construction,

THEREFORE, be it resolved by the Indiana Building Congress that we hereby recommend that on both Public and Private Building Construction that preference should be given to Indiana men.

WELL KNOWN ANDERSON CONTRACTOR PASSES ON

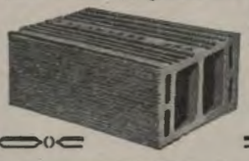
David Eshelman Called

The Indiana building industry lost another one of its deans recently with the passing of David Eshelman, Anderson, Ind.

The deceased was one of the older school of builders, and as a general contractor built many large structures in his home city, as well as throughout the state.

He was senior member of the general contracting firm of David Eshelman & Sons. His two surviving sons, Ross W. and Albert A. Eshelman, will continue the business under the old firm name. Both of these men, who are well known among the members of the Associated Building Contractors of Indiana, an organization in which they have been active for years, have the sympathy of their many friends throughout the state.

NOT SO GOOD



Building Returns at Indianapolis Slipped

At first glance, on the face of the returns made by Mrs. Clara Oxley, statistician of the City Building Inspection Department, it would seem Indianapolis did fairly well in the matter of new building construction launched in April, when over a million dollar volume of new work was reported. However, comparisons dim the showing, for this figure fell below the March returns this year and was far in arrears of the April, 1928, record. Had it not been for the residential activity, which was in good volume, things would have been in a bad way, as there was a complete absence of large structures.

April, 1929, Total	969	$1,300,741
April, 1928, Total	1084	1,908,511
April, 1929, Deficit	115	$600,770

To Build of Permanent Reinforced Concrete

THE Jones Warehouse, Houston, Texas, is three stories high, and ninety feet square. It was originally designed for wood construction. The bid, including a sprinkler system, was $47,320.00.

With concrete, and Institute Reinforcing Steel, the bid on the Jones Warehouse was $47,200.00—actually $120.00 LESS than the bid for wood construction including the sprinkler system.

In addition, concrete construction is fireproof, permanent, and clean. Depreciation and upkeep are far, far lower—life is far, far longer. Reinforced concrete means a much greater profit for the owner.

And Institute Service Helped Build It Faster

By using Institute Reinforcing Steel, and Institute Four-point service, the concreting was completed without delays. The concreting and in addition the excavating, were completed in seven weeks. It would be hard to beat the erection speed of concrete, reinforced with Institute steel.

REINFORCED CONCRETE CONSTRUCTION MEANS A COMPLETELY FIREPROOFED FRAME

AN OLD SPECIFICATION

From a file of old letters and documents relating to affairs in Indiana nearly a century ago, the antiquarian calls our attention to a sheet of paper, yellow with age, on which were written specifications for the first court house in Clinton county. Architects and contractors will be able to make some interesting comparisons between the simple description of materials required in this building ninety years ago and the long and technical specifications of today.

As to plumbing and heating. There was no plumbing, and heating was taken care of by providing that there be a fireplace of suitable size in each room. The masonry requirements, however, went beyond our present-day practice by requiring that clay for the brick should be dug and prepared in the fall in order that it might freeze and mellow for spring operations.

Perhaps we may without further introduction reprint this old document in full, with its requirements for county offices, a court room and over all a dome, with a light vane rod carrying a fish of suitable size. We invite our readers to point out any omissions or indefinite descriptions that might mislead the builder or enable him to do less than was intended. To us, they seem to cover the ground very well.

"Specifications of Clinton County Court House as Extracted from Order Book of Commissioners

Peck's plan is adopted in the main with four alterations, viz., the wall of the first story to be 18 inches thick with eight inches of a pilaster with the spaces as per plan. The pilasters to be built solid three feet from the base and from thence to the top hollow opening in the pilaster 4 inches. The wall of the second story to be 13 inches thick. The partition walls of the first story to be 18 inches and of the second story 13 inches—plain wall. The columns to be built of brick as per plan, the recesses to be laid flemish Bond painted and pencilled—the pilasters to be plain wall and painted White and the columns to be painted White. Foundation as follows: To be from the surface to bottom of foundation 2 feet deep provided the ground is suitable and three feet thick of Stone of good quality to be grouited with good lime and sand Mortar —the foundation Wall from the Stone Wall to the bottom of joists to be as per plan and thirty inches thick.

The isle to be ten feet wide in the clear and the sides to be equally divided into four rooms, 2 on each side. The N. W. Corner and in the North portico to be finished fire proof and the room in the N. E. corner of the North portico to be finished for a wood house.

The Stair Ways to be made as per plan with hand rail and turned banisters—to be one good Iron Banister in each flight of the Stair ways. The doors at the north and South end of the building to be folding and arch transom lights over each door. The lower story to be 12 feet high in the clear and the upper Story to be 15 feet high to the springing of the arch. The arch to be a segment of a circle, a domical Sky light, in size to be in proper proportion with the height and size of the building—a light vane rod with a fish of suitable size. The joists of the upper story or Second Story to be covered with rough inch oak flooring Square joint and that to be covered a coat of good strong plaster one inch thick all over and or this coat of plaster a good pin oak floor of 1¼ inch plank, tounged and grooved to be laid. The court circle and bar to be finished as per plan in the North end of the building and the Spectators' Seats to be made as per plan in the South end of the building to be elevated and divided North and South by a straight isle from South to North, eight feet wide and suitable steps up to the seats. The Stair ways to land through the walls under the portico into the Isle Eight feet wide on the upper floor—a circular Isle from east to west as per plan and the number of Seats as per plan.

The windows up and down Stairs as per plan to be fifteen lights each. Glass 12 by 16 inches—the Sash to be double hung with the best patent sash cord on 2 inch axel Iron frame pullies, Spring Ketches on the Meeting rails and Brass lifts on the bottom—Sash to be 1¾ inches thick and tounged and grooved.

The roof to be made of good yellow poplar shingles 11 inches long and 5 inches to the weather to be well painted —good Tin gutters on the eves and 4 Spouts one at each corner, the heads of which are to be finished in the best Modern Stile, the year the house is put up on them, in characters made of gold leaf —Lightning Rod with suitable fastenings and non conductors—The dome to be covered with zink.

The inside of the building to be well plastered throughout with the exception of the Wood room, with three coats of plaster hard finish. The judges Seat and Bar circle to be painted White in the neatest manner and all the balance of the inside work below to be painted a cream color. A fire place in each room in the angles of the principal walls of suitable Size. The outside wall under the portico to be painted White as the columns. The lower Story Windows to have Shutters—8 panels—and to be finished bead and flush on outside and raised panel and moulding on the inner Side —the upper Story Windows to be finished with Venetian Blinds.

The Clay from which the Brick are to be manufactured is to be dug and prepared this fall in order that it may freeze and mellow for Spring operations. The whole work to be completed on or before the first day of Nov. 1838.

The Building and inspecting committee appointed by the Board of Commissioners are David B. Clark and Thornton Griffith with them all alterations, etc., etc., must be agreed on by the builder.

Payments are Twelve Hundred Dollars in hand,

Eighteen hundred dollars on 1st Sept. 1837.

Two thousand dollars on 1st Nov. 1838. Balance in two equal annual payments.

lowing will figure the general contract: Jack Cole Contracting Company, Paducah, Ky.; Raymond Contracting Company, Bowling Green, Ky.; Long and Whoberry, Hopkinsville, Ky.; T. E. Sublett, Owensboro, Ky. Plans will also be on file at the Builders Exchange, 408 McDowell Bldg., Louisville, Ky.

***Bank Building** (addition and remodeling): $25,000.00, 2-stys. and bas., addition, 18x50, North Vernon. Archt., Fermor S. Cannon, 21 Virginia avenue, Indianapolis. Owner, First National Bank, E. H. Lange, cashier, North Vernon. Bids in, under advisement.

Contracts Awarded

STEEL INSURES STRENGTH AND SECURITY

Steel forms the framework of the new section of the Eastern Star Hospital, Franklin, Ind. McGuire & Shook, Architects; Roy C. Bryant, Contractor. Steel fabricated by Pan-American Bridge Co., Newcastle, Ind.

STEEL'S
Strength
and
Elasticity
Insure Safety

Structural steel is strong and resilient. It has the property of recovering quickly from great shock and strain without any impairment of strength and durability.

The process of making structural steel, which includes repeated rollings, gives to the metal a tough and springy structure. This characteristic of the material makes a steel beam or column stubbornly elastic. Structural steel will give, almost imperceptibly, under heavy shock or load and recover its original form without fatigue or failure.

No other building material has, to any degree, this property of resilience. No other material can be depended upon to so completely recover when shocks cease or loads are removed.

KOEHRING

DANDIE

with Batchmeter

A Two Bagger that Meets Specifications

AN adequate sized drum to hold 10 cu. ft. with liberal, generous room for proper mixing action, this Dandie, with batchmeter, and accurate, automatic water measuring safeguards the contractor on strict specification jobs, bridges, retaining walls, etc.

Fast! Fast because of low, high-speed charging skip that chutes material into the drum in a swift clean slide —because of high, narrow drum that pours a big volume down on discharge chute—because of discharge that starts instantly, cuts off instantly! Enclosed worm drive in oil bath!

GIVE us a chance to show you what Dandies are doing in this territory—what our service means in more profitable operation of any equipment!

Dandie Mixers: 5-S, 7-S, 10-S

5-S single cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

A-5092-½-R

THE G. E. HILLSMAN CO.

H. W. TAYLOR, *Indiana Manager*

Sealed Proposals

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Trustees of the Indiana School for the Blind, Indianapolis, Indiana, at the office of the Board, in the present building, located at North and Pennsylvania streets, Indianapolis, Indiana, until 2:00 o'clock p. m., June 5, 1929, for the completion of the Indiana School for the Blind on the site at 75th street and College avenue, Indianapolis, Indiana, in accordance with the plans and specifications prepared by and under the supervision of Harrison and Turnock, Architects and Engineers, 500 Board of Trade Building, Indianapolis, Indiana, said plans now being on file in the office of the Board of Trustees of the Indiana School for the Blind, the Indiana State Board of Accounts, State House, Indianapolis, and in the office of the Architects and Engineers.

Separate bids will be received upon General, Heating, Plumbing, and Electrical work.

All bids must be submitted on Blank Form No. 96 as prescribed by the Indiana State Board of Accounts.

Copies of plans and specifications may be secured by contractors at the offices of the Architects and Engineers, upon deposit of a check made payable to the order of said Architects and Engineers, for the sum of Twenty-five ($25.00) Dollars, as surety for the return of the plans and specifications to the office of said Architects and Engineers in good condition.

The right is reserved by the Board to reject any and all proposals.

By order of

THE BOARD OF TRUSTEES,
INDIANA SCHOOL FOR THE BLIND.

May 11-18-25.

COLLEGE BUILDINGS
INSTRUCTIONS TO BIDDERS

Sealed proposals to the Board of Trustees of Purdue University for the following items to be constructed on the grounds of Purdue University, West Lafayette, Indiana, will be received at the office of the Controller, Purdue University, West Lafayette, Indiana, up to 10:00 a. m., Tuesday, May 14th, 1929, at which time they will be publicly opened and read, namely:

Unit No. 1, New Mechanical Building.

New Pharmacy Building.

Unit No. 1, New Chemistry Building.

Additions to the Underground Heating Tunnels.

Steam Piping in the above additions to Heating Tunnels.

Steam Piping for machinery in New Mechanical Building.

Plans and specifications for the building named may be obtained from Walter Scholer, architect, 301 Painters' and Decorators' Building, Lafayette, Indiana, and plans and specifications for the additions to underground heating tunnel and piping may be obtained from Mr. C. D. Bushnell, Superintendent of Physical Plant, Purdue University, West Lafayette, Indiana. Plans and specifications on these projects are on file with the State Board of Accounts, Statehouse, Indianapolis, Indiana; Dodge Reports, 173 W. Madison St., Chicago, Ill.; and The Indiana Construction Recorder, 312 East Market St., Indianapolis, Indiana.

Separate proposals will be submitted on each of the following items on each building:

(a) General construction.
(b) Plumbing.
(c) Heating and ventilating.
(d) Electrical wiring.
(e) Laboratory equipment for chemistry and pharmacy.
(f) Steam piping for Machinery in New Mechanical Building.

Proposals will be submitted on form 96 as prescribed by the State Board of Accounts and in accordance with the specifications, and a certified check to the amount of 3 per cent of the bid or bids will be submitted with thesh proposals.

The Board of Trustees reserves the right to reject any or all bids.

R. B. STEWART, Controller,
Purdue University.

April 20-27—May 4-11

BOILER HOUSE

NOTICE TO CONTRACTORS

Bids will be received by the Board of Trustees of the Indiana State Teachers College at 9 A. M., May 20, 1929, at the office of the State Superintendent of Pub-

lic Instruction, State House, Indianapolis, Indiana, for the erection and completion

Separate bids will be received for the general construction, for the boilers and appurtenances, for the plumbing, and for the coal and ash handling equipment.

Bids must be made on Form No. 96, prescribed by the State Board of Accounts, and must be accompanied by a certified check equal to 5 per cent of the amount of the bid.

Detailed plans and specifications will be on file at the office of the Registrar of the Indiana State Teachers College, Terre Haute, and in the office of the State Board of Accounts, State House, Indianapolis, Indiana. The Baker Shore-Head

CUTS THE COSTS

SPEEDS THE JOB

The Baker Shore-Head was developed as the result of our analysis of shoring costs while working out the Baker Shore (adjustable). It is built of channel members and welded connections throughout. Tests prove a large factor of safety in carrying the loads to which it could be subjected. Some of its advantages:

Light but rigid.
Easy to assemble.
Uses odd 4 x 4's for T-bars.
Easy to dismantle.
Inexpensive to ship.
Takes small storage space.
Adaptable to all conditions.

The Baker Shore-Head is carried in stock at our Indianapolis plant and is available for immediate shipment. When used with Baker Shores it affords the utmost in shoring economy. Call our nearest office for further information.

BUILDING CODE LEGISLATION

Its Benefits and Dangers

ARTHUR TAPPAN NORTH
Member American Institute of Architects
New York City

A universal state of the highest condition of public welfare and prosperity can be found only within the jurisdiction of equitable laws justly enforced. Inequitable laws may promote the prosperity of favored persons or special commercial interests but they are invariably prejudicial to general welfare and prosperity. Equitable laws afford the greatestest freedom of action and widest range of choice consistent with public welfare. Inequitable laws impose restrictions on the freedom of action or choice which are not justified by experience or definite scientific knowledge.

When laws can affect favorably the financial condition of persons, industrial or corporate interests, there is the ever-present effort to constitute them so that the special interest is served. This is a natural effort to which cognizance must be given and consummation prevented. This is applicable to a wide range of laws and the efforts to prevent the enactment of inequitable laws are confined usually to various groups of individuals whose interests may be affected adversely.

One form of legislation, the building code, has widely diversified elements because it includes certain police measures to secure safety to life, fire prevention and healthful living conditions, the normal corollaries of which are improved mental, physical and moral conditions and economic state.

The economical phases of the building code's influence are not generally understood. The code, which imposes certain maximum limits for the use of building materials, can stimulate and increase the use of any building material, and it can, per contra, reduce the use of any material of construction. Selfish interest is quick to recognize the economical potentialities of the building code and seeks to profit thereby.

It is readily understood that if the building code is so constituted that it gives greater privileges for the use of one material and imposes restrictions upon the use of another and competing material, an unnatural, unjust and dishonest condition obtains which subverts true competition and is detrimental to public welfare.

It is through free and unrestricted competition between building materials that capital invested in building construction produces the greatest net returns. Such a condition attracts capital investment, increases building construction, expands the industrial and commercial elements of the community and increases the value of taxable property, all of which is manifested in the welfare and prosperity of the public.

It is proper for any person or interest to endeavor to secure favorable code requirements for the use of its products within maximum safe limitations. The preparation and presentation of data for consideration entails a legitimate expense to be borne by the proponent. However, some personal and commercial interests resort to various forms of promotion to secure favorable legislation for their products and unfavorable legislation for competing products. Sometimes these efforts partake of a degree of corruption, direct or indirect. As a rule American building code legislation is intended to be equitable and inequitable legislation is due either to ignorance or lack of unbiased competent counsel.

A complete building code is prepared only at a great expense. When a person or a commercial interest that can profit by such enactments, presents a complete code without cost to any legislative body, commission or organization for the purpose of securing its enactment, it is safe to assume that some unfair advantage is sought. The enactment of such a complete building code would be as impolitic as it would be for the federal government to enact a complete tariff schedule prepared by one industry. Such an act is unthinkable. The legislative body, commission, organization or community is led to believe that the tender of a complete building code without cost, is an altruistic, philanthropic act on the part of the donor. The preparation of a complete building code entails a legitimate community expense and the saving of this expense is represented as resulting from the business acumen and enterprise of the legislators in behalf of the community. It is a most insidious proposal because public officials usually enjoy the role of public benefactors. The stakes are high and unscrupulous persons or commercial interests often seek to win them at any cost.

Proposals for inclusion in a building code should be received without prejudice and studied with the public benefit as the only consideration. They can be measured by accepted standards and if so determined an equitable law will be the resultate.

The great increase in the already tremendous volume of building construction makes it a fertile field for commercial exploitation and indications of such activities appear in some efforts to enact new or amend old building codes throughout the country. Unprecedented activity in building code legislation is justified by the rapid progress in the improvement in old and discovery of new building materials and the betterment of construction methods, the benefits of which the public should enjoy. A building code may become practically obsolete in five years after its enactment and continuous amendment is desirable.

In view of the needed and possible benefits to public welfare and community economics, and the selfish interest in the profits affected by building code legislation, citizens generally and those directly concerned should exercise constant vigilance to secure equitable building codes. It is a measure of common safety to "beware of Greeks bearing gifts" in the form of complete building codes tendered by commercial interests without cost, in which are concealed those provisions which handicap competing interests and burden the community with an inequitable, inadequate and dishonest law.

Tall . . . Very Slender, Yet Resists Full Pressure of Lake Winds

The Flamingo Hotel, 5510 South Lake Shore Drive, Chicago, is an interesting example of the great rigidity and strength of reinforced concrete construction.

This tall, slender building (21 stories with tower 216 feet above grade, 150 feet long and only 50 feet wide) must resist the full sweep of Lake Michigan winds.

Exterior stair courts at the narrow ends of this building further affected the slenderness. Proper wind bracing required heavy girders and specially designed columns of reinforced concrete.

The Flamingo was started September 17, 1926—the concrete structure was completed January 16, 1927.

We repeat: *reinforced concrete assures strength, speed, permanence, beauty and economy.*

GEORGE W. ALLEN.....President **GEORGE C. WRIGHT.....Secretary**

THIS I. S. A. CO-OPERATION SHOULD AID NOT ONLY OFFICIALS BUT ALSO THE PROFESSION

Educational Authority in Presenting Data on Building Gives Architects a Strong Position in the Picture

A year or more ago questionaires were sent to members of the Indiana Society of Architects for the purpose of securing data that would enable Z. M. Smith, Director of Vocational Education for Indiana, to prepare a score card for evaluating architectural service in the planning and constructing of rural school buildings. The data thus secured was to be put into form and distributed to Indiana school officials as a guidance in the preliminaries necessary where school house construction was contemplated, the aim being to enlighten officials as to the value of architectural service and its distribution across the project involved.

While the response elicited was not copious at the same time the material secured was gratifying and the little pamphlet is now off the press.

It is interesting to note the necessity for thorough and thoughtful planning Mr. Smith stresses in his introduction. Here is what he says:

School House Planning—Its Importance

The importance of thoughtful and thorough planning for school building construction has not been given the emphasis deserved. It is nothing short of tragic when a community expends thousands of dollars on a school building which proves to be ill-suited to the educational needs of the community, too small for the number of pupils to be accommodated, poorly constructed with respect to material and workmanship, inconvenient in arrangement, inadequately lighted, heated and ventilated, uninviting in outward appearance, and located on an undesirable site or poorly located on an ideal site.

The Futility of Haphazard Planning

In many instances no plans for the construction of a school building are given consideration until immediate necessity forces action. Too often the plans approved for a building are but either a duplication or a slavish imitation of plans for a building that has been constructed in another community. In such cases the plans are chosen, probably, because the general appearance and the size of the building appeal to the person or the committee charged with the responsibility of constructing the new building and because the amount of money available for the new building is approximately the same as the sum expended on the building to be duplicated or imitated. Such a method of procedure is to be condemned because the results secured are usually inadequate, uneconomical in attainment, and disappointing.

Thorough Planning Needed

To meet the school building needs of the present and of the future will require large expenditure of public funds. These expenditures can not be justified unless they purchase the maximum of school building service for both the present and the future. The guarantee of such service will rest on a thorough analysis of the school building problems for each situation. Among the important questions involved in these problems are the following: What are and what will be the boundaries of the territory which the building will serve? What is the number of children to be accommodated at present and what will be the maximum number to be provided for? What is and what will be the distribution of these children by grades? What are and what will be the kinds of instruction for which provision must be made? Will the building be used as a community center? What is and what will be the form of school organization? What class of construction is most desirable? How can funds be made available? In what amount can funds be made available? To answer these questions satisfactorily will require that all the problems involved be studied thoroughly by the authorities responsible for the educational and business administration of the schools under their jurisdiction.

After these questions have been answered satisfactorily, attention must be given to the selecting of the exact site for the school building, to the preparation of preliminary sketches, and to the estimating of construction costs. Solution of the problems relating to site, preparation of preliminary sketches, and estimating of construction costs will require the services of a competent, dependable architect.

The Services of An Architect Are Essential

Locating, planning, and constructing school buildings have become a science, an art, and an important phase of school administration. The knowledge and skill of the engineer, the designer, and the school administrator must be combined in practical application to the planning and constructing of a school building, if the completed building is to meet the conditions of maximum usefulness, of durability, artistic design, and economical cost of construction and upkeep. The architect must be depended upon for plans and specifications for the building and for the supervision of its construction.

Employing Your Architect

The basis on which to select your architect is his character, his demonstrated ability, his training, and his experience. He should possess these qualifications to the degree that he is equipped to deal specifically with school building construction problems in a competent and dependable manner. If his record shows that he is capable, is of the highest type of integrity and possesses adequate business capacity and artistic ability, you will be justified in contracting for his services.

The architect who has the qualifications specified in the preceding paragraph is entitled to a fee commensurate with the services he renders. He can not afford capable. The architect who meets in a high degree the qualifications specified above will not accept a commission or other compensation from a contractor or to do less than the best of which he is any person other than his client.

In drawing up a contract with your architect use either the established form of contracts prepared by the proper authorities of your state or the Standard Contract between architect and owner prepared by the American Institute of Architects.

Martinsville. Archt., Fermor S. Cannon, 21 Virginia avenue, Indianapolis. Owner, Grassyfork Fisheries Company, Eugene Shireman, president; H. A. Deturk, manager, Martinsville. Bids in under advisement.

***Fisheries Building** (kiln house): 1-sty., 30x100, Martinsville. Archt., Fermor S. Cannon, 21 Virginia avenue, Indianapolis. Owner, Grassyfork Fisheries Company, Eugene Shireman, president; H. A. Deturk, manager, Martinsville. Bids in under advisement.

***County Building** (garage) $47,000.00, 1-sty., Alabama and Maryland streets, Indianapolis. Archt., Ernest R. Watkins, 347 Farmers Trust Bldg., Anderson. Owner, Marion County Board of Commissioners, Harry Dunn, auditor, Court House, Indianapolis. Receiving bids to 10 o'clock A. M., Friday, May 24th. Brick, concrete and steel. Work consists of general contract, including construction, clearing site, removal and rebuilding of entrance to west jail basement entrance, building of approaches, including curb, walks and drives; heating, plumbing and sewer work; electrical wiring, fixtures and equipment. The following are additional bidders on the general contract: David Eshleman and Son, Anderson; A. R. Hunnicut, Union City; J. A. Cooper and Son, 1827 Ashland avenue; Krebay Construction Company, 802 New City Trust Bldg.; Service Construction Company, 301 Castle Hall Bldg.; Elliott-Myers Construction Company, 508 Fidelity Trust Bldg., all of Indianapolis. The following are figuring the plumbing and heating: Strong Brothers, 309 North Alabama street; Freyn Brothers, 1028 North Illinois street; Fred G. Janitz, 619 Virginia avenue; Roland M. Cotton Company, 1720 East 10th street; Hayes Brothers, 236 West Vermont street; L. B. Skinner, 518 Massachusetts avenue, all of Indianapolis. The Skillman Electric Company, 129 West Market street, Indianapolis, are figuring the electrical wiring.

***School Building** (addition): $40,000.00, 2-stys. and bas., Boswell, Grant township, Benton county. Archt., Leonard, Wolfe and Hoagland, 1307 New City Trust Bldg., Indianapolis. Owner, James Dewey, trustee, Boswell. Receiving bids to 1:30 o'clock p. m., Friday, May 24th. (See legal advertisement in this issue.) Brick, concrete and steel construction. Will include a gymnasium and 7 classrooms. The following are figuring the general contract: O. M. Reid, Frankfort; James K. Mitchell, West Lebanon; David L. Thomas, Tipton; L. E. Wickersham, Logansport; Clyde McMasters, Frankfort; E. S. Moore and Son, Danville, Ill. The following are figuring the plumbing and heating: W. W. Owens, Williamsport; Emshoff and Layton, Frankfort; Klentzer and Klentzer, Boswell; Duncan and Larson, Lafayette; Orth Plumbing Company, Lafayette; Layne-Pyke-Werkhoff, Lafayette. E. T. Chaille, Frankfort, and Floyd Hickman, Oxford, are figuring the electrical wiring.

***Church Building** (Sunday School addition): $30,000.00, 2-stys. and bas., 46x62,

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of German School Township, Bartholomew County, Indiana, will receive bids at the office of the Township Trustee, Taylorsville, Indiana, until 10 o'clock a. m., of Wednesday, June 5, 1929, for the erection and completion of the general construction of a one-story Grade School Building, to be erected in Taylorsville, Indiana, and will at the same time and place receive bids for the Heating and Ventilating, Plumbing and Sewerage, and Electric Wiring for the said building, in accordance with the plans and specifications prepared therefor by Norman H. Hill, Architect, and adopted by the Trustee and Advisory Board, said plans and specifications now being on file in the office of the Trustee, the Architect and the State Board of Accounts. The estimated cost of such work is $60,000.00.

Separate bids will be received on different portions of the work as follows: General Contract, Heating and Ventilating, Plumbing and Sewerage and Electric Wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the State Board of Accounts and sealed and in every respect must conform to the laws of the State of Indiana and to the rules and regulations of any governing State Board of the State of Indiana. The right is expressly reserved to reject any and all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to German School Township, Bartholomew County, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a Surety Bond for the full amount of his bid, approved

SCHOOL BUILDING
NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of Noble township, Shelby county, Indiana, will receive bids at the office of the township trustee, Geneva, Indiana, until 1 o'clock p. m., of Monday, June 10, 1929, for the erection and completion of the general construction of a one-story grade school building to be erected on a site near Geneva, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building, in accordance with the plans and specifications prepared therefor by Norman H. Hill, architect, and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect and the state board of accounts. The estimated cost of such work is $42,000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the state board of accounts and sealed and in every respect must conform to the laws of the state of Indiana and to the rules and regulations of any governing state board of the state of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble school township, Shelby county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware street, Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that sealed proposals will be received by the trustee of Grant school township, of Benton county, Indiana, on Friday, May 24th, 1929, at 1:30 o'clock in the afternoon on said day, at the public library building, in the town of Boswell, Benton county, Indiana, for the construction of an addition and enlargement to the present grade and high school building in said township. The bids to be submitted and contract of the successful bidder will be in accordance with the plans and specifications prepared by Leonard, Wolf and Hoagland, architects, Frankfort, Indiana.

Plans and specifications will be filed at the office of the township trustee of said Grant township, and also in the office of the architects, at 309 Peoples Life building, Frankfort, Indiana, and at room 1307 City Trust building, Indianapolis, Indiana, on and after the 3d day of May, 1929.

Any prospective bidder desiring to take copies of said plans and specifications from either of said placesc will be required to make a deposit of twenty-five dollars ($25.00) for their safe return.

The approximate total cost of the proposed addition and enlargement of the present grade and high school building in Grant township, Benton county, Indiana, is forty thousand dollars ($40,000.00). All of the work or supplies in any one class shall be included and let in a single contract.

Bidders will be required to submit their bids upon said proposed contracts in the following manner:

1. On all work complete as contemplated in the general specifications, exclusive of plumbing, heating and electrical work.

2. On all work complete as contemplated in the heating and ventilating specifications.

3. On all work complete as contemplated in the plumbing and sewering specifications.

4. On all work complete as contemplated in the electrical wiring and electrical fixtures specifications.

5. On a combined bid, including all work complete as contemplated in heating, ventilating, plumbing and sewering specifications.

All bids must be in writing, sealed and with the envelope endorsed, giving the name of the bidder, and all will be opened at the time and place fixed in this notice.

All bids must be made out on forms as prescribed by the state board of accounts.

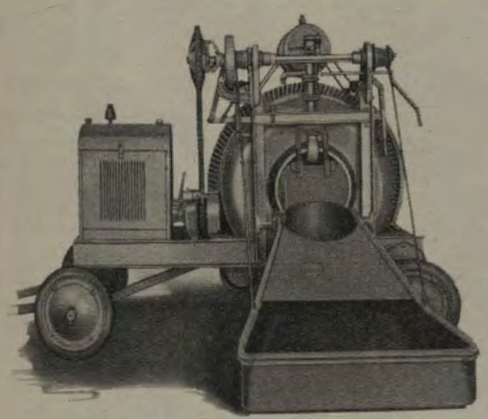
Each bidder will be required to accompany his bid with a certified check for a sum equal to five per cent of his bid, payable to said trustee or order. The check of the successful bidder will be returned when he has executed proper contract and bond, and in the event that such successful bidder fails to execute proper contract satisfactory to said trustee, and give the required bond within ten days, then such check of the bidder so in default, shall be forfeited to said trustee as liquidated damages for such failure.

The contract will be let in compliance with the law to the lowest and best bidder and said contract shall cover all legal requirements of the school law in force.

The trustee and advisory board reserve the right to reject any and all bids.

Dated this 22d day of April, 1929.

JAMES DEWEY,



Trustee of Grant township, Benton county, Indiana.

GEORGE FOSTER,
ALBERT JOHNSON,
CHARLEY JOHNSON,

Advisory board of Grant school township, Benton county, Indiana.

The Terminal Garage, another of the series of three multi-storied d'Humy type garages erected last year in Cincinnati, has a capacity of six hundred cars. This garage uses d'Humy Motoramps in the double ramp system. For every garage there is a d'Humy ramp layout which will provide the maximum storage and operating efficiency. This depends on the size and shape of the ground, and its relation to traffic arteries, the number of levels, service facilities, etc. Our engineers with those of the d'Humy organization will be pleased to co-operate with garage designers to determine the best layout for both operating and structural efficiency.

For the building, with over one hundred thousand square feet of floor area, ribbed slab (concrete joist) was selected as the most economical construction. This building also was erected with the aid of

BUILDING FIGURES FOR APRIL INDICATE RENEWED ACTIVITY IN OPERATIONS ABOUT THE COUNTRY

Decided Gains Shown Both Over March This Year and the Corresponding Period In 1928

Official reports of building permits issued in approximately six hundred cities of the country, for the month of April, indicate a continuation of the upward trend started in March according to S. W. Straus and Co., New York City, building financiers.

There was a marked improvement in building construction activities over much of the country, the aggreegate estimated valuation on new work launched last month showing an increase over the March volume. Then, too, the April, 1929, volume was far in advance of that of the corresponding period a year ago, the gain being eighty per cent.

The activity in Indiana as a whole, and in the Indiana cities individually was not in line with the improvement noted in other localities, in fact, the state's volume was not sufficient to land her up among the leading twelve and Indianapolis slipped from the list of the twenty-five best building cities. The Iandiana figures for April, 1929, trailed both those for March, 1929, and April, 1928.

The Labor Situation

The steady if not rapid drift to the five-day week schedule in the building crafts is perhaps the most important current development in the industry. Chicago plasterers and painters are now on the five-day week basis, and St. Louis building trades are to a great extent on the short week plan. The policy of a five-day or 40-hour week is gaining headway on the Pacific Coast, especially in San Francisco, Portland and Seattle.

In New York City 12,000 bricklayers went on the five-day week schedule recently, and similar agreements had been worked out for the 150,000 building craftsmen in New York and immediate suburbs to become effective August 29, 1929. Disagreements later arose, however, and at the moment the exact status of the short-week situation in New York is problematical.

It is estimated that the five-day week will add approximately 4 per cent to construction costs unless the extra cost can be offset by increased efficiency, which is improbable, although some savings will be effected through mechanical innovations and managerial shortcuts.

There are indications here and there of disquietude due to labor disagreements although the progress of the industry has as yet not been greatly impeded by these disturbing factors.

Building Materials

The building materials cost index remained unchanged during April. Slight reductions in the cost of starting materials were offset by strength and firmness in steel and lumber.

NOT A NEW THOUGHT, BUT A GOOD ONE, NEVERTHELESS

Business With Fellow Members

The foregoing article quoted herewith from the "Wolverine Builder" is worth repeating, which in plain, unmistakable language explains what an organization member can do to help his association by giving preference to his fellow members in letting of building work. It says:

"Should I, an association member, prefer fellow members in giving business?"

This question probably has been asked a thousand times. Some people contend that "those days are past and gone forever." They hold that competition is so keen that all preference goes by the boards. What is it they are right about? They probably are to a certain extent and the result is nothing to brag about. Our condition of competition is a fearful mess, perhaps "patronizing members" would help a bit. Nothing will build up the worth of an organization more, and surely if a member pays more money into an association, he should not back down on putting something else in which will make the value of his investment more.

Giving preference to members in business does not necessarily mean turning down others, or of foregoing any advantages which might be otherwise gained. Belonging to an association is not a final test of stability in any case, but you will always find stable men belonging to associations. Those men can be given a preference. When members begin giving preference to members, the whole plane of member integrity takes a jump upward.

But as they say, you can't get this done by letting the other fellow do it. You have to be a pioneer.

NO QUESTION ABOUT THIS

Too Often Are Such Members Nursed Along

The delinquent member in any organization is a liability and not an asset in any sense of the word. The sooner his name is dropped from the membership roster, the better off the association will be. The man who fails to meet his obligation for dues can do more harm than a dozen men who refrain from becoming affiliated with the association. The organization necessarily suffers because of its slowness in making the delinquent member pay up. Better to have the baker's dozen of good Indians than a legion of delinquents.

This 19 Story Apartment Building Was Built of Reinforced Concrete At a Saving of $50,238 Over Structural Steel Construction

DETROIT TOWERS, DETROIT, MICHIGAN
Architects Plans Prepared by
Walter W. Ahschlager, Chicago
Construction Work Performed by
Walbridge, Aldinger Company, Detroit

THE Detroit Towers is an example of the success that reinforced concrete has met with in the construction of tall buildings. By using a reinforced concrete frame instead of steel—$50,238.00 was saved on the erection cost of this building.

Not only was this building erected at a tremendous saving of expense, but it was put up in 163 days—from driving the first pile to completion of pouring the roof slab. In spite of the unusual and complicated shape of the building, the work went ahead with little delay. Unless bad weather prevented the floors were completed on the average of one every five days.

Although the Detroit Towers covers about 5,400 square feet of floor space per story—only eight interior columns were necessary. In addition, the base of the largest column is but 33 inches square.

AN EARLY INDIANA PAINTING CONTRACT

How They Did Things Ninety Years Ago

By LEE BURNS

One of the early hotels of Indianapolis was the Palmer House built in 1840-41 at the southeast corner of Washington and Illinois streets. Sulgrove in his history of Indianapolis, written nearly half a century ago, said that originally it was a two-story brick structure with a wooden story on top. It was built by Nathan B. Palmer, who was then the state treasurer, and opened and managed by John C. Parker, who had come from Charleston, Indiana.

The Palmer House became one of the leading hotels of the state. It was enlarged from time to time, and for many years was the Deemocratic headquarters. After the death of Mr. Palmer the name of the hotel was changed to the "Occidental."

The antiquarian has found among some old papers, the contract for painting the original building when it was erected in 1841. This should be of interest to architects and contractors of today. The contract provides for all painting inside and out but while specifying the number of coats for outside work, it leaves all inside work to the discrettion of the painter.

The owner was to furnish all material and to pay for all labor, including making the putty, three hundred and fifty dollars. As part of this amount the painters were to accept a lot at the corner of Market and Blackford streets where a church now stands at two hundred and thirty-five dollars and were to receive half of the remainder in store goods including a marketing order on a butcher. The contract follows in full:

Memorandum of an agreement made and concluded the first day of June, eighteen hundred and forty-one between Nathan B. Palmer of Indianapolis of the one part and Newton Norwood and George D. Statts trading under the firm of Norwood & Statts in the house painting business of the same place of the other part. Witnesseth as follows, to-wit: That for the consideration hereafter mentioned the said Norwood & Statts, do and by these presents do hereby engage and agree that they will to the best of their skill and abilities and in a neat and workman like manner do and perform all the painting necessary to be done, both externally and internally, to the building now erecting by said Palmer on lot No. 6, in square No. 66, in the town of Indianapolis, embracing all of said building and which will (on reference) be found more particularly described in an article of agreement now existing between the said Palmer and Gaby & Knowlton—all the brick work fronting on Washington and Illinois streets including all sides of the chimney tops to be painted two good and sufficient coats—and all external woodwork of all parts of the building to be painted three good and sufficient coats—all glazing throughout the building to be done in the usual manner and when necessary the glass to be bedded. The putty to be made by the said Norwood & Statts from materials to be furnished them by the said N. B. Palmer—and in consideration whereof the said N. B. Palmer herein engages and agrees to furnish all necessary materials and pay to the said Norwood & Statts the sum of three hundred and fifty dollars as follows, to-wit: Lot No. 13 in outblock No. 147—of the late addition to the town of Indianapolis at the price of two hundred and thirty-five dollars—the half of the remainder in store good including an order for twenty-five dollars worth of marketing on Philip Michael (butcher) and to be paid as the work progresses—the balance to be paid in cash on the first of March, 1842.—It is also agreed that, if, at the completion of the work above specified the said Palmer shall have on hand an overplus of paints and oil for which he shall have no further use, the said Norwood & Statts are to take them at their cost price and which shall be deducted from the cash payment stipulated as above to be paid on the first of March, 1842.

NOT ONLY WASHINGTON BUT MANY OTHER PLACES ALSO AFFLICTED

President Hoover Shows His Appreciation of Architecture

In a recent address President Hoover lamented the bad architecture which has made so many "eye-sores" among the public buildings of Washington. He pleaded for buildings that express "not only the traditions of the past but the greatness of the future." He hopes that in the great public building program authorized by Congress there will be a return to the simple, graceful, dignified Colonial style.

He criticizes especially one important building in Washington, which he called "an architectural orgy." It was modeled originally after the Treasury building, with its "sound classic lines." But somebody in authority in that day preferred gorgeousness, and covered the structure with a lot of cupolas and other ornamental rubbish. The building may still be redeemed, the President thinks, by removing those superfluous and incongruous ornaments.

Many old houses and much old furniture, almost everywhere, could be redeemed for good taste by the same simple process of taking things off.

o'clock noon, Monday, June 3d. For a reinforced concrete foundation for chimney, boiler and turbine-generator unit for extension of the power plant of the Indiana University hospitals at Indianapolis.

***Bank Building** (addition and remodeling): $25,000.00, 2-stys. and bas., addition, 18x50, North Vernon. Archt., Fermor S. Cannon, 21 Virginia avenue, Indianapolis. Owner, First National Bank, E. H. Lange, cashier, North Vernon. Owner will build and award all contracts.

STEEL INSURES STRENGTH AND SECURITY

Steel Supports the Carillon

From the magnificent Baxter carillon of the Scottish Rite Cathedral in Indianapolis, magic melodies charm the ears of listening thousands. Structural steel plays an all-important part in this public benefaction, for without the tremendous structural steel truss from which the carillon depends, this musical masterpiece might not have been possible. Here again, steel has been a definite aid to progress.

KOEHRING

One Man, End Control — places operator where he easily sees every man working about the mixer—sees the *loading* of the charging skip, sees the *discharging* of the concrete!

— within his easy reach are water control, skip hoist, discharge chute and engine clutch safety knockout levers!

This in itself is a surprising factor of faster operation and a greater day's yardage!

Here's your all-'round mixer — the 14-S — not too large for smaller work, and big enough for average buildings, bridges, etc.! Capacity range 2 bags 1-3-6 to 4 bags 1-1½-3!

The Koehring 14-S Construction Mixer has high speed, clean, swift, charging and discharging! Know Koehring Heavy Duty construction! *Know the Koehring!*

. . .

FROM *whom* you buy your equipment is almost as important as *what* equipment you buy! You get a continuing interest and service with equipment you buy through this organization which appreciates that time is money for you.

Write, phone or wire for literature

SIZES

Pavers — 27-E six cylinder Waukesha engine, automatic operations. 13-E four cylinder Waukesha engine. Comply with A. G. C. standards

Subgrade Planers — Built for all types of roadway, 8' to 27' widths; attachable to 27-E Paver.

Construction Mixers 14-S, 21-S, 28-S. Trucks or skids; rubber tires optional. 28-S skids only. Weigh Mix attachments on 14-S. Comply with A. G. C. standards.

Dandie Mixers -5-S, 7-S, 10-S. 5-S single or four cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

Louisville, Ky.

Sealed Proposals

SCHOOL HOUSE
NOTICE TO BIDDERS AND CONTRACTORS

Notice is hereby given, that on the 19th day of June, 1929, at the Lodge Avenue School, at the intersection of Lodge avenue and Green River road, in Knight township, of Vanderburgh county, Indiana, that the undersigned trustee of Knight school township, Vanderburgh county, Indiana, in conjunction with the advisory board of said township, will receive sealed bids for the furnishing of all labor and material for the construction of a one (1) story brick school, as an addition to the Vogel school located on Oak Hill road, in said township, and will receive sealed bids for the construction of a portable school to be located at the Lodge avenue school, at Lodge avenue and Green River road, in said township, in accordance with the plans and specifications now on file in the office of said trustee, whose address is Pollack avenue, R. R. 9, Evansville, Indiana, and in the office of Harry E. Boyle, architect, Furniture building, Evansville, Indiana.

Sealed bids will be received up to 7:30 o'clock p. m. on the said 19th day of June, 1929.

The estimated cost of the addition to said Vogel school is twelve thousand five hundred dollars ($12,500.00). The estimated cost of the portable school to be located at Lodge avenue school is three thousand five hundred dollars ($3,500.00).

Said trustee in conjunction with said advisory board will examine said bids and award the contracts for said construction to the lowest and best bidder or bidders, and the successful bidder or bidders will be required to enter into a written contract with the said school trustee for the furnishing of all labor and material for the construction of said buildings, in accordance with the plans and specifications, and to give bond with surety to be approved by the said school trustee, for the faithful performance of said contracts.

Each bidder will be required to submit a certified check, in an amount equal to three per cent (3%) of the bid submitted, said check or checks to be forfeited to the township trustee in the event the successful bidder or bidders refuse or fail to enter into a proper contract and to furnish proper surety.

The township school trustee and the advisory board hereby reserve the right to reject any and all bids.

Dated this 23d day of May, 1929.

HENRY HENSZ,
Trustee of Knight school township,
Vanderburgh county, Indiana.
Arthur C. Stone,
Attorney for Trustee.
May 25.

conform to the laws of the state of Indiana and to the rules and regulations of any governing state board of the state of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble school township, Shelby county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware street, Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

ALFRED C. HOWE, Trustee.
GEORGE GREGORY,
CHRIS REGER,
CLAUDE SHAW,
Advisory board.
Wray & Sullivan, Attorneys.
May 18-25—June 1

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Trustees of the Indiana School for the Blind, Indianapolis, Indiana, at the office of the Board, in the present building, located at North and Pennsylvania streets, Indianapolis, Indiana, until 2:00 o'clock p. m., June 5, 1929, for the completion of the Indiana School for the Blind on the site at 75th street and College avenue, Indianapolis, Indiana, in accordance with the plans and specifications prepared by and under the supervision of Harrison and Turnock, Architects and Engineers, 500 Board of Trade Building, Indianapolis, Indiana, said plans now being on file in the office of the Board of Trustees of the Indiana School for the Blind, the Indiana State Board of Accounts, State House, Indianapolis, and in the office of the Architects and Engineers.

Separate bids will be received upon General, Heating, Plumbing, and Electrical work.

All bids must be submitted on Blank Form No. 96 as prescribed by the Indiana State Board of Accounts.

Copies of plans and specifications may be secured by contractors at the offices of the Architects and Engineers, upon deposit of a check made payable to the order of said Architects and Engineers, for the sum of Twenty-five ($25.00) Dollars, as surety for the return of the plans and specifications to the office of said Architects and Engineers in good condition.

The right is reserved by the Board to reject any and all proposals.

By order of
THE BOARD OF TRUSTEES,

"B60" Series Hot Blast Smokeless Boiler

Patent Pending

Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

STATE A. B. C. EXECUTIVE BOARD SEEKS TO INJECT MORE AGGRESSIVE POLICY INTO THE ORGANIZATION

Important Session Held At Indianapolis Last Week

Building contractors from eleven Indiana cities, members of the Executive Committee of the Associated Building Contractors of Indiana, met recently at Indianapolis, in a regular board session to discuss important association matters, local cities might be made more effectual through increased activities along more map out policies and plan for the year's activities, all of which will have an important bearing on the future of the organization.

A general survey of local organization activities and conditions led to quite a discussion and brought forth many interesting points on how association effort in aggressive lines. It was generally urged that means be taken to build up the State A. B. C. membership by instituting attractive functional programs that would appeal to the builders and prove to the latter the worth of the association and persona lcontact.

The hope was expressed that a reawakened spirit of aggressiveness would result in a considerably increased membership throughout the state when reports are made on this score at the next annual convention in January.

As for the convention, the Board members voted that it be held January 21 and 22, at Evansville, Ind. The convention was originally scheduled for Vincennes, but owing to certain local conditions, Sam L. Kirk, representing the Vincennes builders, asked the State A. B. C. if it would not be possible to transfer the annual meeting to some other city in 1930, and some other year hold it at Vincennes. Mat Hallenberger, general contractor, of Evansville, at once extended an invitation to the State Association to meet in that city, an offer that was unanimously accepted by the Executive Committee.

The attention of those present was called to the recent death of the wife of Harry A. Fenton, general counsel for the State A. B. C., and a resolution was adopted expressing deep and sincere sympathy of the members of the State Association for Mr. Fenton at the loss he had sustained, and assuring him that the news of his bereavement had caused a distinct shock amongst the builders of Indiana, with whom he had worked so faithfully for many years.

Just previous to adjournment the Executive Committee took cognizance of the Building Congress and Trade Show to be held at the State Fair Grounds, Indianapolis, October 21 to 26, inclusive, and endorsed the event with the following resolution:

"WHEREAS, The purpose of this Congress and Trade Show is to bring under one roof, materials, tools and equipment of all kinds used in the construction of Buildings and Homes. This Exposition will be one of the highest class possible, and equally beneficial and educational to those who are engaged in the Building Industry, the Exhibitors and the public in general, all of whom will be cordially invited to attend by invitations exchangeable for season passes, and

WHEREAS, The exhibitor of such matetrials, tools and equipment will be advantageous to the exhibitor and the prospective customers, as it will provide an opportunity to meet on mutual terms and to discuss the merits of such products needed and used in modern Building Construction, and

WHEREAS, As a constituent group of the Indiana Building Congress, we believe the merits of such a Congress and Trade Show is an advanced step in constructive activities and tends toward cooperation by bringing together all elements of the Building Industry for a frank discussion of the various problems entering into Building Construction.

THEREFORE, be it Rsolved; that the Executive Board of the Associated Building Contractors of Indiana, do hereby endorse the action of the Indiana Building Congress and will lend their aid, and recommend that all Contractors in Indiana lend their support in making this Congress and Trade Show a success."

Those present at the board meeting were: Ross Eshelman, Anderson; J. E. Elliott, Mat Hallenberger, A. H. Meyer, Evansville; George Schack, Albert Weinman, Ft. Wayne; E. E. Cole, Hammond; James Rybolt, John H. Owens, Indianapolis; Elmer Danner, George Simpson, Kokomo; Jacob Evans, A. E. Kemmer, Lafayette; H. H. Herbert, Michigan City; Charles Morrow, Muncie; Frank Burge, Terre Haute; H. L. Abernathy, Sam L. Kirk, Vincennes.

UNIVERSITY PRESIDENT TALKS ON BRITISH LABOR MOVEMENT

Members of Indianapolis Building Congress Hear Dr. Oxnam of DePauw

One of the outstanding features of the effort put forth by the Indianapolis Building Congress during the past has been its ability to present to its members at regular meetings prominent men from various walks of life who have had real messages to deliver, messages latent with interest for builders.

As an example of the earnestness of the Congress to enlighten its members was the introduction of Dr. G. Bromley Oxnam, President of DePauw University, Greencastle, Ind., who at the regular monthly meeting last week reviewed the labor movement in Great Britain in a most interesting manner.

The speaker outlined the steps by which the trade unions in Great Britain have advanced. "The labor union is defined in law in Great Britain but not over here," he said. "The American labor movement leadership has suffered because when our labor leaders have become capable they step out of the labor ranks into employers. We have taken leadership out of the movement and we have not received justice from the courts as they do in England.

"American labor has been responsible

Boulevard Apartment, Washington, D. C. Architect: Philip M. Julian. General Contractors: Boyle - Robertson Construction Co.

Averaging a Story Every 8 Days With Institute Reinforcing Steel *In This Reinforced Concrete Building*

THE "Boulevard Apartment," Wahington, D. C., is 9 stories high, and covers about 23,000 square feet of ground. Institute Reinforcing Steel helped to build it at tremendous speed.

The 9 slabs were formed and poured in 73 working days. There was no overtime. The first floor and roof took 10 to 14 days respectively. The remaining 7 floors were completed in 49 days.

Some of the reasons for such speed are plain. Institute Steel bundles are easily handled by two men, and plainly tagged for location. Handling and placing is faster.

All Institute Steel is cut, bent, and completely fabricated before delivery. All deliveries are made on schedule. There is no waiting, no storage, the steel is taken directly from the trucks to the forms.

Because this speed is possible, is another reason why reinforced concrete buildings cost less.

And remember! A "story" of reinforced concrete is a complete story, not a skeleton to which reinforced concrete floors and fireproofing are are still to be added.

ENCOURAGEMENT EXTENDED TO INDIANA ARCHITECTURAL DRAFTSMEN

State Society of Architects Launches a New Scheme

The pencil sketches made by Indiana draftsmen that were shown at the Annual Architectural Exhibit at the John Herron Art Institute aroused so much interest that the directors of the Society have decided to make this a feature of the next exhbiit .

Sketching is a delightful avocation that affords excellent training to an architect, and every part of our state contains many interesting subjects. It has been decided to award at the next annual exhibit in February, 1930,

The President's Prize

given by Mr. George W. Allen, architectural books valued at $25.00, to be selected by the prize winner, for the best sketch of an architectural subject made in the state during the year 1929 by any draftsman connected with the office of a member of the Indiana Society of Architects. In addition there will be a second award of $10.00 in books and honorable mention for other skitches.

A Wealth of Subjects From Which to Pick

Scattered over the state are many appealing old buildings, some of them of historic interest, that should be shown at our exhibition and preserved in the sketch books of our draftsmen. Such subjects as an old doorway, a village church, a picturesque far mhouse, or an interesting interior detail are all eligible for this award. In some of the early Indiana buildings are details of such merit that measured drawings might well be made.

It is hoped that these sketches of Indiana subjects will be an outstanding feature of the next exhibit. While no restriction is placed upon size, it is suggested that for uniformity of display, the sketches should be on paper about 12x15 inches or mounted to approximately that size.

Plenty of Time Available

Every day in the year is good sketching weather and any number of sketches may be submitted. Let us hope that every draftsman will fill his portfolio before the end of the season, have a delightful experience in discovering and recording good bits of Indiana architecture, and be ready to help make this exhibit a great success.

(Continued from Page 1)

for the shortening of the working hours, the adjustment of wage rates to meet the economical demands of the time and the direction of education into the proper channels.

"There were three reasons why the British labor movement came into power in 1924 and three reasons why they will come to power. The British labor leader is better advised on wordly affairs than the American labor leader. They are better advised on the kind of industrial problems they have to cope with and they are fired by religious idealism."

Dr. Oxnam said that the English labor leaders of today are disciples of the doctrine and teaching of John Wesley, who laid the foundation for the individual education and public speaking of the working people. In the days of Wesley every English labor leader was a Methodist preacher.

"The employers in England have gotten over the idea of crushing out unions," he continued. "The trade unions have not only organized the workers, who are called producers, but they have also gone a step further and organized the consumers into organizations known as co-operative societies. The citizens are organized as citizens, thus the great British labor party was born. This party assumed power in 1924 under the leadership of Ramsey McDonald, Arthur Henderson and men of that kind. The great universities of Oxford and Cambridge have enrolled representatives of this labor group who are finding out through education the proper scientific methods of government.

"Ameriacn labor picks the candidate for office on his favorableness to labor and they have to depend on the individual whose reactions after office may be quite the other way around. You have to got on a basis of idealism to get anywhere." The British labor movement has four major ideals, one of which is a uniform minimum standard of life. This, as explained by Dr. Oxnam, is a minimum standard of housing. Another ideal is a scheme of taxation which would necessitate the profiteers of war time helping to reduce the war debt. They are looking forward to the surplus wealth of the country accrueing to the common good. They will pay the present owners of mines for their property and these mines will be owned by the people of Great Britain, not to be inherited. "I do not believe this will solve the industrial problem. You can not solve a local problem in England when you are facing problems of competition outside. If you can see that all industrial problems are scientific problems we can look to a better industrial order in America without difficulty.

"We need to work out our industrial problems in the manner in which your organization is working out its problems."

STEEL INSURES STRENGTH AND SECURITY

Structural Steel frames the Drive-Away Garage of the Studebaker Corporation, South Bend, Ind. fabricated and erected by the Indiana Bridge Co., Muncie, Ind.

BUILD WITH SPEED

Structural steel is not only the strongest, safest and most thoroughly reliable of all building materials . . . it has the great added advantage of providing the most rapid means of construction. Nowadays, more than ever, time means money. The sooner a structure is finished the quicker it begins to pay dividends – delays in erection mean more interest charges and lost rentals.

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

n unusual and interesting application of Structural Steel is found in the Producer Building and Gas Flue the Hoit Glass Co., Dunkirk, Ind. Steel fabricated and erected by the Indiana Bridge Co., Muncie, Ind.

—BUILD WITH *STEEL*

Steel saves time because it comes to the job ready to go into place — immediately. All its characteristics are known. It can be used anywhere with complete confidence. Wherever construction calls for speed—and where doesn't it?—you see steel serving with utmost expedition. Steel construction is the most efficient—most modern—type of construction for every kind of building from skyscraper to dwelling.

Sealed Proposals

NOTICE OF SALE OF BONDS

Notice is hereby given that on the 18th day of June, 1929, at 1:30 o'clock p. m., at the office of the Township High School, in the Town of Bippus, in Huntington county, Indiana, the undersigned, Warren School Township, by its School Trustee and Advisory Board, will offer for sale and will sell the bonds of said School Township, to the highest and best bidder therefor, in the total aggregate par value of Thirty Thousand ($30,000.00) Dollars, as follows, to wit: Said bonds are all dated May 15th, 1929, and are to consist of sixty bonds of the par value of $500.00 each and shall be divided into fifteen equal series of four bonds each. The first series consisting of four of said bonds shall become due July 1st, 1930; the second series shall become due July 1st, 1931, and so on theerafter, four of said bonds to fall due on the first day of July of each succeeding year until all of said bonds become due and payable.

Said bonds shall bear interest at the rate of five (5) per cent per annum, payable semi-annually on the first days of January and July of each year and said bonds and interest thereon shall be negotiable and payable at the First National Bank in the City of Huntington, State of Indiana, and the interest coupons shall be attached to each of said bonds evidencing the interest thereon. The purpose of said bonds is to provide funds necessary to repair and construct buildings and structures for school purposes for said township consisting of school rooms and a gymnasium for educational and recreational purposes.

Sealed bids will be received by the undersigned and the same must be submitted in writing on or before 1:30 o'clock p. m., on said day and each bid must be accompanied by a certified check, payable to Clarence Huffman as School Trustee of Warren Township, in a sum not less than One Thousand ($1,000.00) Dollars, and on condition that said sum shall be forfeited to said School Township as liquidated and agreed damages on failure of such bidder to receive and pay for said bonds on acceptance of such bid, subject however to a reasonable time allowed for examination of an abstract of proceedings preliminary to the issue of said bonds.

The undersigned reserves the right to reject any and all bids.

Done this 8th day of May, 1929.

CLARENCE HUFFMAN,
As School Trustee, Warren School Township of Huntington County, Indiana.
THOMAS H. POWELL,
GEORGE KNECHT,
SIMON KITT,
As members of Warren Township Advisory Board.

June 1.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that as Trustees of Steuben Township, Steuben County, Indiana, the undersigned will receive sealed bids up to the hour of 10 o'clock in the forenoon of June 20, 1929, at the First State Bank of Pleasant Lake, Indiana, and will let to the lowest responsible bidder the contracts and jobs for the erection of the Public School building, plumbing and heating of the same and the electric wiring thereof, all in full compliance and accord with the plans, profiles and specifications therefor prepared by Omer P. Gordon, Architect, and on file in my office in said Village of Pleasant Lake and at the office of said Architect at Greenfield, Indiana, and also at the office of the State Board of Accounts at Indianapolis, Indiana. All bids must be accompanied by the statement under oath required by the provisions of the Act of the General Assembly of Indiana, approved March 16, 1929, and also by a certified check equal to 10% of the amount of such bid or by a personal or surety company bond in the sum equal to the amount of the bid, subject to the approval of the said trustee and the advisory board of said township. Said bond shall be conditioned for the faithful performance of the said work and contract, the sureties on a personal bond shall be resident, responsible freeholders of the State of Indiana, at least one of whom shall be resident of said county, said bond or certified check shall be for the benefit of any person or persons or corporation who shall suffer loss or damage by reason of any such bidder failing or neglecting to enter into any contract awarded on bid or to carry out the same in any particular. Each contractor shall submit with his bid his affidavit of non-collusion with any other bidder as required by law. The right is hereby reserved to reject any or all bids.

E. F. SMITH,
Trustee of Steuben School Township.

June 1-8.

SCHOOL BUILDING
NOTICE TO CONTRACTORS

Notice is hereby given that the trustee and advisory board of Noble township Shelby county, Indiana, will receive bids at the office of the township trustee Geneva, Indiana, until 1 o'clock p. m., of Monday, June 10, 1929, for the erection and completion of the general construction of a one-story grade school building to be erected on a site near Geneva, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building, in accordance with the plans and specifications prepared therefor by Norman H. Hill, architect, and adopted by the trustee and advisory board, said plans and specifications now being on file in the office of the trustee, the architect and the state board of accounts. The estimated cost of such work is $42,000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the state board of accounts and sealed and in every respect must conform to the laws of the state of Indiana and to the rules and regulations of any governing state board of the state of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble school township, Shelby county, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into a contract and execute a surety bond for the full amount of his bid, approved by the trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the school township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware street, Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

ALFRED C. HOWE, Trustee.
GEORGE GREGORY,
CHRIS REGER,
CLAUDE SHAW,
Advisory board.
Wray & Sullivan, Attorneys.
May 18-25—June 1

SCHOOL BUILDING
NOTICE TO CONTRACTORS

Notice is hereby given that on the 18th day of June, 1929, at 12:00 o'clock noon, at the office of the Township High School, in the town of Bippus, in Huntington county, Indiana, the undersigned Warren School Township, by its duly constituted School Trustee and Township Advisory Board, will receive sealed bids and will let a contract to the lowest and most responsible bidder for the furnishing of all materials and all labor to the construction of additions and alterations of the existing school building and for the erection of a gymnasium for educational and recreational purposes, and all in strict accordiance with the plans and specifications heretofore adopted for that purpose by the undersigned.

At the same time and place, the undersigned will receive separate bids for the heating and ventilating of said building; also for the plumbing and drainage thereof; and also for the electric wiring and fixtures therefor and all in accordance with said plans and specifications.

The said bids on the general contract must be accompanied by a certified check for One Thousand ($1000.00) Dollars payable to Clarence Huffman as School Trustee. Each bid on the heating and ventilating; on the electric wiring and fixtures; and on the plumbing and drainage, shall be also accompanied by a certified check for Five Hundred ($500.00) Dollars, likewise payable to said School Trustee, and on condition that the said checks shall be forfeited to said School Township as agreed and liquidated damages, by the successful bidder who fails to enter a contract and execute and deliver an adequate and acceptable bond for the faithful performance thereof on acceptance of bids submitted, by the undersigned.

Plans and specifications for all said buildings, structures and equipment herein referred to are now on file and open to inspection at the following places, to wit: the office of the undersigned School Trustee in said town of Bippus; the office of the State Board of Accounts in the State House, Indianapolis, Indiana; and in the office of R. W. Stevens, architect, in the Citizens State Bank Building in the city of Huntington, Indiana.

Copies of said plans and specifications may be obtained from the office of R. W. Stevens, architect, Suite 9, Citizens Bank Building, Huntington, Indiana, upon deposit of $25.00 for each set. Said deposit will be returned to the bidder upon safe return of said plans and specifications to the architect's office on or before the day and hour set for receiving said bids. Should the bidders fail to return said plans on said date and time, he or they shall forfeit said deposit.

The estimated cost of said building and alterations and all said work complete as provided in said plans is $27,500.00.

Said building designated as gymnasium shall consist of a new structure built adjacent to the existing school building and shall be 69 feet and 6 inches wide and 94 feet long, the walls thereof to be of hollow tile and faced with brick and to be 25 feet high from grade to ceiling.

The roof shall be a three-ply composition asphalt roof, supported by steel trusses and girders.

The existing building to be remodeled by converting the existing auditorium into three calss rooms and all as more particularly set out and described in said plans, specifications and drawings of said Architect.

All bids must be in writing and in con-State Board of Accounts and the laws of the State of Indiana.

The undersigned hereby expressly reserves the right to use reasonable time to investigate the bids and qualifications of biddrs and also reserve the right to reject any and all bids.

Done this ------ day of May, 1929.

CLARENCE A. HUFFMAN,
As School Trustee of Warren School Township, Huntington County, Indiana.
THOMAS H. POWELL,
GEORGE KNECHT,
SIMON KITT,
As members of Township Advisory Board, Warren Township, Huntington County, Indiana.

There's no limit to the need for MODERN PARKING GARAGES

IF YOU'VE yet to build a MODERN GARAGE or have ever been tempted to think "we don't need another garage," consider this:—

There are now in Cincinnati twelve (12) d'Humy Motoramp parking garages in operation, and one (1) more planned for early construction. And Cincinnati will not be over-garaged.

Intelligent application of curb-parking restrictions when, as and where indoor (garage) parking has been made available has justified this development of modern parking garages.

The same thing will happen in cities, everywhere, for parking garages are a fundamental economic need. Saturation in the field of parking garages is years ahead.

THE BUILDING CODE COVERS MORE THAN MERELY STRUCTURAL SAFETY

Its Purpose, Elements and Preparation

By RUDOLPH P. MILLER,

Past Pres., Building Officials' Conference

Architects, builders and engineers generally think of a building code as a form of specification for safe construction. Structural safety, however, is only one of a number of important phases of a building code. Historically it is not even the first or most important. Building codes originated in ordinances safeguarding buildings against fire. The important matters that must be dealt with in a building code, besides structural safety, are safety against fire, proper sanitation, adequate exit facilities, besides a number of other related matters such as chimneys and flues, installation of heating appliances. Many codes cover the matter of elevators and electrical control. Some of them include plumbing and smoke abatement. An exceedingly important element of a proper code is effective administration. As is evident the formulation of a code is a matter requiring knowledge and experience beyond building construction, which in itself requires a broad treatment so that there will be a proper balancing of the provisions dealing with the use of different materials.

The tendency to make of a building code a specification for the use of different building materials and their combination into the resultant structure, is contrary to the principle of the police power under which the construction of buildings is regulated by the state or one of its subsidiary political divisions. The safeguarding of the public health, safety and general welfare does not necessarily require a specification. The fact is that when a code is made a specification it is an obstacle to the general welfare. It hampers new development by depriving the general public of what may be not only as safe but perhaps even better and more economical in construction. It tends to fix low standards. It lacks the flexibility that is necessary for the best development. The building code should prescribe the purposes to be accomplished and only in so far as it is necessary because of possible differences as to what may be safe, should it designate the method to be followed.

Inasmuch as a failure to comply with a building code is made a crime, though a minor one, by statute, it cannot reasonably require anything more than the minimum of safety. Furthermore, it is in the interest of the public that a building code does not require more than is necessary for public safety. While economy in building construction is not one of the functions of a building code, incidentally it does result from a well written code, in that it does not compel higher standards than the particular conditions under which a building is constructed justify.

It is evident that the preparation of an adequate building code should be under the control of competent persons. It is not done by copying or revamping some existing code by well intentioned persons who may lack the essential, exact knowledge previously described. This important work must be entrusted only to those who possess the requisite technical knowledge and who have no financial interest in the promotion of any material or method of construction. An intimate knowledge of the practical administration of building codes acquired either by close observation and study or by actual experience is essential.

The enactment of an inadequate building code is detrimental to the public welfare in all of its phases. The results are so important that a municipality seeking a building code should provide adequate means for competent services and necessary expenses incurred in its preparation.

THE CONSTRUCTION SURVEY CONTRACT

A Remedy Advocated to Take the Risk Out of Building

G. SZMAK

Economist, Bridgeport, Conn.

A good deal has been said and written about the irresponsible buyer and seller of construction. This fact not only indicates a problem, but also the urgent need of a solution. While it is impossible to entirely eliminate unfair practices, yet, it is very easy to increase fairness by encouragement. Catch phrases, slogans and co-operative movements to improve ethics, however, do not increase fairness while inefficient or degenerated methods of transacting business remain in use.

Through research in the field of contracting better methods are continually being developed to improve the equity between buyer and seller. This advance is made by utilizing the merits and scraping the demerits of the present forms of contract.

Although used extensively, it is continually proven by fact that lump-sum contracts do not protect either buyer or seller. Which one gains or loses is a matter of more or less conscience as the information upon which lump-sum contracts are usually based is not sufficiently positive to afford full protection. Thus extras are the rule rather than the exception under this form of contract.

The cost plus contract is another form that has been used by some of the larger buyers of construction. This method has at least one distinct advantage. It eliminates the entire risk of the seller while the buyer assumes payment for all material and labor required to erect the structure plus a definite percentage fee for contractor's management and profit. The sell-

LOST OPPORTUNITIES

By MERRITT HARRISON, Past Pres., Indiana Society of Architects

Harry Emerson Fosdick, in the May issue of the American, states in his article "America's Biggest Problem"—

"Restrictive laws will not solve our problems. Endless legislative don'ts are hardly a palliative, much less a cure. The American citizen's own sense of responsibility in handling the power committed to him must issue self-imposed codes of behavior which the individual will accept for himself and the separate businesses and professions encourage and support. The building up of codes of honor within special occupations and trades is one of the most thrilling events in man's moral history. . . . . Helping to build up such standards of honorable procedure in our professions and businesses is one of the most necessary and useful contributions that anyone can make to this generation.

". . . . . Today, when so often our public morals seem to be slipping, these standards of honorable behavior in our businesses and professions, like sheet-anchors to the windward, are among the finest elements in American life. They need to be strengthened and improved. They are going to face more strain than ever yet has been put upon them. America's economic history has been a succession of graduations to new levels of financial ability. We are like a child that has moved on from a baby carriage to a kiddie-car; from that to a bicycle; from that to an automobile; from that to an airplane. The process is very stimulating. The possibilities are great. But the result will be disastrous unless each new increment of energy to be controlled is matched by an increased steadiness of head."

What part is the architect playing in this great game of life? As a member of one of the honored professions a code of practice is set before him for his guidance, but too often he slips and endeavors to "get by," only to find out in the end that the code of practice set up by years and years of experience of those who have preceded him, is the best guide to follow if he desires ultimate success and not just momentary advancement.

The protection of these codes of practice by requiring all who claim to be following them to qualify, to register and to actually practice them or drop by the wayside, is a step forward towards better morals in our American life. The architect's responsibility is great in this direction, because of the trust that is placed in him of men's lives and the their financial resources. But these codes of practice, in the architectural profession, should be strengthened and improved.

Because of his lack of foresight concerning his own affairs, the architect has allowed deep inroads into his professional practice to the detriment of not only his profession but the public as well. The general opinion that he is but a dreamer, impractical and not a business man, is the architect's own fault. He gives cause to this undesirable criticism too often by not preparing himself thoroughly at college as an engineer, fully acquainted with all the basic principles of mechanics that apply to buildings. Too many times higher mathematics is eliminated from his studies.

After college his apprenticeship in the best architects' offices is all too short. And his travels are restricted. He does not continue to improve the fleeting moments by continuously adding to his knowledge by studies in economics, law, business, which he no doubt was unable to acquire at college. Costs are not primary, but secondary with him. Three essentials: accurate drawings and specifications fully complete; unassailable costs; and work well done, he seems to miss. And as a business man he wholly misses the standards generally accepted by such men. And yet the architect leads in many respects the thought and advancement of the physical welfare of his community.

Indiana has taken steps towards better architectural service by enacting at the last session of the legislature a registration law for those who profess to practice as architects in this state. It is now incumbent upon the profession to make this law a success. It cannot be enforced except by the profession itself. The machinery is set up. Opportunity is granted. Now what are we going to do? Sell our birthright for a mess of pottage or make good. Let's go!

SOUTH BEND HAS A NEW ARCHITECTURAL FIRM

Two Notre Dame Professors Enter the Practice

A new architectural firm was recently launched at South Bend, Ind., by O. C. Brubaker and V. Fagan who have established offices at 209 Poledor building.

SURVEY CONTRACT

(Continued from Page 3)

er's risk having been eliminated, the contractor is free to concentrate upon producing a good piece of work. Unfortunately, or otherwise, not every buyer is willing or can afford to pay for construction at an indefinite price.

A third and more recent form is the construction survey contract which is universal for the reason that it eliminates the risk of both buyer and seller. This form of contract is based upon a construction survey which reveals in advance the exact quantity, quality and price of each part of the structure so that the entire transaction is open for examination at all times. Under this method the buyer is enabled to know precisely the cost of each item in advance. compare the cost of a certain item by different bidders and also the cost of one item against another to determine the most economical construction that is suitable.

The total actual cost of the project is determined more positively under this method than any other because every survey contract is supported by a preliminary estimate prepared by the construction surveyor as well as by the contractors' final estimates.

MORE ALONG SIMPLIFICATION LINES

Wonder If Cash and Carry Is Included in the Scheme

Home financing plans are many and varied, but a recent bulletin of the United States Department of Commerce reports a new one, as follows:

A furniture and rug company in a large Midwest city is reported in the Retail Ledger to sell homes as well as home furnishings on the installment plan, financing the building and requiring only that the purchaser own the lot on which it is to be erected, provide good credit references, and establish his ability to meet the payments.

No large initial payment is required. 60 monthly payments paying off all building costs, financing charges, cost of surveys, title search, fire insurance, and furniture cost, except for a first mortgage of approximately 50 per cent of the value of the building and real estate. The monthly payments provide a sufficient margin to enable the customer at the end of the period to renew the first mortgage if desired. No extras are added to the price originally quoted.

The store has had an architectural department and a sales force which devotes its entire time to selling homes. A salesman from the regular furniture department sells the furnishings, the terms of sale stipulating that furnishings amounting to a minimum of 15 per cent of the cost of the home must be purchased at the store. Results are reported very satisfactory, so far, although the plan has been in operation only a few months.—Indianapolis Realtor.

STAFF OF THE INDIANAPOLIS BUILDING INSPECTION DEPARTMENT

This is the official crew who seek to assure to the citizens of Indiana's Capital City safe buildings. It is their duty each year to check and pass upon the structural and sanitary merits of all new building construction work launched, representing investments that approximate many millions of dollars.

Back row: G. R. Davis, Clerk; J. M. Henry, Structural Engineer; J. MacGregor, Jr., Elevator Inspector; M. T. Clark, Building Inspector; W. C. Christena, Building Inspector.

Middle row: F. Hougham, Sign Inspector; J. W. Shaw, Building Inspector; F. C. Barton, Combustion Engineer; T. J. Schory, Chief Clerk; M. Weaver, Chief Building Inspector.

Bottom row: F. E. Hansing, Zoning Clerk; Margaret Kern, Secretary; T. D. Lee, Assistant Commissioner of Buildings; W. F. Hurd, Commissioner of Buildings; Clara Oxley, Statistician; J. Glazier, Building Inspector.

NEWS OF THE WEEK

The asterisk (*) prefix to an item indicates additional information to report published in previous issue.

INDIANAPOLIS

***School Buildings** (4 dormitory buildings and superintendent's residence): $425,000.00, (appropriation for all work described herein), 75th street and College avenue, Indianapolis. Archt., Harrison and Turnock, 500 Board of Trade Bldg., Indianapolis. Owner, Indiana State School for the Blind, George S. Wilson, superintendent, 40 East North street, Indianapolis. STEEL INSURES STRENGTH AND SECURITY

Massive strength for years of service is gained by using structural steel in this highway bridge at Gloverport, Ky. Steel fabricated and erected by Pan-American Bridge Co., Newcastle, Indiana.

Steel Is Fool-Proof.. It Withstands Abuse

Engineers' and architects' specifications frequently stipulate that material shall be protected from injury prior to acceptance at the site of erection. In most instances this requirement is important. In the case of structural steel, only the severest kind of accident need be considered.

Steel members have been dropped from high elevations, or have been subjected to ship or train wreck during transit, and yet have suffered no damage. Unless a member be visibly distorted, it can be relied upon for its full duty.

Steel may be stored without protection during erection of a bridge or building. Nothing more than surface cleaning is necessary to restore it to the condition in which it left the plant.

It is a recognized fact that after steel has been properly inspected at its point of origin, the eye is the only instrument needed to determine its complete reliability.

KOEHRING

Speed Begins at Control Levers

Easy-shifting levers that shift clutches with no loss of the "feel" of the load!

That's why the Koehring operator handles his work with speed, precision and confidence!

That's why he makes the most of high speed functioning—fast line travel and fast swing!

Koehring Finger Tip control is secured from easy-shifting, self-equalizing double outside band friction clutches of great contact area—this is the simple, direct, ONLY way of securing ease of control *without loss of "feel" of the load* indispensable to precision, speed and confidence in operation.

GIVE us a chance to show you what Koehring Cranes are doing in this territory — and what our service means in more profitable operation of any equipment!

Crane Capacities

Quickly convertible to shovel, pull shovel or dragline.

No. 301 — 10 tons at 12′ radius. 1 yd. clamshell bucket at 28′ radius, 45′ boom. Other sizes at proportionate radii and boom lengths.

No. 501 — 17 tons at 12′ radius. 1¼ yd. clamshell bucket at 35′ radius, 45′ boom. Other sizes at proportionate radii and boom lengths.

No. 601—19 tons at 12′ radius. 1½ yd. clamshell bucket at 33′ radius, 45′ boom.

Louisville, Ky.

Sealed Proposals

COLLEGE BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the State Teachers College Board will receive bids at the office of Ball State Teachers College, Muncie, Indiana, until 4:45 p. m., on the 17th day of June, 1929, and after this time will continue to receive bids at the office of the Indiana State Teachers College, Terre Haute, Indiana, until 10:30 a. m. on the 18th day of June, 1929, for the construction of an addition to the Burris School, located on the campus of the said Ball State Teachers College, Muncie, Indiana. Total estimated cost of said addition is $55,000.00.

Separate bids will be received as follows: (1) For the construction of the building (general construction); (2) For the installation complete of heating and ventilating system, and plumbing and sewers; (3) For the installation complete of electric wiring; (4) For the construction of the building as a whole or any combination of contracts.

Bids must be made on Form No. 96 prescribed by the State Board of Accounts of Indiana, and must be accompanied by certified check equal to 2 per cent of the amount of the bid. All checks shall be payable to the State Teachers College Board.

The proceeds of the certified check accompanying the bid of each successful bidder shall become the sole property of said Ball State Teachers College, in the event such successful bidder shall fail to enter into a contract and execute and furnish an acceptable bond within 10 days after he has been notified that his bid has been accepted. Certified checks of unsuccessful bidders will be returned to them. Each successful bidder will be required to enter into a written contract and to execute a lawful bond meeting the approval of said State Teachers College Board in an amount equal to the amount of the contract price and conditioned for the faithful performance of the contract.

Detailed plans and specifications will be on file in the office of the Secretary-Registrar of said Ball State Teachers College, Muncie, Indiana, in the office of the State Board of Accounts, State House, Indianapolis, Indiana, and additional plans and specifications for individual use of bidders may be secured from the Architect, Ralph Snyder, succeeding Snyder & Babbitt, Architects and Engineers, 310 Hayden Bldg., Columbus, Ohio, by making a deposit of $5.00 for each set, which deposit will be returned upon the return of such plans and specifications in good condition on or before the letting of the contracts.

The right is reserved to reject any and all bids.

STATE TEACHERS COLLEGE BOARD
By Helen C. Benbridge, Secretary.
June 8-15.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that as Trustees of Steuben Township, Steuben County, Indiana, the undersigned will receive sealed bids up to the hour of 10 o'clock in the forenoon of June 20, 1929, at the First State Bank of Pleasant Lake, Indiana, and will let to the lowest responsible bidder the contracts and jobs for the erection of the Public School building, plumbing and heating of the same and the electric wiring thereof, all in full compliance and accord with the plans, profiles and specifications therefor prepared by Omer P

Gordon, Architect, and on file in my office in said Village of Pleasant Lake and at the office of said Architect at Greenfield, Indiana, and also at the office of the State Board of Accounts at Indianapolis, Indiana. All bids must be accompanied by the statement under oath required by the provisions of the Act of the General Assembly of Indiana, approved March 16, 1929, and also by a certified check equal to 10% of the amount of such bid or by a personal or surety company bond in the sum equal to the amount of the bid, subject to the approval of the said trustee and the advisory board of said township. Said bond shall be conditioned for the faithful performance of the said work and contract, the sureties on a personal bond shall be resident, responsible freeholders of the State of Indiana, at least one of whom shall be resident of said county, said bond or certified check shall be for the benefit of any person or persons or corporation who shall suffer loss or damage by reason of any such bidder failing or neglecting to enter into any contract awarded on bid or to carry out the same in any particular. Each contractor shall submit with his bid his affidavit of non-collusion with any other bidder as required by law. The right is hereby reserved to reject any or all bids.

E. F. SMITH,
Trustee of Steuben School Township.
June 1-8.

COLLEGE BUILDING
NOTICE TO CONTRACTORS

Bids will be received by the Board of Trustees of the Indiana State Teachers College at 10:30 a. m., June 18, at the office of the President of the Indiana State Teachers College, Terre Haute, Indiana, for the completion of the Physical Education Building.

Separate bids will be received for the general construction, for the heating and ventilating, and for the plumbing.

Bids must be made on form No. 96 prescribed by the State Board of Accounts and must be accompanied by a certified check equal to 5% of the amount of the bid.

Detailed plans and specifications will be on file in the office of the Registrar of the Indiana State Teachers College, Terre Haute, and in the office of the State Board of AAccounts, State House, Indianapolis, Indiana. Additional plans and specifications, together with bidder's blanks for the individual use of the bidder may be secured from Johnson, Miller, Miller & Yeager, 819 Ohio Street, Terre Haute, Indiana.

NOTICE OF SALE OF BONDS

Notice is hereby given that on the 18th day of June, 1929, at 1:30 o'clock p. m., at the office of the Township High School, in the Town of Bippus, in Huntington county, Indiana, the undersigned, Warren School Township, by its School Trustee and Advisory Board, will offer for sale and will sell the bonds of said School Township, to the highest and best bidder therefor, in the total aggregate par value of Thirty Thousand ($30,000.00) Dollars, as follows, to wit: Said bonds are all dated May 15th, 1929, and are to consist of sixty bonds of the par value of $500.00 each and shall be divided into fifteen equal series of four bonds each. The first series consisting of four of said bonds shall become due July 1st, 1930; the second series shall become due July 1st, 1931, and so on thereafter, four of said bonds to fall due on the first day of July of each succeeding year until all of said bonds become due and payable.

Said bonds shall bear interest at the rate of five (5) per cent per annum, payable semi-annually on the first days of January and July of each year and said bonds and interest thereon shall be negotiable and payable at the Bippus State Bank at Bippus, State of Indianapolis, and the interest coupons shall be attached to each of said bonds evidencing the interest thereon. The purpose of said bonds is to provide funds necessary to repair and construct buildings and structures for school purposes for said township consisting of school rooms and a gymnasium for educational and recreational purposes.

Sealed bids will be received by the undersigned and the same must be submitted in writing on or before 1:30 o'clock p. m., on said day and each bid must be accompanied by a certified check, payable to Clarence Huffman as School Trustee of Warren Township, in a sum not less than One Thousand ($1,000.00) Dollars, and on condition that said sum shall be forfeited to said School Township as liquidated and agreed damages on failure of such bidder to receive and pay for said bonds on acceptance of such bid, subject however to a reasonable time allowed for examination of an abstract of proceedings preliminary to the issue of said bonds.

The undersigned reserves the right to reject any and all bids.

Done this 8th day of May, 1929.

CLARENCE HUFFMAN,
As School Trustee, Warren School Township of Huntington County, Indiana.

Vol. XI INDIANAPOLIS, INDIANA, JUNE 15, 1929 No. 12

NEW BUILDING WORK IN INDIANA CONTINUES TO LAG BEHIND THAT OF LAST YEAR

May Figures Fail To Evidence Any Tendency Toward Any Appreciable Increased Activity

Figures returned by the building inspection officials of the various leading cities of Indiana reveal that real activity in new construction work this season is decidedly slow in taking hold. Month after month this year the reports show that there is a lethargy in the building industry that will not be thrown off and the aggregate volume of new building business for the whole state is lagging considerably behind that recorded last year. Here and there cities will show a nice improvement for a month or more and encourage the belief that work is picking up, and then invariably settle back into the rut again while some other localities that have been dormant will put on a short spurt. However, no set of cities have been able to stage a protracted run of activities that will boost the year's total of new work up to that of 1928.

Architects, contractors and material men are all asking the question, "What is the trouble?" No one seems able to furnish a satisfactory answer. Some advance the idea of high construction costs, others hint at over-built conditions, that is that there is not any great municipal growth to create a big demand for office and commercial buildings, nor is there any noticeable influex of new factories to make for industrial building of any consequence. Apartment house work is decidedly off, there being very little of it. Residential work is going ahead in fair volume, in fact in many instances it makes up the bulk of the volume of new work recorded monthly. In some localities labor differences have had a tendency to retard building work and the five-day week threat has not encouraged the public to plunge into building. The shorter working week is in effect among the trades in some localities and it would not be surprising if this will further retard building prospects as time goes on.

Ten Indiana cities reporting their building operations for the month of May turned in an aggregate volume of business totaling $4,910,695, this as against $4,874,133 for April, $4,971,202 for March, and $1,923,195 for February. Thus it can be seen that May just did hold its own against April and March.

Three of the cities reporting showed gains over May, 1928, namely, Kokomo, 130.2%; Michigan City, 101.8%, and South Bend, 85.18%. Of those showing losses from the corresponding period a year ago four were outstanding, Gary 184%, Richmond 96.6%, Indianapolis 80%, and Hammond 73.6%.

The official figures for May as submitted by the building commissioners and inspectors are as follows:

Cities	Est. Val.
East Chicago	$ 157,824
Elkhart	132,711
Fort Wayne	670,400
Gary	242,840
Hammond	366,300
Indianapolis	1,658,779
Kokomo	99,280
Michigan City	94,540
Richmond	477,866
South Bend	1,010,155
Total	$4,910,695

ELIMINATION OF LOOSE CREDITS RECOMMENDED AS A MEANS TO REMOVE "IRRESPONSIBLES" FROM THE BUILDING INDUSTRY

Here's Something for Indiana Building Men to Ponder

Admitting his proposition was not a pancea for all the ills of the construction industry but would go a long way in serving to eliminate "the irresponsibles," N. Jay Biddle, Director of the Allied Construction Industry Detroit, Mich., featured speaker at the regular June meeting of the Indianapolis Building Congress at the Chamber of Commerce Wednesday night, told one hundred contractors, sub-contractors and material men that a tightening up of credits would greatly improve the business.

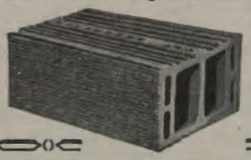
He suggested the establishment of a credit bureau by the united building interests of a city, the plan that had been put into effect in Detroit and shortly began to show good results.

First, he said, there must be organization. One of the greatest handicaps to the building industry, he asserted, is the fact that it is not one lone industry, rather it is many industries combining effort toward one goal, and because of its many component parts is unwieldly. All these interests are allied but all have not been "sold" on the proposition that their problems are mutual and that general organization is essential to their welfare, both individually and collectively. No one denies the fact that there is organization, but it is spotty, is not near one hundred per cent as it should be.

The construction industry is afflicted with troubles, serious troubles, but, before a cure can be prescribed it is necessary to ask what are the causes, to do some serious diagnosing and then the cure can be decided on.

A major trouble, said Mr. Biddle, is too low a price level. Beyond that other troubles are small. Such condition tends to breed too much competition which overcrowds the building industry.

"This," asserted the speaker, "is brought about through over-capacity, increased capital facility, coupled with increased productive efficiency, together with the use of new materials and has all helped to overload the industry with a rank and file of bidders who are incompetent. It has resulted in reducing the price of construction to a level where profits are negligible and has resulted in poor quality in service to meet the reduced price. Thus credit standards, business principles, and business ehtics have been overlooked."



"Today's slogan seems to be 'Sales at any price with bargain counter methods predominating.'

"If the credit standards of this credit building industry are broken down com-

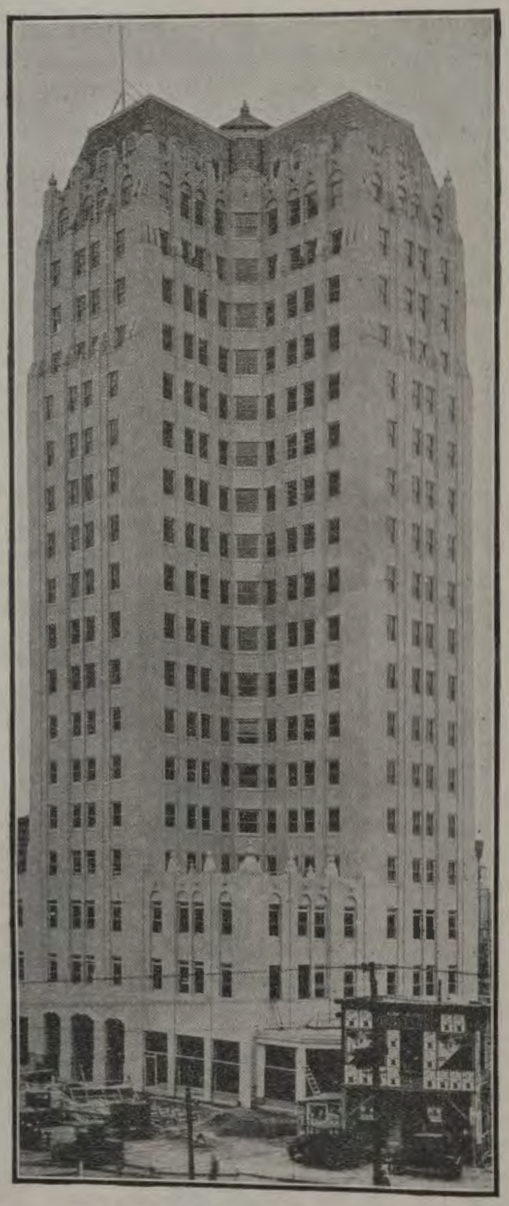
Four Things of Interest To Every Architect



1 Reinforced Concrete construction permits an unusual architectural adaptability. The Medical Arts Building at Dallas, illustrates this point. The first three floors follow the contour of an irregularly shaped lot, but to gain light and air the remaining stories form a Greek cross.

2 Reinforced Concrete construction almost invariably shows lower erection costs than competing materials.

3 Reinforced Concrete provides the tremendous, solid strength that defeats time and lowers maintenance cost.

4 Reinforced Concrete construction is fast—cutting days from usual building schedules.

You can be sure that the finished building will be **very** economical—will be easy and cheap to maintain—will last indefinitely—will always be pleasing to look at.

Reinforced Concrete
Economical—Enduring

STATE BOARD FOR REGISTRATION OF ARCHITECTS NAMED

All Indiana Architects Must Be Registered After September 1

The dream of the Indiana architect for so many years is soon to come true, the hope he has cherished for a long, long, time is about to be realized.

It has to do with the licensing of architects to practice in this state, a goal that was set some ten years ago, a goal it seemed would be attained time and again only to have stubborn opposition spring up from nowhere to thwart the final success of the effort.

However, the members of the Indiana Society of Architects were not to be denied, each defeat but goaded them on to more determined effort and, finally, at the last session of the state legislature, with the co-operation of contractors, engineers and labor, they succeeded in having an architects' license law enacted.

The latest step toward carrying the law into effect was the appointment the past week of the State Board of Registration for Architects, to be composed of these men, Architects L. A. Turnock, Chairman, Fermor S. Cannon, Robert Frost Daggett and Engineer Louis W. Bruck, all of Indianapolis, and Willard A. Knapp of Purdue University. These men are all members of the Advisory Committee of the Administrative Building Council of Indiana as prescribed by the new law their terms of office ranging from one to three years. Mr. Cannon will serve for three years, Messrs. Turnock and Bruck for two years and Messrs. Daggett and Knapp for one year. A secretary who may or may not be a member of the board is to be named shortly. Board members will receive $10.00 per day for each day they attend board meetings and be entitled to receive as reimbursement all traveling and other necessary expenses incurred in the performance of their duties as members of the board. The salary of the secretary shall be determined by the board members subject to the approval of the State Committee.

The law creating the board provides that after September, 1929, all architects must be registered with board and granted a certificate.

The board will, under provisions of the law, establish requirements and all applicants for a license to practice as an architect, will be required to pass the examinations as do engineers, surveyors, dentists, physicians and other professional men.

The important features of the law are:

Application for Certificate of Registration: Any one to engage or continue in the practice of architecture, in Indiana, must apply for certificate of registration authorizing such practice and prove ability.

Educational Qualifications for Examination: Applicant must be twenty-one years of age, or over; good moral character, graduate of high or secondary school and recognized architectural school, or completed equivalent course of study; had at least one year's experience with reputable architect or architects.

Reciprocal Provision: Registered architects from other states and territories will be granted certificate of registration upon payment of required fee.

Examination of Applicants: To be held at decision of board, shall consist of written and drafting tests, supplemented by verbal examination at discretion of board, and cover: (1) Planning, specifying, designing and construction of buildings; (2) Strength of building materials; (3) Principles of sanitation and ventilation as applied to buildings; (4) Ability of applicant to make practical application of his knowledge.

Issuance of Certificate of Registration: Permits applicant to practice architecture in Indiana.

Time Limit to Applicants: Any architect proving he was engaged in the practice in Indiana one year previous to enactment of this law may secure certificate of registration upon payment of required fee.

Display of Certificate: Must be displayed in conspicuous place in office or place of employment.

Renewal of Certificate: For continuation of practice certificate of registration must be renewed annually by payment of required fee.

Refusal to Renew, Suspension or Revocation of Certificates: Board has power to act for causes as stated in law.

Fees: The fee for registration shall be twenty-five dollars, same for annual renewal.

Offenses Defined—Penalty: Misdemeanors punishable by fine of not less than $25.00 or more than $200.00 for each offense and each day's violation thereof. (1) To practice architecture or so construe without certificate of registration. (2) To make false oath where oath is required. (3) Affixing of registered architect's seal to plans not prepared under his supervision.

Corporations and Partnerships May Engage in Practice: Provided persons so connected and having supervision of plans are registered architects under this law.

Sunday School rooms, remodeling tower, new composition built-up roof, structural steel, steel sash.

***Consolidated Grade School:** $50,000.00, 2-stys. and bas., Noble township, Shelby county. Archt., Norman Hill, 1050 North Delaware street, Indianapolis. Owner, Alfred C. Howe, trustees, Rural Route 3, Flat Rock. Bids in under advisement. Brick, structural steel, stone trim, steam heating system, composition built-up roof. Will include six classrooms and community auditorium.

***School Building:** $50,000.00, 1-sty. and bas., 72x91 (4 rooms), District School No. 15, Bridgeport, on National road, Wayne township, Marion county. KOEHRING

DANDIE

Fit a Dandie to Your Job!

HERE'S the Dandie 7-S, for example—a one bagger with liberal room for mixing action!

Equip it with the fast charging skip, roomy enough and right-shaped to chute materials into drum in a swift, clean slide. No clogging!

—or fit it with roomy low charging hopper and the strong sturdy platform that hinges up against drum in moving from job to job!

Give it the Koehring automatic water measuring tank, and batchmeter to time mixing period and you're equipped to meet strict specifications and quality tests!

However you equip your Dandie, you'll get fast charging and fast discharging! You get the long-service reliability of superior construction, the easy portability and handiness of practical design!

Study the Dandie transmission—that in itself tells a wonderful story of service-life!

The more you know the Dandie — the more you'll recognize it as the *outstanding value in its class!*

† † †

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Dandie Mixers: 5-S, 7-S, 10-S

5-S single cylinder, 7-S two or four cylinder, 10-S four cylinder gasoline engine. Charging skip or low charging hopper and platform. Rubber tired or steel rimmed wheels. Comply with A. G. C. standards.

Sealed Proposals

COLLEGE BUILDING

NOTICE TO CONTRACTORS

Notice is hereby given that the State Teachers College Board will receive bids at the office of Ball State Teachers College, Muncie, Indiana, until 4:45 p. m., on the 17th day of June, 1929, and after this time will continue to receive bids at the office of the Indiana State Teachers College, Terre Haute, Indiana, until 10:30 a. m. on the 18th day of June, 1929, for the construction of an addition to the Burris School, located on the campus of the said Ball State Teachers College, Muncie, Indiana. Total estimated cost of said addition is $55,000.00.

Separate bids will be received as follows: (1) For the construction of the building (general construction); (2) For the installation complete of heating and ventilating system, and plumbing and sewers; (3) For the installation complete of electric wiring; (4) For the construction of the building as a whole or any combination of contracts.

Bids must be made on Form No. 96 prescribed by the State Board of Accounts of Indiana, and must be accompanied by certified check equal to 2 per cent of the amount of the bid. All checks shall be payable to the State Teachers College Board.

The proceeds of the certified check accompanying the bid of each successful bidder shall become the sole property of said Ball State Teachers College, in the event such successful bidder shall fail to enter into a contract and execute and furnish an acceptable bond within 10 days after he has been notified that his bid has been accepted. Certified checks of unsuccessful bidders will be returned to them. Each successful bidder will be required to enter into a written contract and to execute a lawful bond meeting the approval of said State Teachers College Board in an amount equal to the amount of the contract price and conditioned for the faithful performance of the contract.

Detailed plans and specifications will be on file in the office of the Secretary-Registrar of said Ball State Teachers College, Muncie, Indiana, in the office of the State Board of Accounts, State House, Indianapolis, Indiana, and additional plans and specifications for individual use of bidders may be secured from the Architect, Ralph Snyder, succeeding Snyder & Babbitt, Architects and Engineers, 310 Hayden Bldg., Columbus, Ohio, by making a deposit of $5.00 for each set, which deposit will be returned upon the return of such plans and specifications in good condition on or before the letting of the contracts.

The right is reserved to reject any and all bids.

STATE TEACHERS COLLEGE BOARD
By Helen C. Benbridge, Secretary
June 8-15.

COLLEGE BUILDING
NOTICE TO CONTRACTORS

Bids will be received by the Board of Trustees of the Indiana State Teachers College at 10:30 a. m., June 18, at the office of the President of the Indiana State Teachers College, Terre Haute, Indiana, for the completion of the Physical Education Building.

Separate bids will be received for the general construction, for the heating and ventilating, and for the plumbing.

Bids must be made on form No. 96 prescribed by the State Board of Accounts and must be accompanied by a certified check equal to 5% of the amount of the bid.

Detailed plans and specifications will be on file in the office of the Registrar of the Indiana State Teachers College, Terre Haute, and in the office of the State Board of AAccounts, State House, Indianapolis, Indiana. Additional plans and specifications, together with bidder's blanks for the individual use of the bidder may be secured from Johnson, Miller, Miller & Yeager, 819 Ohio Street, Terre Haute, Indiana.

INDIANA STATE TEACHERS COLLEGE.
BOARD OF TRUSTEES OF THE
By Helen G. Benbridge, Secretary.
June 8-15, 1929

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Separate bids will be received upon general, heating, plumbing, boilers, stokers and electrical work.

The right is reserved by the Board to reject any and all proposals.

BY ORDER OF THE BOARD OF TRUSTEES, INDIANA SCHOOL FOR THE BLIND.
June 15-22-29

ELIMINATION OF LOOSE CREDITS

(Continued from Page 3)

pletely it will invite over-financed and incompetent operators on building projects, long term notes with the possibility of no collection. Loose credit has been responsible for the overcrowding of the contracting field, price cutting, bid peddling, and many other slippery or crooked practices. Thus the good construction operators have been handicapped and penalized, the building industry has been overcrowded, and a number of unfair practices have cropped up.

"This credit problem is one of the most serious things affecting the building industry today. We must submerge our individual interests for the good of the industry. We can not control the productive capacity of any industry. It is impossible and illegal to control prices; credit is different, we can control that. To establish and maintain fair and equitable credit standards is not only legal but good business. Sound credit policies rigidly enforced will decrease (1) past due accounts; (2) monetary loss; (3) collection costs! and eliminate unfair and unbalanced competition.

"You may perhaps be interested in knowing just what policies are in effect in the different groups of Detroit at present. In the building material section the policy is, goods purchased during any one month must be paid for by the 15th of the following month in order to secure the cash discount. The account is net to the end of the month and if still unpaid, all further shipments are on a C. O. D. basis. The same terms apply for the steel group.

"In the electrical field the terms are the same with the exception that the fixed discount date is the 10th of the month instead of the 15th.

"We have not operated long enough in the other fields yet to have any definite figures to present at this meeting but in the electrical field we have some very startling results.

"On August 1st, 1926, there were 850 licensed electrical contractors. Two years and five months later on January 31st, 1929, there were 374 licensed electrical contractors and only two of these who were on the permanent cash list during 1928 were able to re-license in 1929. Also the jobbers were never able to get in their money so easily as is possible now.

"There is just one result for the building industry under the credit bureau system and those operating under it, either the contractors, sub-contractors, jobbers and supply men must qualify and measure up to the standards set or they must eliminate themselves from the field."

Mr. Biddle who, through his Detroit system, has attracted the attention of local and national associations throughout the country appeared before the Indianapolis Building Congress at the solicitation of the Credit Committee of the Congress of which Emmett Hall is chairman.

President Robert Frost Daggett presided at the meeting, and in introducing Mr. Biddle said it is the aim of the organization to present to the membership real constructive thought with the idea that out of the presentations will develop action that will advance the building industry and all of its allied interests in Indianapolis.

At the conclusion of the meeting President Daggett called the attention of those present to the increased membership effort that is now being exerted and urged everyone to get out and "sell" the congress to the building interests of the city.

He also called attention to the fact that the annual outing, and golf tournament of the Congress will be held Friday, June 21, at the Avalon Country Club.

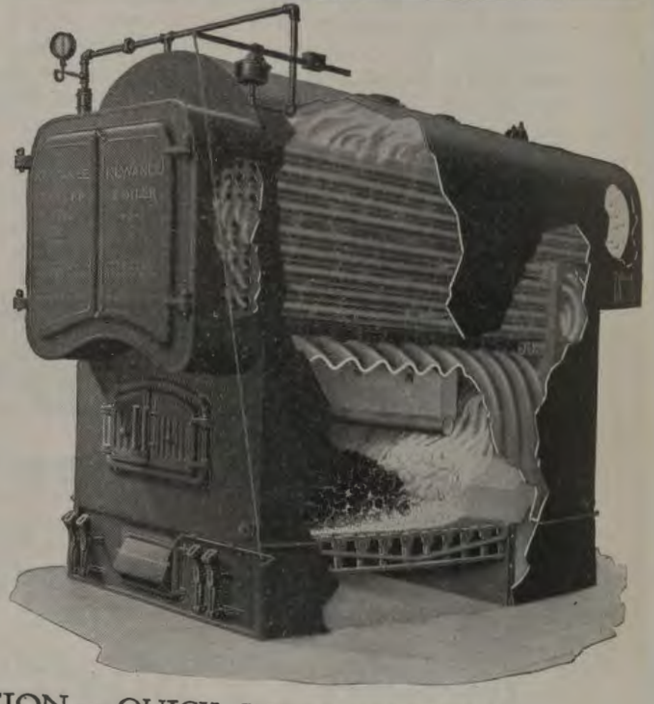
"B60" Series Hot Blast Smokeless Boiler

Patent Pending

The success or failure of a heating installation depends upon getting the right boiler. Next to efficiency, the matter of economy is an important point. PROX BOILERS are built for economical service and lasting satisfaction. They are so constructed that the maximum number of heat units are generated from every shovelful of coal consumed.

PROX HOT BLAST SMOKELESS BOILERS
Burns all grades of fuel, such as bituminous coal, lignite, coke, oil, gas, wood



Capacities—800 sq. ft. to 25,000 sq. ft. steam

COMPARATIVE BUILDING FIGURES STILL SHOW DECLINE

Country's New Construction Volume for May Fails to Indicate Any Marked Recovery from Lethargy Which Has Prevailed in the Building Field This Year

Official reports of building permits issued or plans filed in 591 leading cities and towns of the United States made to S. W. Straus & Co. for the month of May, show that substantial losses generally have been sustained as compared with the records of the previous May, although the seasonal variation from April to May was less pronounced than the normal decline. The May total of $307,908,668 was 19% less than the May, 1928, totals, amounting to $381,786,960; it was 43% less than the April, 1929, record, amounting to $539,423,086.

These figures, however, are not to be taken as an index of conditions in the national building industry, for the reason that they have been greatly affected by an abnormal situation in New York City. The Multiple Dwellings Bill, pending in the State Legislature at Albany and later awaiting the signature of Governor Roosevelt, brought about a rush to file plans in New York City. Thus, the figures for March and April were abnormally large, while the May figures were far below normal, as millions of dollars' worth of plans that ordinarily would have gone on the records for that month were filed earlier.

When a study is made of the 590 centers outside New York City it is found that the total issue of permits for May was $265,699,470, which compares with a total for May, 1928, of $294,861,699, a loss of slightly less than 10%. In the same cities permits amounting to $278,268,818 were issued in April this year, the loss in May compared with these figures being less than 5%. The normal seasonal variation from April to May is a decline approximately of 15%.

Building Materials

Seasonal activity in building materials sustained prices during May. Some weakness was reported in common brick, but the other materials held firm, especially structural steel.

The Labor Situation

Within the last thirty days considerable labor difficulty developed in the building industry but substantially all disagreements have been adjusted. The most serious situation was presented in Chicago, where some $200,000,000 of construction was side-tracked for several days, pending adjustment. Quite a number of wage increases were granted. Labor difficulties of no small consequence have recently developed in New York, St. Louis and Baltimore. Labor in Canada also has shown a restive spirit lately, which has affected construction activities in Montreal and Toronto.

On the Pacific coast some unemployment in the labor crafts has been reported. In the San Francisco Bay district nearly 20% of building laborers have failed to find steady employment. Similar conditions prevail in Southern California. In Seattle and Portland, conditions were reported more satisfactory, attributed by labor leaders to the three-year wage agreement which has two years to run.

FAIR PRACTICE RECOMMENDATIONS

National Contractors Association Seeks To Create More Harmonious Relationship Between General and Sub-Contractors

The Allied Construction Industries Committee, which was formed under sponsorship of the Associated General Contractors of America, has undertaken the task of enunciating principles of fair practice, which will promote recognized ethical standards among all of the contracting groups and tend to eliminate irresponsible operators of all types from the industry.

It is commonly recognized by responsible general and sub-contractors that the effect of many unsound business practices which have crept into contracting are driving the trend of prices below cost of production and threaten to eliminate in all of the groups the type of contractor who may be properly designated as a master builder.

It is also commonly believed that harmonious relations between the responsible members of these different contracting groups are necessary, if any of these groups are to escape the disaster of a completely demoralized construction industry. The Committee has found that ill will and lack of cooperation between the general and sub-contractors in many instances is very acute and that neither can escape the injurious effects of such a condition. It believes that a great portion of the distrust and suspicion which the public holds toward all of the contracting groups arises out of their failure to work harmoniously together.

It is obvious that in an industry as complex as construction, no set of rules or practices can be launched and carried out immediately or that they can ever be established without mutual support from both sides. Therefore, the committee has moved very cautiously and has proposed only such principles as appeared likely to meet with the approval of both the General and Sub-contracting National Associations. Others are to be proposed after further study.

The Committee presents herewith five principles which were approved unanimously at the Meeting in Cleveland, May 14, 1929. These principles are believed to be entirely compatible with the best interests of all general and sub-contractors who desire to conduct their business along proper lines. It is earnestly hoped

FAIR PRACTICE RECOMMENDATIONS

(Continued from page 3)

that they will be approved by all of the thirteen associations represented on the Allied Construction Committee.

The principles are as follows:

No. 1. All charges comprehending within "General Conditions" of the specifications in work let under a General Contract shall be assumed and paid for by the General Contractors, and no part of the same shall be prorated or charged back to sub-contractors, and sub-contractors' proposals or estimates shall carry a notification as follows: "No pro rata or other charges arising out of General Conditions are included."

No. 2. All sub-contractors shall carry and pay for "Workmen's Compensation Insurance" in states where such compensation insurance is operative, and general liability insurance where compensation insurance is not operative and in addition "General Public Insurance" to protect themselves upon the work they are doing. Compensation and other insurance shall be placed by the sub-contractors in any company licensed to do business in such state where the work is to be done, without any restriction by either the owner or others.

No. 3. When general contractors have taken or canvassed bids, before bidding on work, they shall not again take or canvass bids, but they shall award the work to the sub-contractor, submitting the bid upon which they secured the work. A general contractor, when making up his estimates, is not entitled to receive bids from sub-contractors, if he is at the same time making himself their competitor by figuring their portion of the contemplated work, or by arbitrarily discounting the bids so given him.

It is legitimate for a general contractor to figure all portions of the work, depending upon no one for what are usually known as sub-estimates, but it is not legitimate for him to receive bids from others for sub-work and then to figure those portions or to discount them in competition with sub-bidders.

No. 4. In event that a general contractor waives the right of lien of sub-contractors on a construction project, he shall, before entering into contract with any sub-contractor selected, give the sub-contractor notice of that fact in writing, and shall provide an indemnifying bond to insure payment to the sub-contractors.

No. 5. The practice of financing or guaranteeing accounts of general contractors by sub-contractors, or sub-contractors by general contractors is detrimental to the best interests of the entire construction industry and the building public.—Approved by A. G. C. Executive Board. (Monthly Bulletin Bldg. Constn. Employers Ass'n, Chicago.)

A MEANS TOWARD A REMEDY

Excerpts from Address Before the Indianapolis Building Congress

"The Building Construction Industry needs a closer check on its credit system. Credits in this field are too slipshod as practiced generally."

* * *

"Loose credits encourage too low price levels, too much competition."

* * *

"Such methods lower prices, reduce the quality of service, break down the whole fabric."

* * *

"The big idea today seems to be sales at any price."

* * *

"It all must be checked somehow, some way, or things will grow worse and suck the whole industry down to destruction."

* * *

"The current arrangement enables the non-payer to stay in business."

* * *

"There is no way to get away from the fact that loose credit is responsible for overcrowding the field, contentment with small profits, and the intrusion of 'the irresponsible.'"

* * *

"Thus the good operator is handicapped, he is penalized by the incompetents who drift into the field."

* * *

"How much longer will contractors continue to contribute to their own destruction, sit supinely by and watch things 'go to pot?'"

* * *

"The whole problem resolves itself into a question of method."

* * *

"To rectify the lamentable conditions as they exist today will require the concerted attack of a united building industry. Such an attack must embrace all the groups involved in the industry. Individual and single groups are helpless to get anywhere."

* * *

"The proper form for action is on a basis of trade group affiliation."

* * *

"One of the weak links in the building industry is the lack of organization. No one denies there is organization, but, it is spotty."

* * *

"There are too many men in the business who want to go it alone."

* * *

"On the other hand many of the organized groups have no central affiliation and, in acting individually, work at cross purposes."

* * *

"Membership in a central co-ordinating body should be through representatives from trade groups rather than by individual memberships of the various men of the different interests."

* * *

"Three factors govern the flow of business: 1st, production; 2nd, price; 3rd, credit. Production depends upon ability; prices can't be fixed; credit can be controlled."

* * *

"To fix prices gives all those on the outside a target to shoot at; fixed price levels penalize the competent operator, and in like turn subsidize the incompetent."

* * *

"A foundation of sound credit is good business. It results in healthy turnover, sales and profit."

* * *

"Establish a strict credit system, stick to it, and all men in the industry must measure up to it or eliminate themselves in time."

* * *

"That effected it will control and regulate the whole chain of distribution."

* * *

"It is high time for the building industry to clean house, get rid of the dead wood. When that is done much of the unethical practice that has been a canker in the field will disappear."

ONE WAY TO CUT DOWN ON BID-PEDDLING

Antidote Practiced by Wisconsin Builders To Minimize the Evil

Just how much truth there is to all the bid peddling talk that is bandied around is problematical, but, where there is smoke there must be fire, so goes the old saying and it is logical.

Every city in Indiana has had its building circles torn more or less asunder by the above evil; it has driven men apart, has upset associations and created bad feelings. Why not take a chance on this antidote which has been adopted by the Master Builders Association of Madison, Wis. The contractors up there while not

convinced it will completely solve the problem do believe it will serve to clear up the situation to an appreciable extent.

That association has formed a set of Rules and Regulations Governing a Duplicate Bidding System, and has furnished all members with special forms to be used in submitting estimates.

Here are the rules:

Rule No. 1—Use of Forms

Three forms will be furnished each bidder.

White paper, original; pink, duplicate; yellow, triplicate.

Original: To be given to owner or architect.

Duplicate: To be filed in special locked drawer in file cabinet in Builders' Exchange Office.

Triplicate: To be retained by bidder for his files.

Rule No. 2—Making of Bids

All bids will be made in triplicate with carbon paper between each sheet, names and amounts will be printed or written plain and legible without erasing.

Rule No. 3—Use of System

The system is for the use of all members of the M. B. A.

Bids will be opened and information given only to those who have filed bids.

Rule No. 4—Architect or Owner's Bid Forms

Where architect or owner have their own bid form, copies of same will be furnished by the building exchange manager at his office.

A bidder bidding on a regular bid form furnished by the architect or owner can deposit a duplicate bid stating the name of job and the amount of the bid.

Rule No. 5—Penalty

If a bidder should use one amount on his original bid and another amount on his duplicate bid he would not be permitted to participate in the duplicate bidding system again.

Rule No. 6—Opening of Bids

When bids are called for to be in at a certain time and no specific time for the opening of same is given, the architect or owner will be given a reasonable time for opening. The time then will be set by the M. B. A.

Rule No. 7—Unopened Bids

Should the occasion arise whereby bids are not opened, they will be retained by and can be had from the Exchange Manager.

Any effort in this direction appeals to the fair minded, will have a moral effect in time if adhered to and is bound to create a better relationship between builders when every man realizes he is getting a square deal.

Indiana contractors associations would do well to give this matter serious consideration.

HARVARD REPORT ON EXPENSES AND PROFITS OF BUILDING MATERIAL DEALERS REVEALS INTERESTING FACTS

Spotlight Focused On Reputed Excessive Profits

One hears frequently, in regard to high construction costs, much comment relative to the high cost of building materials and the inference made that material supply dealers and men are reaping injustifiable profits. In this connection some enlightening and interesting news material has just been issued by the Harvard Bureau of Business Research which tends to show that the average profit is anything but inflated.

The article in question deals with a study of operating expenses and net profits of building material dealers during 1927, and is the result of survey made over an extensive territory amongst representative firms in the building supplies field. To secure such data the survey was started at the instance of a large building material supply firm which furnished the funds to defray the cost attendant upon such effort. The report is based on figures submitted to the Bureau by two hundred and eighty-eight individual dealers and by sixty-one line yard organizations operating approximately seven hundred and seventy yards. The volume of business represented was well above $150,000,000.

The Harvard report shows that, on the average, building material dealers handling primarily mason materials secured a higher net profit in 1927 than did dealers in any other lines or groups of lnes, the typical profit figure for mason material dealers being 1.7% of net sales. Lumber dealers were next in line with a typical profit of 1.0% of sales. Dealers in lumber and coal and in lumber, mason materials, and coal commonly obtained profits of 0.6%; dealers in mason materials and coal, a profit of 0.2%; and dealers in lumber and mason materials neither a profit nor a loss.

In general, the more favorable results shown by mason material dealers were attributable to low operating expenses rather than to high margins. When the firms in this group were classified according to their rate of profit it was found that total expense ranged from 27.5% of sales for firms incurring a net loss to 18.1% for firms with profits above 3%. Similarly, in the second most successful group, that of the lumber dealers, firms showing a net loss of more than 3% had total expense of 29.9% as contrasted with an expense figure of 19.7% for firms obtaining a net profit of more than 3%. The savings in expense were not concentrated in any particular item but rather were scattered over nearly all the items.

To quote from the conclusion of the Harvard report, "- - - of the three elements from which profit or loss is the net result, cost of goods, sales of goods, and operating expenses, the operating expenses alone are under the direct control of the individual merchant. For the merchandise which he buys he must pay approximately the current market rate. When he comes to sell, he is in large measure restricted to the local market price of similar products. When it comes to his expenses of operation, however, he is relatively free to control them as he sees fit. It has been found that, in general, firms which make unusually high net profits are those with low operating expenses rather than those which obtain large margins on their sales."

AS THE CONTRACTOR HEARS IT

We like this plan of cottage, tho we changed it once or twice—

Just some minor alterations that should not affect the price.

Where it shows a single window, wife suggests a double door,

And she'd like the kitchen better if it had a maple floor.

The parlor should be longer, with a fire place to the east,

And one more double window on the other wall at least.

The woodwork in the dining room should be of better grade,

And on the south, my daughters want a dormer window made.

They also think the sleeping porch a little bit too small,

And wish a full length window built in every bedroom wall.

The porches must be widened out, with larger pillars there;

And then in place of yellow pine, we want an oaken stair.

The side walls should be raised a bit—at least a foot or so.

And substitute for narrow eaves the modern bungalow,

With these few changes, we all think the plan is very nice—

Just some minor alterations that should not affect the price.

—From the Hoosier Realtor.

ARCHITECTS' REGISTRATION BOARD APPOINTS SECRETARY

John H. Owens, Well Known in State Building Circles, Named

The new Board for the Registration of Architects, recently organized in accordance with the recently passed Architects' Registration Law, has named John H. Owens, Indianapolis, as secretary to the board. Mr. Owens is well known among architects and builders, being secretary for the Associated Building Contractors of Indiana and officiates in a like capacity for the State Building Congress.

A NEGLECTED OPPORTUNITY

Luncheon Clubs Offer Fertile Field for Desirable Publicity

There is an avenue of publicity open to the architects of Indiana that few are traversing, in fact, one might think there was a "detour" sign across it from the way the architects drive around it to reach a publicity destination. The members of the profession talk about getting architecture before the public and many can see nothing but the newspapers. The latter are all right when it comes to news, a chronicling of some progressive move or public spirited action in which the profession is engaged, but, when it comes to the alleged "Building Pages" issued by some newspapers their value from a reader interest angle is nil. How many such pages in Sunday or special week day editions did you, individually, ever find with any real appeal? Most of them are filled with "personal puff" stuff written by the advertisers and inserted gratis to float the advertising, and as a special feature one may find a plan and pen "plan factory" and syndicated to papers drawing of some house turned out by some throughout the country. That kind of page is good to light fires with or wrap a bundle in but it won't afford much of the kind of publicity desired. One is inclined to wonder if anyone ever reads the stuff.

On the other hand, beyond the newspapers, is the publicity channel mentioned above, the luncheon-service clubs. They are composed of the business men of the city, the go-getters, and these organizations are constantly open for speakers who have real messages, in fact they seek speakers all the time. Here is a field the Indiana Society of Architects would do well to cultivate by encouraging its members in the various cities to appear before such civic clubs and put across architecture's messag). Architecture is a big subject but it can be boiled down, split up into many interesting parts and presented in an enlightening manner. Here is a chance to give the business men, the men who build in a big way, "inside information" that they will "take," like, become interested in, and, in turn, turn to the architect when they desire to build. The main point is to acquaint the layman with the profession, its mission, its service and here is one opportunity for doing that.

NOT SUCH A BAD IDEA

Any Move to Convert the Layman to the Value of Architectural Service Is Doing a Good Turn by the Public

Architectural supervision is an important factor in any building operation, it is a part of architectural service that should be siezed upon by all clients to insure themselves that they are getting what the plans call for, the material and structure for which they contracted. However, many prospective builders think that the making of plans is the chief function of the architect and any added service is superfluous, entailing unnecessary cost. They fail to appreciate what it means to have a personal representative, the architect, on the job to watch the progress of the work, see and insist that the materials specified are used and that the work is done right.

Along this line an interesting bit is offered by H. G. Gibbs of the architectural firm of Gibbs and Cramer, Winter Haven, Fla., who writes interestingly of a plan employed by him to educate their clients as to the importance of architectural supervision, a procedure that has been found most productive of good will.

This is what he has to say:

"We endeavor to leave the clients we serve conscious of a satisfaction with our service; leaving no stone unturned to retain them as personal friends. To this end, we keep a record of the date of every supervision visit we make to their project and send with, or at the time of issuing, the last certificate of payment an itemized statement of these visits of inspection. On projects near at hand where such visits are made almost daily the resume obviously is sometimes rather imposing.

"The effect of this is to convince the client that our interest in his building didn't cease with the letting of the contract; he has the concrete evidence before him that the architect was a real factor throughout the entire period of construction. We have found from past experience that the owner, as well as the general public is prone to accredit the supervision portion of the construction entirely to the contractors. We are endeavoring, in our humble way, to correct this impression, one which is a ponderous stumbling block to the public's realization of the full function of the architect.

"By so doing, we shall in time sufficiently overcome this obstacle so that the passerby may see the architect at his labor and attribute to him his lawful share of credit for the structure when completed."

STEEL INSURES STRENGTH AND SECURITY

STEEL INSURES STRENGTH AND SECURITY

Another Proof of STEEL'S Superiority

Somewhat remote from ordinary steel construction is this gravel plant assembly, fabricated and erected by Hetherington & Berner for the Marion County Sand & Gravel Co, of Indianapolis. Yet here is demonstrated most strikingly steel's superiority. Structural steel has here made a compact, clean, workmanlike job, easy of operation and access. Above all, steel has provided the feature of mobility not obtainable successfully with any other material, because should it be necessary to move this plant to another location, it can be taken apart quickly and set up again speedily, with no damage to the component parts. The qualities of strength and security that make steel so desirable for this particular work are present wherever steel is used, whether it be in a skyscraper or in a modest dwelling.

Sealed Proposals

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Trustees of the Indiana School for the Blind at the office of the Board in the present building at North and Pennsylvania Streets, Indianapolis, Indiana, until two o'clock p. m., Wednesday, July 3, 1929, for the completion of the Indiana School for the Blind at 75th Street and College Avenue, Indianapolis, in accordance with Revised Plans and Specifications prepared by and under the supervision of Harrison and Turnock, Architects and Engineers, 500 Board of Trade Building, Indianapolis, said plans now being on file at the office of the Board of Trustees, at the State Board of Accounts and at the office of the Architects and Engineers.

Separate bids will be received upon general, heating, plumbing, boilers, stokers and electrical work.

The right is reserved by the Board to reject any and all proposals.

BY ORDER OF THE BOARD OF TRUSTEES, INDIANA SCHOOL FOR THE BLIND.

June 15-22-29

SCHOOL HOUSE

NOTICE TO CONTRACTORS

Notice is hereby given that the School City of Shelbyville, Indiana, Shelby County, and the Board of Trustees thereof, will receive sealed bids at the office of the said Board of Trustees, located in the Departmental Building, Shelbyville, Indiana, until Wednesday, 1:30 p. m. July 10, 1929, at which time and place same will be opened, read and considered for the heating, ventilating and plumbing systems in the Alteration and Addition to the Thomas A. Hendricks Grade School Building, in said city and all by and according to plans and specifications as provided therefor as further approved by the State Board of Health and State Board of Accounts. Estimated cost of the above $20,000.00.

The plans and specifications are on file for the inspection of bidders at the office of the Board of School Trustees, Shelbyville, Indiana, and at the office of Leonard, Wolf, and Hoagland, Architects, 309 Peoples Life Building, Frankfort, Indiana, and 1307 New City Trust Building, Indianapolis. Copies are available to bidders for use at their own offices upon deposit with the Architects or Trustees of $25.00 to guarantee safe return of same on or before opening of bids. If plans are not returned on date of letting, deposit shall be forfeited. Bidders must familiarize themselves with such plans and specifications before bidding and no departure from the same will be considered.

Bidders on submission of bids will submit same as follows:

1. On heating and ventilating.
2. On plumbing.
3. On heating, ventilating and plumbing combined.

In this way the bidders only being required to submit his bid for such portion of the total work as he may desire.

Bidders will be required to visit the building which is under construction not prior to Tuesday, July 9th, and not later than the hour of receiving bids in order to inspect the work included under Plumbing, Heating and Ventilating, that may be installed by the General Contractor up to the above dates. Bidders will be required to state in their bids the sum to be allowed for the work found completed, showing each sum itemized respectively under Plumbing, and under Heating and Ventilating combined.

All bids shall be accompanied by the certified check of the bidder in sum equal to at least 5% of his gross bid or bids, conditioned upon his entering into his written contract with sufficient and approved surety if he is the successful bidder, according to proposal. Checks to be made payable to Treasurer of the Board.

All bids and proposals shall be upon the forms prescribed by the State Board of Accounts. Unless bids are accompanied by certified checks as above and upon forms as above, no attention will be given same.

The successful bidder will be required to enter into his written contract and also deliver his bond from approved surety company to the School City of Shelbyville, Indiana, in a sum equal to the full amount of contract as usually conditioned.

The successful bidder will be required by the terms of his contract to enter into the active prosecution of his work immediately, and complete said work at the time mentioned in general conditions of the specifications. The Board of Trustees for the School City reserve the right to reject any and all bids without giving any reason therefor.

SCHOOL CITY OF SHELBYVILLE,
Shelby County, Indiana.

INDIANAPOLIS BUILDING CONGRESS PUTS ACROSS SECOND ANNUAL OUTING IN GREAT SHAPE

Capital City Building Fraternity Gets Together for a Big Afternoon at the Avalon Country Club

Builders and building men, architects, contractors, engineers, subcontractors and material supply men, the whole gamut, just like other business men have learned that they can play. Further, they have come to an appreciation of the fact that recreational effort is an asset to them physically, peps them up and gives added zest to business, and that time thus devoted is well spent when all is said and done. Not only have they learned to play, but, they have learned to play together, and in the association have found contacts that have broken down former petty prejudices, created greater understandings of each other and served to inject into building circles a greater spirit of brotherhood than existed heretofore.

This latter condition is the result of professional and trade organization effort, first individual and then extended out over the whole field to embrace all under one central organization such as the Indianapolis Building Congress. Such a body is primarily for business, but the members, in gathering to discuss business problems and work out solutions for the good of the industry, come to know each other better and in time, intermixed with the serious, comes play.

Hence it was that the old Millersville road angling northeast from Indianapolis gave off a cloud of dust Friday afternoon, June 21, as a motor caravan moved swiftly along carrying the members of the city Building Congress out to the Avalon Country Club for the annual outing and golf tournament. Quite a crowd, representative of the whole building industry of the city, was in attendance. The old hills along Fall Creek, denuded of their forests and dressed in folds of beautiful sweeping green fairways, cut to the latest golf fashion, were stormed enmasse and taken over for the afternoon's recreation.

Some of the crowd retreated to the club house and there played the nineteenth hole while their friends and buddies banged, whiffed and dubbed their way around the greater distance, the other eighteen holes. Everyone was out for a good time, so, what mattered if one played just the nineteenth hole or the whole nineteen?

Followed hours of fun with golfers, good, bad and indifferent trekking along with alleged, pseudo and initiates all smashing their way on a merry round over hill and dale. There were over twelve foursomes in action which during the afternoon meant quite a barrage of the little white gutta percha pellets zinging through the sun-kissed atmosphere.

There was other recreation, too. Some of the boys, for whom golf is too strenuous, turned to horseshoe pitching and thus whiled the hours away. Others found amusement in archery and sought diligently to pop the bull'seye with more or less, mostly less, success.

Evening closed down on a tired and hungry horde, but there was the handsome and spacious club house not far distant, still discernable in the lengthening shadows and there everyone took refuge. That was a happy hunch for the beautiful dining room, from which could be seen the surrounding hills and valleys, was all ready for the invasion. There dinner was served to bring to a happy conclusion a happy day.

Mayor L. Ert Slack of Indianapolis was the guest of honor and distributed the prizes for the various events. Robert Frost Daggett, president of the Indianapolis Building Congress, acted as toastmaster.

There was a fine and extensive assortment of prizes donated by these men and firms: Hugh J. Baker & Co., Capital Glass Co., Central Supply Co., A. I. Clifford Co., Crane Co., Robert Frost Daggett, A. E. Davis, General Electric Co., Lake States Division, Indiana Construction Recorder, Indianapolis Building Congress (5), Indianapolis Power & Light Co., G. E. Pierson, Sanborn Electric Co., Vonnegut Hardware Co.

Rigid Skeleton Cuts Wind Sway

The construction of the Sharp Building, Lincoln, Nebraska, is very interesting. (Frame, reinforced concrete. Height, 16 stories. First floor area, 14,200 square feet.)

The *reinforced concrete frame* is so rigid, it withstands wind stresses that usually would crack brickwork and terra-cotta. From the 2nd to the 11th floors, steel reinforcing was increased in beams, spandrels and joists to allow for wind stresses. And a rich concrete was used. No extra provision was necessary for wind stresses above the 11th floor.

By using the maximum percentage of steel and spirals, the column sizes were held down. (Largest interior column, first floor, 32 inches square.)

Since the builders knew that reinforced concrete assures: strength, economy, speed, permanence, beauty —nothing but reinforced concrete was considered for this office building, the tallest concrete frame construction in Nebraska.

SOMETHING NEW AND NOVEL FOR I. S. A. MEMBERS

Mid-Summer Meeting and Outing Planned Up Along Lake Michigan

Here is an attractive week-end trip for Indiana architects if there ever was one: a glorious outing up along Lake Michigan with other members of the Indiana architectural profession.

The occasion will be the mid-summer meeting of the Indiana Society of Architects, Friday, July 12, at Michigan City and a special program has been arranged so that all attending will have a good time.

Vacation days, summer, and the opportunity for an outing were all taken into consideration in the selection of the site for the meeting. It may seem a little out of the way but Michigan City is easily accessible both by rail or motor car, and the lure of the lake shore where the great rolling Michigan comes in to lap at Indiana should serve to urge state architects to make the trip.

Northern Indiana members of the profession are eager to entertain the Society, and advance the assurance that it will be a journey well worth making. Too, it has been quite some time since the I. S. A. has held a meeting up that way and the architects up there welcome the opportunity to greet those from other parts of the state.

A full day's program has been arranged and will consist of a business meeting, noon luncheon, golf and swimming and a special evening dinner.

The advance schedule for the day calls for the following:

10 a. m.—Directors' meeting, Spaulding Hotel. (All delegates are invited to attend.)

12 noon—Lunch, Spaulding Hotel.

2 p. m.—Golf and swimming at Long Beach Country Club.

7 p. m.—Evening dinner, Long Beach Country Club.

A special feature of the affair is that the architects are urged to take their wives for whom accommodations will be arranged.

This is one of the most attractive programs the Indiana Society of Architects has ever held out to its members and the officers and directors are hoping the response will warrant further effort in this direction again in the future.

INDIANA CHAPTER A. I. A. MEMBERS HOLD ANNUAL MEETING

Arthur Bohn, Indianapolis, Elected President

A pleasing business and social function of Indiana architectural circles was the annual meeting of the Indiana Chapter, American Institute of Architects, held Saturday, June 22, at the Avalon Country Club, ten miles northeast of Indianapolis up the beautiful Fall Creek Valley and Highlands. It was a setting ideal for a summer meeting removed as it was from the heat of the city.

The session was well attended and the reports submitted by officers and chairmen of the various standing committees indicated that the chapter is alive to its opportunities, is taking an active interest in the problems at hand and is actually sharing in the extensive work being carried on by the Institute. It was shown that many of the members of the Indiana Chapter are serving on important committees of the national architectural organization which in the past few years has developed into a powerful and influential representative body of the profession.

Secretary D. J. Zimmerman made an interesting and enlightening report relative to the Institute's effort to co-operate with the national government in the extensive beautification and systematical development program for the City of Washington. This work will be along the original L'Enfant plan, will involve the expenditure of $150,000,000 and in the end will serve to make Washington, D. C., one of the outstanding capitals of the world.

Mention of advertising was made by Merritt Harrison who suggested that the Indiana Chapter co-operate with the Indiana Building Congress in a campaign of group advertising to advance the interests of the entire state building industry. The idea was somewhat novel as concerned the Chapter, drew close attention, and was favorably received.

Much enthusiasm was aroused among those present by the reports of members who attended the recent annual convention of the American Institute of Architects. This information coming first hand stressed the fact that many of the great architects of the country, those with immense projects on their hands, are giving freely of their time and effort constantly to forward the work of the Institute and through it the interest of the profession. It all carried an appealing urge to those present to buckle down and do their share to carry forward the high standard set by the Institute.

The annual election resulted in the naming of these men: President, Arthur Bohn, Indianapolis; first vice president, D. J. Zimmerman, Indianapolis; second vice president, Karl D. Norris, East Chicago; secretary-treasurer, Warren D. Miller, Terre Haute. Directors, George W. Allen, LaPorte; Herbert Foltz and Merritt Harrison, Indianapolis.

Retiring President George W. Allen thanked the members of the Chapter for the hearty co-operation given him during the past year and expressed his deep appreciation of the aid given him by the various committees. He called attention to the fact that the membership had been enlarged, and that the Chapter had been successful in putting over one big competition as outlined by the A. I. A., and had also lent its effort to the successful enactment of the new Architects Registration Law.

Mr. Bohn in assuming the office of president outlined a progressive program for the year, and especially referred to a hope that the Chapter would be in a position to place before the public of Indiana in an attractive manner the earnest work that the Institute is endeavoring to carry on. He said there was much for the Chapter to do in this State and urged all members to get behind the new administration to make the coming year the greatest in the history of the organization.

NEWS OF THE WEEK

(Continued from Page 5)

STEEL INSURES STRENGTH AND SECURITY

Structural steel framework for the City National Bank & Trust Co. building, in Battle Creek, Mich. General contractor, A. J. DeKoning, Kalamazoo, Mich.; Architects, Fridstein & Co., Chicago, Ill. Steel fabricated and erected by The Rochester Bridge Co., Rochester, Ind.

BANKS MODERNIZE WITH STEEL

The bank building framed with structural steel embodies another of steel's fundamental characteristics—solid, lasting strength. From the first step in steel's manufacture, until its arrival at the job as a numbered unit built to fit into one harmonious whole, the strength and endurance of steel is carefully checked and guarded, just as is the strength of the banking institution for which the lasting steel structure is to be the permanent home. Steel never fails—it can be trusted to be successful in any job, anywhere, at any time.

KOEHRING WEIGH MIX

MATERIALS and water *proportioned by weight*—mixing period accurately timed—the Koehring *Weigh Mix* is the accurate producer of specification concrete!

It's a standard Heavy Duty Koehring mixer with weighing batch hopper and water tank mounted on an auxiliary frame. All operations are controlled from platform.

All aggregate weighed in one hopper—any number of grades weighable without extra equipment. Water weighed on same beam!

Fast discharging *vibrating* hopper permits mixer to operate at full capacity, and self clearing is so accurate that weighing scale always returns to balance. Absolute, easy, one-man operation!

—and of course the Koehring remixing action makes its own contribution to uniform, dominant strength concrete.

WHATEVER you need in Mixers, Cranes, Shovels, Draglines, and other equipment, your phone call to us will bring you quick, complete information.

Sealed Proposals

NEW ROOF
NOTICE TO CONTRACTORS

Bids will be received by the board of trustees of the Indiana State Teachers College, Terre Haute, Indiana, at twelve o'clock noon, Tuesday, July 23, at the Columbia Club, Indianapolis, Indiana, for a new roofing on the Library building.

Bids must be made on form No. 96 prescribed by the state board of accounts and must be accompanied by a certified check equal to 5 per cent of the amount of the bid.

Detailed plans and specifications will be on file in the office of the Registrar of the Indiana State Teachers College, Terre Haute, and in the office of the state board of accounts, statehouse, Indianapolis, Indiana. Additional plans and specifications, together with bidder's blanks for the individual use of the bidder may be secured from Johnson, Miller, Miller & Yeager, 819 Ohio street, Terre Haute, Indiana.

BOARD OF TRUSTEES OF THE INDIANA STATE TEACHERS COLLEGE,
By Helen C. Benbridge, Secretary.
June 29—July 6-13

NOTICE TO CONTRACTORS

Notice is hereby given that the Trustee and Advisory Board of Noble Township, Shelby County, Indiana, will receive bids at the office of the Township Trustee, Geneva, Indiana, until 1 o'clock p. m. of Thursday, July 18, 1929, for the erection and completion of the general construction of a one story Grade School Building to be erected on a site near Geneva, Indiana, and will at the same time and place receive bids for the heating and ventilating, plumbing and sewerage, and electric wiring for the said building. In accordance with the revised plans and specifications prepared therefor by Norman H. Hill, Architect, and adopted by the Trustee and Advisory Board, said plans and specifications now being on file in the office of the Trustee, the Architect and the State Board of Accounts. The estimated cost of such work is $42,000.00.

Separate bids will be received on different portions of the work as follows: General contract, heating and ventilating, plumbing and sewerage and electric wiring. Combination bids of any two or more portions of the work will be considered.

All bids must be in writing on forms prescribed by the State Board of Accounts and sealed and in every respect must conform to the laws of the State of Indiana and to the rules and regulations of any governing State Board of the State of Indiana. The right is expressly reserved to reject any or all bids and to use sufficient time to investigate the bids and the qualifications of the bidders.

Each bid must be accompanied by a certified check equal to five (5) per cent of said bid. These checks must be made payable to Noble School Township, Shelby County, Indiana, and will be held by it as a guarantee of good faith that the said bidder or bidders will enter into contract and execute a surety bond for the full amount of his bid, approved by the Trustee for the due performance thereof, if his bid is accepted. The checks of those bidders who fail to be awarded the

contract will be returned to them when the contracts have been let.

Should the successful bidder or bidders fail to enter into such contract and execute such surety bond, then he or they shall forfeit the amount of said certified check as liquidated damages for such failure for the use and benefit of the proper fund of the School Township.

Copies of the general contract drawings and specifications may be obtained from the office of the architect, Norman H. Hill, 1050 N. Delaware St., Indianapolis, Indiana, and copies of plans and specifications for heating and ventilating, plumbing and electric wiring may be obtained from the office of J. N. Rotz Engineering Company, 704 Merchants Bank Building, Indianapolis, Indiana.

Bidders will be required to deposit $10.00 for each set of plans and specifications, said deposit to be returned to the bidders upon the safe return of the plans and specifications on or before the day for receiving bids.

SCHOOL BUILDING

NOTICE TO CONTRACTORS

Sealed bids will be received by the Board of Trustees of the Indiana School for the Blind at the office of the Board in the present building at North and Pennsylvania Streets, Indianapolis, Indiana, until two o'clock p. m., Wednesday, July 3, 1929, for the completion of the Indiana School for the Blind at 75th Street and College Avenue, Indianapolis, in accordance with Revised Plans and Specifications prepared by and under the supervision of Harrison and Turnock, Architects and Engineers, 500 Board of Trade Building, Indianapolis, said plans now being on file at the office of the Board of Trustees, at the State Board of Accounts and at the office of the Architects and Engineers.

Separate bids will be received upon general, heating, plumbing, boilers, stokers and electrical work.

The right is reserved by the Board to reject any and all proposals.

BY ORDER OF THE BOARD OF TRUSTEES, INDIANA SCHOOL FOR THE BLIND.

June 15-22-29

NOTICE OF SALE OF SCHOOL BONDS

Notice is hereby given that on the 17th day of July, 1929, at 10:00 o'clock A. M., at the office of the Warren Township High School in the town of Bippus, in Huntington County, Indiana, the undersigned Warren School Township by its School Trustee and Advisory Board, will offer for sale and will sell the bonds of said Warren School Township to the highest and best bidder therefor in the total aggregate par value of $25,500.00 as follows, to-wit:

Said bonds shall all be dated July 1, 1929, and shall consist of fifty-one bonds of the par value of $500.00 each and shall be divided into fifteen series, the first thirteen series to consist of three bonds each of the par value of $500.00 each, and the fourteenth and fifteenth series shall consist of six bonds of the par value of $500.00 each. The first series to become due July 1, 1930, and each succeeding series to fall due one year later than the last preceding series until the last of said series falls due on July 1, 1944. Said bonds shall bear interest at the rate of five per cent per annum from date; payable semi-annually on the 1st days of January and July of each year and said bonds and interest thereon evidenced by coupons attached theerto, shall be negotiable and payable at the Bippus State Bank in the Town of Bippus and State of Indiana.

The purpose of said bonds is to provide funds necessary to repair and construct school building and for the construction of a school gymnasium to be used for the educational purposes for said Warren School Township.

Sealed bids will be received by the undersigned and the same must be submitted in writing on or before 10:00 o'clock A. M., on said day and each bid must be accompanied by certified check payable to Clarence A. Huffman, as School Trustee of Warren School Township in a sum not less than $1000.00, and on condition that said sum shall be forfeited as liquidated and agreed damages on failure of such bidder to receive and pay for said bonds on acceptance of his bid, subject, however, to a reasonable time allowed for examination of an abstract of the proceedings preliminary to the issue of said bonds.

The undersigned reserves the right to reject any and all bids.

Done this 25th day of June, 1929.

THOMAS H. POWELL,
GEORGE KNECHT,
SIMON KITT,

As Members of the Township Advisory Board of Warren School Township, Huntington County, Indiana.

CLARENCE A. HUFFMAN,
As School Trustee of Warren School Township, Huntington County, Indiana.

EQUIPMENT DEPRECIATION

Here Is an Item Many Contractors Fail to Take Into Consideration in Estimating

Naturally in estimating work contractors, in order to play safe, must have definite cost foundation from which to figure. To hear some unsuccessful bidders talk one would think the man who landed the job had no conception of costs, had merely guessed at them, taken a chance, "shot the moon," and was headed straight for eternal ruin.

However, in this matter of cost there is one item that is perhaps slighted the most and about which there is the least understanding, it pertains to the depreciation of equipment. In many instances this depreciation is so poorly understood or provided for in bids that it represents a large portion of the losses that occur in the construction industry.

Depreciation should generally be spread over a period of several years. The rate during the earlier years should be greater than the normal flat rate or straight line arrangement. This permits some reasonable leeway in working out the balance in later years. It might even cover a year of idleness.

There are several ways of figuring depreciation that are recognized by the United States Chamber of Commerce and the Federal Income Tax Bureau.

The first is commonly known as the straight line method of depreciation. This consists of estimating the useful life of each piece of equipment in years and charging off a uniform per cent during each year. That is, if a piece of equipment will last four years, 25 per cent is charged as depreciation each year whether the equipment is in use or idle.

The second method of depreciation consists of estimating the units of work which a piece of equipment will do before it becomes useless or worn out. The initial cost is then divided by the number of units of work to find the depreciation cost due to one unit of work. These units may be tons, cubic yards, hours, or any other suitable unit of measure. Thus if a concrete mixer will place thirty miles of paving work before it is worked out, one-thirtieth of its initial cost should be charged to depreciation on each mile of pavement.

The job basis of depreciation means that the difference in the initial cost and the salvage value of the equipment at the end of the job should determine the amount chargeable to the job. This is especially applicable to special equipment purchased for a particular job.

If a contractor will thoroughly recognize one of these three methods he will find that when he needs new equipment to replace old that he has funds ample to do it with.

A number of years ago there was a committee composed of contractors, engineers and machinery people who met in quite extended sessions to devise a depreciation schedule. While that schedule was not perfect by any means, it had a very beneficial effect. The writer fully believes that another such getting together would be of mutual benefit. One thing is certainly true, that each piece of work should bear its proper share of depreciation, otherwise the contractor is robbing his capital stock to pay operating expenses. THE IRRESPONSIBLE AGAIN

Wisconsin Builders Have Their Troubles Also

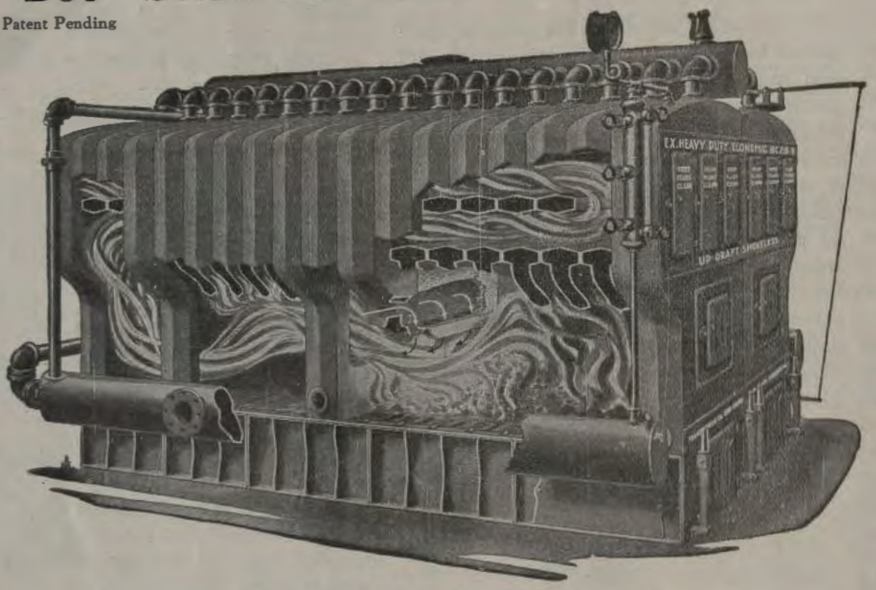
Here and there, all over the country sounds the complaint about the irresponsible contractor and the urge to purge the building field of his ilk.

First it is heard in New York, then California, in Ohio, in Texas, and, to it all is added this latest chirp from a contractor in Wisconsin, who writes in the Master Builder, Appleton, Wis., as follows:

"I would suggest that a campaign be launched to educate the builder and the public in general. We know that there are undesirable contractors in the construction business and the people have a right to know about them. A man who will rob an innocent home builder is worse than a bank robber or a safe blower.

"I believe that if the public knew of the unscrupulous contractors in this industry they would help drive them out of business. Usually the innocent builder gets one kind of specification which reads—'All woodwork to be filled shellac, two coats of varnish and ducco, rubbed to a dull finish.' The subcontractor reads—one coat of acid stain and one coat of flat finish. Walls are supposed to have three coats of oil and lead, stippled, motteled, or textone or oil plastic. What they usually get is one coat of glue, size 1 coat of flat, and the side walls are stained and dabbed with a rag. The plastic, a mixture of whiting and plaster, is dabbed on with a rag or sponge, and stained.

"You can't blame the poor painter for skimping. He has to live somehow. It's the alleged builder who rides about in a limousine, and who has never put two boards together in his life who figures $350 to $375 for painting a five room bungalow. The subcontractor gets as low as $180 to $200 out of a job of this kind. I know of hundreds who have been fooled in this way. What is true of the painting business also is true in other crafts in the building line, and everyone who intends to build should know this.



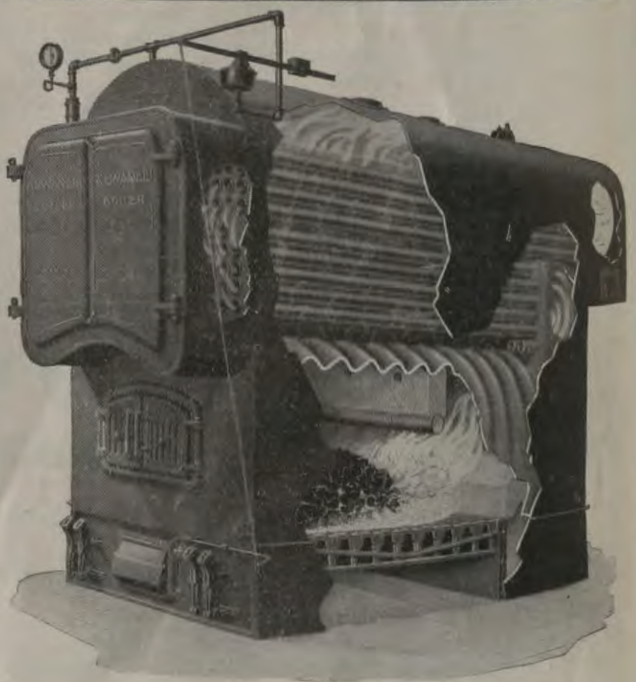
"The time has come when something must be done to protect the honest contractor. Many, like myself, who have worked at the business for more than thirty years, have learned to do good work and take pride in our work. We are too old to be crooked. What this country needs is a higher respect for honesty.

"Yours very truly,

"E. G. NEUMAN."

"B60" Series Hot Blast Smokeless Boiler

Patent Pending



Prox Boilers are equipped with a top header, which is a positive steam separator, assures dry steam carrying maximum Number of B. T. U.'s. Water boiling up will not go into main and cause water knock, no matter how hot a fire may be in any part of boiler. A side connection to side headers. This is drain to rear of boiler discharges all water and condensatoon to side headers. This is only one of the many superior features of Prox Boilers.

Vol. XI INDIANAPOLIS, INDIANA, JULY 6, 1929 No. 15

PRACTICE OF EXTENDING UNWARRANTED CREDIT PROMISCUOUSLY A VITAL EVIL IN THE BUILDING FIELD

To Rectify the Custom Should Be the Goal of All Who Have the Best Interests of the Industry at Heart

Building men generally, especially those who are alert to the future of the industry, realize that conditions are not what they should be, and that it behooves those who have the welfare of the business at heart to stand together, buckle down and diagnose the situation in an effort to remedy things. All are agreed that the subject is worthy of serious consideration and study and must be gone into.

It is admitted that competition has increased at an alarming rate in the past decade or more and is rampant today, a situation that has had a tendency to brush aside competency, discount responsibility, encourage price cutting, and demoralize contractural effort. Price seems to be paramount as against service and execution. All of which has raised the bars against the competent operator and in turn lowered them for the builder who overlooks the fact that reputation and responsibility are involved in carrying on.

However, contractors, real builders, and those associated with them, architects, engineers, material manufacturers, supply men, sub-contractors and those who finance building projects have reached the conclusion that expanded and extended credits as practiced in the building construction field have had an influential effect in bringing about conditions as they exist today. An example of the awakening that has come to builders was evidenced recently at a meeting of the Indianapolis Building Congress when the entire evening was given over to serious consideration of what loose credits have meant to the building industry all over the country and the havoc that has been wrought through the leniency thus practiced.

That Indianans and the Congress are on the right track, and are in step with the rest of the country is clearly demonstrated by this article which appeared in the June issue of the Master Builder, Appleton, Wis.:

"Every trade journal published in behalf of the building industry, every convention program, and all heart to heart conferences of building men and contractors have published, discussed, and drifted on to the subject of the irresponsible contractor, false credit, and the diabolical lien laws. It cannot be avoided, because that prevailing condition is one of the greatest barriers encountered in the contractor's voyage through his career. Many of the discussions have been quite technical and thus lost their true value. At the Ninth Annual Convention of the Associated General Contractors of America, Leonard C. Wason, Boston, Mass., presented the situation in so true to life an illustration that its message is forcefully carried home:

'Briefly stated a constructor obtains more credit than he is entitled to in a number of states by lien laws that are unwise, judged from the standpoint of the community's interest, which almost automatically permit the vendors of labor and material to hold the owner of a building project responsible for the direct payment of their accounts instead of his constructor who ordered the labor and material.

'The constructor also receives too much credit due to the present method of advertising and awarding contracts with no safeguard except a surety bond. It is a well known fact that most surety companies frequently issue bonds to firms who are known in advance to be doubtful risks.

'Equipment companies sell on much too liberal terms, with little or no money down and long installment payments.

'Bankers are often ignorant of how to correctly determine the facts necessary to pass intelligently on loans to constructors and so give too much credit.

'The first case is sometimes called **automatic** credit, while the last three cases are termed **false** credit.

'To illustrate how it applies, let us assume a very probable case. A young man comes out of school, be it high school or college, and goes to work for a constructor. He is an unusually bright boy with pleasant manners, good character, honest, and with all the graces which make him popular, pleasing and agreeable. He is industrious. He is sent to work on some construction work in the field as a timekeeper. Not being a large job and he being able to master his duties quite promptly, others are added. He proceeds to accept materials, learns their quality and then to check accuracy of the bill. By and by he is given the job of ordering some of the minor materials. He becomes acquainted with all the material men with whom his employer deals.

'There are several days during the life of the job when some gang boss or foreman will be missing, it is not possible to replace him on the spur of the moment, the boy has not been overloaded with work as yet so he is given the job of bossing various gangs for a few hours.

'This continues for two or three years. He goes through various departments, meets the surety men, meets the sub-contractors, the principals, of course he meets the foremen of the sub-contractors. He gets pretty well acquainted all around, but has never had the opportunity to take responsible charge of the work.

'Because he has shown such good results, he is promoted to the main office. There he does clerical work, helps the bookkeeper, and later helps to make estimates. It takes him some little time to learn to scale plans and to extend quantities, but he master these. In his clerical work and his helping of the bookkeeper he goes to the bank weekly, makes deposits; draws the pay-roll and acquires the habit of very politely bowing to the president of the bank as he goes by his desk, and finally makes his acquaintance.

'He has no dependents, he is thrifty, so he is saving money and deposits it in this bank and gradually builds up a fair account as commercial accounts go for such a man, about $2,500.

'After four or five years of this, there comes a depression in business. The boss is out of work. He says in all sincerity that he is sorry, but he can not afford to

keep this young man, so lets him go. The boy says, "With all of the experience and acquaintances I have, it is best for me to stay in the building business."

'He goes around to the other builders in the community and tries to get a job. He gets the answer, 'Sorry, we are hard hit for work; it's all we can do to carry our regular men.' The boy scratches his head, thinks it over and decides to become a constructor.

'About this time there is a letting of some small public work. He bids off a $50,000 job and starts. Here we have a full-fledged irresponsible constructor. He obtains the contract; price is the only thing considered. The public officials who have the awarding of the contract do not give a rap who the bidder is if he gives a bond, and it is so very easy to get a bond, anyone can, so he does.

'This young man qualifies for Integrity 100%. He cannot quality for Skill as he has never had responsible charge of work, nor any business experience as the principal. He is in this respect a mere beginner. Neither can he qualify for Responsibility because his capital and credit are woefully inadequate for his actual necessities.

'He starts. He has to pick up a brand new, green organization. Even if some of the elements are well trained, they do not work well together at first. Costs mount, more than he expected, and he runs into financial difficulty. He gets over his first hard sledding because an equipment salesman rushed him and sold him equipment on easy terms, nothing down, paying so much a month, postponed until the second month because the salesman said 'you need the money to get started,' and later the material men say, 'Oh, sure! We will take care of you, we will sell you anything.' They then protect their lien rights against the owner and never have a worry.

'The banker knows the young man is a good moral risk, that he has $2,500 in the bank and this satisfies the financial end as he has not even a remote idea how to determine his actual requirements and must not display this ignorance. Everything looks rosy.

'Finally the public authorities bring a law suit against the bonding company. That is a brief statement. I have picked out a high grade man to show it does not depend on his integrity alone, but depends as much on his resources and his experience. Of course, in time he may have both, but he does not have them when he starts. He started above where he should have started. If he had started within his own proper limit of experience and finance, say a simple $10,000 structure, he would be a responsible contractor. As it is he is an irresponsible one.

'What is the effect upon us general constructors and the investors in construction? It is injurious. He takes work away from general constructors who are responsible, work they ought to have. The responsible constructor with a trained organization and such experience that he never does a thing wrong and only makes one motion instead of two when doing a thing right; can actually execute a contract cheaper than the irresponsible has bid it off. He also completely fulfills the contract and maintains the time schedule. But he is not fool enough to take it on an extremely low and narrow margin as a rule.

'In my own experience I have known of the owners taking competitive bids, rejecting them, giving my company the work on a cost plus a fixed fee basis and the work has been completed below the lowest. bid. That has happened on several occasions. That is the reason I am saying that a man with a trained organization that makes no false moves can beat out the irresponsible bidder in a great majority of cases. So it is not selfishness on the part of the general constructors in trying to eliminate the irresponsible. It is in the interest of the owner.

'Part of our purpose should be educate the engineers and public officials to understand what the excess cost of accepting a low bid from an irresponsible bidder who will probably default means. Cost comes in through delay in completion which ties up considerable money for which there is no return by the use of the improvement. There may be a law-suit with the bonding company. There may be reconstruction of defective work, etc. We can set these figures all out in such a logical, convincing way that the public officials and the engineer can say to the public, when they are criticized for not accepting the low bid, 'All things considered, it is not a low bid and here are the reasons and figures.'

'In this way I believe we can help overcome the problem of over-expansion. It cannot be done by legislation; it has to be done by education.

'The most important remedy that I can see is first to educate ourselves. Just where is the line of division between the responsible and the irresponsible constructor? If you are away above the line you know you are responsible, but where is the division line? When we work that out for ourselves and establish it for different sizes of contracts, we are educating ourselves; at the same time we are not keeping our light under a bushel, but we are putting it on a candle stick so that it lights the whole community. The designers—architect or engineer—are being educated and through them the public officials and also the general investing public.

'Estimates cost the constructor anywhere from fifty dollars to five thousand dollars each. For a complicated building it is safe to say it may cost him twenty-five hundred dollars in cash to make an estimate and bid. When we prove this from a number of actual cases I think it should be easy to convince the designer and his client that by investing our own money to this extent in the client's interest, we are buying the privilege, yes the right—of being given a fair and square deal in the award of contract. We are not always given a fair and square deal, partly because not one owner in a thousand knows what it costs in effort and actual money for a constructor make up a bid.

'The bidder who cannot quality in plant, cash or credit for the given case is irresponsible. I say the young man in the assumed case is irresponsible. He has a fifty thousand dollar contract and $2,500 in money. He may be able to get credit from his bank to the extent of four or five thousand dollars. His plant ordinarily would cost him about 6% on a building, 10% on a dam, and something else on a concrete highway, if he buys it outright and pays for it. Then what is he going to do for his payroll? On a plain type of building construction if the payments come regularly once a month and if you stave off all your material bills until you have received your estimate from the owner and pay in cash only pay rolls, expressages, etc., a constructor can execute a contract equal to ten times his free cash. In this particular case he needs five thousand dollars cash to handle his work efficiently from month to month. As he has not got it, he is irresponsible.

'The banker does not know that, either. Perhaps a lot of us have not analyzed our own records to see how much cash we have been tying up in contracts before they are finished.
